the same laws should be invoked against him, and he must be punished with greater severity than his juniors: that is, he is to be stripped of his right to exercise any authority over the young.

The Guardians of the Laws should keep a sharp eye on these offenses and try to stop them being committed at all; failing that, they must see that the proper penalties are inflicted.

e No one will ever make a commendable master without having been a servant first; one should be proud not so much of ruling well but of serving well—and serving the laws above all (because this is the way we serve the gods), and secondly, if we are young, those who are full of years and honor. It is vital that everyone should be convinced that this rule applies to us all. The next point, then, is that when someone who has joined the Country-Wardens gets to the end of his two years, he ought to be no stranger to a meager daily ration of uncooked food. In fact, after being selected, the groups of twelve assistant Wardens must assemble with the
763 five officers and resolve that, being servants, they will not possess other servants and slaves for themselves, nor employ the attendants of other people (the farmers and villagers) for their own private needs, but only for public tasks. With that exception, they must expect to double as their own servants and fend for themselves; and on top of all that they must reckon to investigate the entire country, summer and winter, in arms, to
b protect and get to know every district in succession. Everyone should be closely familiar with his own country: probably no study is more valuable. This is the real reason why the youths must go in for hunting with dogs, and other types of chase—quite apart from the pleasure and profit that everyone gets out of such activities.

So much for these 'secret-service men' or 'Country-Wardens' (call them
c what you will), and their regimen—a regimen into which everyone who means to play his part in keeping his country safe must throw himself heart and soul.

The next election on our list was that of the Market-Wardens and City-Wardens. There are to be three of the latter, who will divide the twelve sections of the city into three groups, and like their counterparts (the Country-Wardens), will look after the roads, both the streets within the city boundaries and the various routes that extend into the capital from
d the country; and they must also supervise the buildings, to see that they are constructed to the statutory standards. In particular, they must ensure that the water which the Guards-in-Chief have transmitted and sent on to them in good condition reaches the fountains pure and in sufficient quantities, so that it enhances the beauty and amenities of the city. So these officials too must be men of some caliber, with time to go in for public affairs, which means that every citizen nominating City-Wardens must confine his choice to members of the highest property-class. When
e they have held the election and produced a short list of six candidates with the most votes, the officials responsible are to select three of them by lot; and these, after scrutiny, should hold office in accordance with the laws provided for them.

Next, five Market-Wardens must be elected from the first and second property-classes. In general, their election should be conducted as for the

City-Wardens: ten should be selected from the list of candidates by voting, and then five selected by lot, who after due scrutiny should be appointed to office. (Voting is compulsory for all in every election, and everyone who fails in his duty and is denounced to the authorities should be fined 764
fifty drachmas and get the reputation of being a scoundrel. Attendance at the assembly (the general meeting of the state) is to be optional, except for members of the first and second property-classes, who will be fined ten drachmas if their absence from such a meeting is proved. But the third and fourth classes will not be forced to attend and should not be subject to any penalty unless the authorities, for some pressing reason, instruct everyone to come.) To get back to the Market-Wardens: they are to maintain b
due order in the market, and look after the temples and fountains, to see that no one damages them. They must punish anyone who commits an offense, a slave or foreigner by whipping him and putting him in chains; but if a native citizen misbehaves himself in this way, the Market-Wardens should be authorized to decide the case on their own and fine the culprit up to a hundred drachmas, the limit being increased to two hundred if they sit in association with the City-Wardens. In their own sphere, the c
City-Wardens too should have the same power of fining and punishing, and inflict fines up to one mina on their own, and up to two minas in association with the Market-Wardens.

The right thing to do next will be to appoint officials in charge of (A) culture and (B) physical training—two categories of them in each case, one (1) to handle the educational side and the other (2) to organize competitions. By (1) 'education officials' the law means superintendents of gymnasia and schools, who see that they are decently run, supervise the d
curriculum and organize such related matters as the attendance and accommodation of the boys and girls. (2) 'Officials in charge of competitions' means judges of competitors in athletics and contests of the arts (there being here again two categories (AB) of officials, one for the arts, one for athletics). (B2) Men and horses in athletic contests can have the same judges, but (A2) in the arts, choruses should properly have (A2a) one set of judges, while solo dramatic performances (given by reciters of poetry, e
lyre-players, pipe-players and such people) ought to have another (A2b). So I suppose a good start will be to select (A2a) the authority to supervise children, men and girls as they enjoy themselves in choruses by dancing and every other type of cultural activity. One official, who is to be not less than forty years old, will suffice, and one of not less than thirty (A2b) will 765
also be enough to present the solo performances and give an adequate decision between the contestants. The Chief Organizer of the Choruses (A2a) must be chosen in some such way as this. All those who are keen on such things should attend the election meeting and be liable to a fine if they don't (this is a point for the Guardians of the Laws to decide), whereas others who do not wish to attend should not be compelled. In b
proposing their choice the electors should confine themselves to the experts, and in the scrutiny there must be only one reason for accepting or rejecting

the candidate the lot has favored: that he is experienced or inexperienced as the case may be. One of the ten nominees with the most votes must be selected by lot, scrutinized, and be in charge of the choruses for the year according to law. Similarly with the year's entrants for solo performances and combined pieces on the pipes: only after the application of the same criterion should the candidate (A2b) favored by the lot take charge of them and decide between them, having referred the decision in his own case to
c his judges. Next, (B2) Umpires for athletic contests and exercises of horses and men must be chosen from the second and also the third property-class; it will be compulsory for members of the first three classes to take part in the election, but the lowest class may be let off without a fine. The Umpires should number three, chosen by lot from the twenty candidates who head the poll, and duly sanctioned by the scrutineers.

d If anyone is judged and found wanting in the scrutiny after being drawn by lot for any office, another person must be chosen in his place by the same methods, and his scrutiny conducted in the same way.

The remaining official in this field is the director of the entire education of the boys and girls. Here too there should be one official in charge under the law. He must be not younger than fifty years old, and the father of legitimate children—preferably both sons and daughters, though either
e alone will do. The chosen candidate himself and those who choose him should appreciate that this is by far the most important of all the supreme offices in the state. Any living creature that flourishes in its first stages of growth gets a tremendous impetus towards its natural perfection and the final development appropriate to it, and this is true of both plants and
766 animals (tame and wild), and men too. Man is a 'tame' animal, as we put it, and of course if he enjoys a good education and happens to have the right natural disposition, he's apt to be a most heavenly and gentle creature; but his upbringing has only to be inadequate or misguided and he'll become the wildest animal on the face of the earth. That's why the legislator should not treat the education of children cursorily or as a secondary matter; he should regard the right choice of the man who is going to be in charge of the children as something of crucial importance, and appoint
b as their Minister the best all-round citizen in the state. So all the officials except the council and members of the Executive[5] should meet at the temple of Apollo and hold a secret ballot, each man voting for whichever Guardian of the Laws he thinks would make the best Minister of Education. The one who attracts the largest number of votes should be scrutinized by the officials who have elected him, the Guardians of the Laws standing
c aside. The Minister should hold office for five years, and in the sixth he should be replaced by his successor after an election held under the same rules.

If any public official dies in office and there are more than thirty days of his tenure left to run, the officials concerned must follow the same

5. See 758a ff.

procedure as before and appoint a replacement. If a guardian of orphans dies, the relatives on both the mother's and the father's side (as far as the children of first cousins), provided they are living in the state, should appoint a successor within ten days, or be fined a drachma for every day d
they let pass without appointing the children's new guardian.

Of course, any state without duly established courts simply ceases to *be* a state. If a judge is silent, and (as in arbitration) has no more to say than the litigants in a preliminary hearing he'll never be able to come to a satisfactory decision on the cases before him. That's why a large bench finds it difficult to return good verdicts—and so does a small one, if its members are of poor caliber. The point in dispute between the parties e
must always be made crystal clear, and leisurely and repeated interrogation over a period of time helps a lot to clarify the issues. That is the justification for making litigants bring their charges initially before a court of neighbors, who will be their friends and understand best the actions which provoke 767
the dispute. If a litigant is dissatisfied with the judgment of this court, he may apply to a second, but if the first two courts are both unable to settle the argument, the verdict of the third must close the case.

In a sense, to establish a court is to elect officials. Every official, you see, sometimes has to set up as a judge as well; and a judge, although strictly he has no official position, becomes in a way an official of considerable importance during the day on which he sits in judgment and gives his verdict. So on the assumption that judges too are officials, let's specify b
what judges will be appropriate, the disputes they will decide, and how many should sit on each case. The court appointed by the common choice of the litigants themselves for their own private cases should have absolute authority. Cases may be brought before the other courts for two reasons: one private person may charge another with having done him wrong, and bring him to court so that the issue can be decided; or someone may believe that one of the citizens is acting against the public interests and wish to come to the community's assistance. Now we must specify the character c
and identity of the judges.

First, let's set up a common court for all private persons who are contesting an issue with each other for the third time. It is to be formed in some such way as this. All officials whose tenure lasts for a year or longer should assemble in a single temple on the day just before the new year opens in d
the month after the summer solstice; then, after swearing to the god, they must offer him their choicest fruit, so to speak: each board of officials should contribute one judge, the man who appears to be the outstanding member of his board and seems likely to judge the cases of his fellow citizens during the coming year in the best and most god-fearing manner. When the judges have been chosen, their scrutiny should be conducted before their very electors, and if any one of them is rejected, a replacement should be chosen under the same rules. Those who pass the scrutiny are to sit in judgment on the cases of the litigants who refuse to accept the decision of the other courts. They are to vote openly, and it will be e

compulsory for the Councillors and the other officials who elected the judges to watch and listen to the trials; others may attend if they wish.

If anyone accuses a man of having knowingly returned a false verdict, he must go to the Guardians of the Laws to prefer the charge.

10. If the accused is found guilty as charged,
he will have to pay to the injured party half the damages awarded; if he is thought to deserve a stiffer punishment, his judges must calculate the additional penalty he should suffer or additional fine he ought to pay to the state and his prosecutor.

768 As for charges of crimes against the state, the first need is to let the man in the street play his part in judging them. A wrong done to the state is a wrong done to all its citizens, who would be justifiably annoyed if they were excluded from deciding such cases. But although we should allow the opening and closing stages of this kind of trial to be in the hands of the people, the detailed examination should be conducted by three of the highest officials, chosen by agreement between prosecutor and defendant. If they are unable to reach agreement themselves, the council should decide between their respective choices.

b Everyone should have a part to play in private suits too, because anyone excluded from the right to participate in trying cases feels he has no stake in the community whatever. Hence we must also have courts organized on a tribal basis, where the judges, being chosen by lot as occasion arises, will give their verdicts uncorrupted by external pressures. But the final decision in all these cases is to be given by that other court which deals
c with litigants who cannot settle their case either before their neighbors or in the tribal courts, and which for their benefit has been made (we claim) as incorruptible a court as can be assembled by human power.

So much for our courts (and we admit that to call their members either 'officials' or 'non-officials' without qualification raises difficulties of terminology). We've given a sort of superficial sketch, which in spite of including a number of details, nevertheless omitted a good many, because a better place for presenting an exact legal procedure and classification of suits
d will be towards the end of our legislation. So this theme may be dismissed till we are finishing off. We have already explained most of the rules for establishing official posts, but we still can't get a completely clear and exact picture of every individual detail of the entire constitutional organization of the state: for that, we need to take every single topic in proper sequence and go through the whole subject from beginning to end. So far, then,
e we've described the election of officials, and that brings us to the end of our introduction. Now to start the actual legislation: there's no need to postpone or delay it any longer.

CLINIAS: I very much approve of your introduction, sir, and I'm even more impressed by the way you've rounded it off so that it leads into the opening of the next theme.

ATHENIAN: So far, then, these ideas we old men have been tossing about 769
have given us splendid sport.

CLINIAS: Splendid indeed, but I fancy you really meant they were 'a splendid challenge for men in their prime of life'.

ATHENIAN: I dare say. But here's another point. I wonder if you agree with me?

CLINIAS: What about? What point?

ATHENIAN: You know how painting a picture of anything seems to be a never-ending business. It always looks as if the process of touching up b
by adding color or relief (or whatever it's called in the trade) will never finally get to the point where the clarity and beauty of the picture are beyond improvement.

CLINIAS: Yes, I too get much the same sort of impression, though only from hearsay—I've never gone in for that sort of skill.

ATHENIAN: Well, you haven't missed anything. But we can still use this passing mention of it to illustrate the next point. Suppose that one day somebody were to take it into his head to paint the most beautiful picture c
in the world, which would never deteriorate but always improve at his hands as the years went by. You realize that as the painter is not immortal, he won't achieve anything very permanent by lavishing such care and attention on his picture unless he leaves some successor to repair the ravages of time? Won't his successor also have to be able to supplement deficiencies in his master's skill and improve the picture by touching it up?[6]

CLINIAS: True.

ATHENIAN: Well then, don't you think the legislator will want to do d
something similar? First of all he'll want to write his laws and make them as accurate as he can; then as time goes on and he tries to put his pet theories into practice—well, do you think there's any legislator so stupid as not to realize that his code has many inevitable deficiencies which must be put right by a successor, if the state he's founded is to enjoy a continuous e
improvement in its administrative arrangements, rather than suffer a decline?

CLINIAS: Yes, I think—indeed I'm sure—that this is the sort of thing any legislator will want to do.

ATHENIAN: So if a legislator were able to discover a way of doing this—that is, if by instruction or pointing to concrete examples he could make someone else understand (perfectly or imperfectly) how to keep laws in good repair by amending them—I suppose he'd never give up explaining his method until he'd got it across?

CLINIAS: Of course. 770

ATHENIAN: So isn't this what you two and I ought to be doing now?

CLINIAS: What do you mean?

ATHENIAN: Now that we (in the evening of life) are on the point of framing laws, for which we have guardians already chosen (our juniors),

6. Deleting *eis to prosthen* in c6.

oughtn't we to combine our law-giving with an attempt to turn *them* into law-'givers' as well as law-'guardians', as far as we can?

b CLINIAS: Of course we ought, assuming we're up to it.

ATHENIAN: Anyhow, we ought to try, and do our level best.

CLINIAS: Certainly.

ATHENIAN: Let's address them as follows: 'Colleagues and protectors of our laws, we shall—inevitably—leave a great many gaps in every section of our code. However, we shall certainly take care to outline a sort of sketch of the complete system with its main points, and it will be your c job to take this sketch and fill in the details. You ought to hear what your aims should be when you do this. Megillus and Clinias and I have mentioned it to each other more than once, and we are agreed that our formula is a good one. We want you to be sympathetic to our way of thinking and become our pupils, keeping in view this aim which the three of us are unanimous a giver and guardian of laws should have. The central point on which we agree amounted to this. "Our aim in life should be d goodness and the spiritual virtue appropriate to mankind. There are various things that can assist us: it may be some pursuit we follow, a particular habit, or something we possess; we may get help from some desire we have or some opinion we hold or some course of study; and all this is true of both male and female members of the community, young or old. Whatever the means, it's this aim we've described that we must all strain every muscle to achieve throughout our lives. No man, whoever he is, e should ever be found valuing anything else, if it impedes his progress—not even, in the last resort, the state. Rather than have the state tolerate the yoke of slavery and be ruled by unworthy hands, it may be absolutely necessary to allow it to be destroyed, or abandon it by going into exile. All that sort of hardship we simply have to endure rather than permit a change to the sort of political system which will make men worse." This, then, is the agreed statement; now it's up to you to consider this double 771 aim of ours and censure the laws that can do nothing to help us; but you must commend and welcome the effective ones with enthusiasm, and cheerfully live as they dictate. You must have no truck with other pursuits which aim at different "goods" (as people call them).'

The best way to start the next section of our code will be to deal with matters of religion. First, we should go back to the figure of 5040 and b reflect again how many convenient divisors we found both in this total and its subdivision the tribe (which is one-twelfth of the total, as we specified, i.e., exactly the product of twenty-one multiplied by twenty). Our grand total is divisible by twelve, and so is the number of persons in a tribe (420) and in each case this subdivision must be regarded as holy, a gift of God, corresponding to the months of the year and the revolution of the universe. This is exactly why every state is guided by innate intuition to give these fractions the sanction of religion, though in some cases the divisions have been made more correctly than in others and the religious c backing has proved more successful. So for our part we claim that we had

every justification for preferring 5040, which can be divided by every number from one to twelve, except eleven (a drawback that's very easily cured: one way to remedy it is simply to omit two hearths). The truth of this could be demonstrated very briefly in any idle moment. So let's trust d
to the rule we've just explained, and divide our number along those lines. We must allocate a god, or child of a god, to each division and subdivision of the state and provide altars and the associated equipment; we must establish two meetings per month for the purposes of sacrifice, one in each of the twelve tribes into which the state is divided, and another in each of the twelve local communities that form the divisions of each tribe. This arrangement is intended to ensure, first, that we enjoy the favor of the gods and heaven in general, and secondly (as we'd be inclined to stress[7]) that we should grow familiar and intimate with each other in every kind of social contact.

You see, when people are going to live together as partners in marriage, e
it is vital that the fullest possible information should be available about the bride and her background and the family she'll marry into. One should regard the prevention of mistakes here as a matter of supreme importance—so important and serious, in fact, that even the young people's recreation must be arranged with this in mind. Boys and girls must dance 772
together at an age when plausible occasions can be found for their doing so, in order that they may have a reasonable look at each other; and they should dance naked, provided sufficient modesty and restraint are displayed by all concerned.

The controllers and organizers of the choruses should be in charge of all these arrangements and maintain due order; and in conjunction with the Guardians of the Laws they will settle anything we leave out. As we said, it's inevitable that a legislator will omit the numerous details of such b
a topic; those who administer his laws from year to year will have to learn from experience and settle the details by annual refinements and amendments, until they think they've made the rules and procedures sufficiently precise. In the case of sacrifices and dances, a reasonable and adequate period to allow for experiment, in general and in detail, will be ten years. So long as the original legislator is alive, the various officials c
should bring him into the consultations, but when he is dead they must use their own initiative in putting up to the Guardians of the Laws proposals for remedying the deficiencies in their respective spheres. This process should continue until every detail is thought to have received its final polish. After that, they must assume that the rules are immutable, and observe them along with the rest of the code which the legislator laid down and imposed on them originally. Not a single detail should be altered, if they can help it; but if they ever believe that the force of circumstances has become irresistible, they must consult all the officials, the entire citizen d
body and all the oracles of the gods. If the verdict is unanimously in favor,

7. See 738b–e.

then they may amend, but never in any other conditions whatever; the law will be that the opposition must always win the day.

To resume, then: when a man of twenty-five has observed others and been observed by them and is confident that he has found a family offering someone to his taste who would make a suitable partner for the procreation
e of children, he should get married, and in any case before he reaches thirty. First, however, he ought to hear the correct method of trying to find a suitable and congenial partner. As Clinias says, the appropriate preface should stand at the head of every law.

CLINIAS: Well reminded, sir—and at just the right moment in our conversation, I fancy.

ATHENIAN: Quite so. 'My boy,' let's say to this son of a good family,
773 'you must make a marriage that will be approved by sensible folk. They will advise you not to be over keen to avoid marrying into a poor family or to seek to marry into a rich one; other things being equal, you should always prefer to marry somewhat beneath you. That will be best both for the state and the union of your two hearths and homes, because it is infinitely better for the virtue of a man and wife if they balance and complement each other than if they are both at the same extreme. If a man
b knows he's rather headstrong and apt to be too quick off the mark in everything he does, he ought to be anxious to ally himself to a family of quiet habits, and if he has the opposite kind of temperament he should marry into the opposite kind of family. One general rule should apply to marriage: we should seek to contract the alliance that will benefit the state, not the one that we personally find most alluring. Everyone is naturally drawn to the person most like himself, and that puts the whole state off
c balance, because of discrepancies in wealth and character, and these in turn generally lead, in most states, to results we certainly don't want to see in ours.'

If we give explicit instructions in the form of a law—'no rich man to marry into a rich family, no powerful person to marry into a powerful house, the headstrong must be forced to join in marriage with the phlegmatic and the phlegmatic with the headstrong'—well, it's ludicrous, of course,
d but it will also annoy a great many people who find it hard to understand why the state should be like the mixture in a mixing-bowl. When you pour in the wine it seethes furiously, but once dilute it with the god of the teetotalers, and you have a splendid combination which will make you a good and reasonable drink. Very few people have it in them to see that the same principle applies to the alliance that produces children. For these reasons we are forced to omit such topics from our actual laws. However, we must resort to our 'charms'[8] and try to persuade everybody
e to think it more important to produce well-balanced children than to marry his equal and never stop lusting for wealth. Anyone who is set on enriching

8. See 659e.

himself by his marriage should be headed off by reproaches rather than compelled by a written law.

So much for marriage: these exhortations should be added to our previous account of how we should become partners in eternity by leaving a line of descendants to serve God forever in our stead.[9] A correctly composed 774
preface would have all that and more to say about the obligation to marry.

11. If anyone disobeys (except involuntarily), and unsociably keeps himself to himself so that he is still unmarried at the age of thirty-five,
he must pay an annual fine: one hundred drachmas if he belongs to the highest property-class, seventy if to the second, sixty if to the third, and thirty if to the fourth; the sum to be consecrated to Hera. b

12. If he refuses to pay his annual fine,
his debt must be increased ten times.

(The fine is to be collected by the treasurer of the goddess.

13. If he fails to collect it,
he will have to owe the sum himself.

Every treasurer must give an account of himself in this respect at the scrutiny.) So much for the financial penalty to be paid by anyone refusing to marry, but

12. (cont.)
he should also be barred from receiving the respect due to him from his juniors, none of whom should ever readily take the slightest notice of him. If the bachelor tries to chastise a man, everyone should take the victim's side and protect him.

14. If a bystander fails to give the victim help, c
the law should see that he gets the reputation of being a rotten, lily-livered citizen.

We've already discussed dowries,[10] but we ought to repeat that even if the poor do have to marry and give in marriage on limited resources, it will not affect their prospects of a long life one way or the other, because in this state no one will go without the necessities of life. Nor will wives be so inclined to give themselves airs, and their husbands will be less humiliated by kowtowing to them for financial reasons. If a man obeys d
this law, so much to his credit.

15. If he does not, and gives or receives more than fifty drachmas for the trousseau in the case of the lowest property-class (or more than a hundred or a hundred and fifty or two hundred according to class),

9. See 721b–d.

10. See 742c.

he must owe as much again to the treasury, and the amount given or received must be dedicated to Hera and Zeus.

e 16. The treasurers of these gods are to exact these sums in the same way as we said the treasurers of Hera had to collect the fines in every case of refusal to marry,
or pay out of their own pockets.

The right to make a valid betrothal should rest initially with the bride's father, secondly with her grandfather, thirdly with her brothers by the same father. If none of these is available, the right should belong to the relatives on the mother's side in the same order. If any exceptional misfortune occurs, the nearest relatives shall be authorized to act in conjunction with the girl's guardians.

775 That leaves us with the pre-marriage sacrifices and any other relevant rites that should be performed before, during or after the wedding. A citizen should ask the Expounders about these matters, and be confident that if he does as they tell him, everything will be in order.

As for the wedding-feast, neither family should invite more than five friends of both sexes, and the number of relatives and kinsmen from either side should be limited similarly. No one should incur expense beyond his means: that is, no more than a mina in the case of the wealthiest class,
b half a mina for the next and so on down the scale according to class. Everyone should commend the man who obeys the regulation, but

17. The Guardians of the Laws must chastise the disobedient as a philistine who has never been trained to appreciate the melodies[11] of the Muses of marriage.

To drink to the point of inebriation is improper whatever the place (except at the feasts of the god who made us the gift of wine), and it's dangerous too, especially if you want to make your marriage a success. On the day of their wedding particularly, when they are at a turning-point
c in their lives, bride and groom ought to show restraint, so as to make as sure as they can (it being practically impossible to tell the day or night in which by the favor of God conception will take place) that any child they may have should have parents who were sober when they conceived him. Apart from that, children should not be conceived when the parents' bodies are in a state of drunken relaxation; the fetus should be compactly formed and firmly planted, and its growth should be orderly and undisturbed. But when he's drunk a man reels about all over the place and bumps into
d things, and a raging passion invades his body and soul; this means that as a sower of his seed a drunkard will be clumsy and inefficient, and he'll produce unbalanced children who are not to be trusted, with devious

11. 'Nomes': the same pun as in 700b, 722d–e.

characters, and in all probability with misshapen bodies too. That's why all the year round, throughout his life (but particularly during the age of procreation), a man must take great care to do nothing to injure his health, if he can help it, and nothing with any hint of insolence or injustice, which will inevitably rub off on to the souls and bodies of his children, and produce absolutely degenerate creatures who have been stamped with the e
likeness of their father. At the very least, he must shun such vices on the day of his wedding and the following night, because if a human institution gets off to a good and careful start, there is a sort of divine guarantee that it will prosper.

The bridegroom must regard one of the two homes included in the lot 776
as the nest in which he will bring up his brood of young; here he must be married, after leaving his father and mother, and here he must make his home and become the breadwinner for himself and his children. You see, when people feel the need of absent friends, the ties that bind them are strengthened, but when they overdo it and are too much together so that they're not apart long enough to miss each other, they drift apart. That's why the newly-weds must leave their father and mother and the wife's relatives in the old home and live somewhere else, rather as if they had gone off to a colony; and each side should visit, and be visited by, b
the other. The young couple should produce children and bring them up, handing on the torch of life from generation to generation, and always worshipping the gods in the manner prescribed by law.

Now for the question of property: what will it be reasonable for a man to possess? Mostly, it's not difficult to see what it would be, and acquire it; but slaves offer difficulties at every turn. The reason is this. The terms c
we employ are partly correct and partly not, in that the actual language we use about slaves is partly a reflection and partly a contradiction of our practical experience of them.

MEGILLUS: Oh? What do you mean? We don't yet see your point, sir.

ATHENIAN: No wonder, Megillus. The Spartan helot-system is probably just about the most difficult and contentious institution in the entire Greek world;[12] some people think it's a good idea, others are against it (though less feeling is aroused by the slavery to which the Mariandynians have d
been reduced at Heraclea, and by the race of serfs to be found in Thessaly). Faced with these and similar cases, what should our policy be on the ownership of slaves? The point I happened to bring up in my discussion of the subject, and which naturally made you ask what I meant, was this: we know we'd all agree that a man should own the best and most docile slaves he can get—after all, many a paragon of a slave has done much more for a man than his own brother or son, and they have often been

12. The Spartan helots were a numerous class of state serfs, in part the descendants of the original non-Doric population conquered by the Dorian settlers (c. 1000 B.C.); see 633b above.

e the salvation of their masters' persons and property and entire homes. We know quite well, don't we, that some people do tell such stories about slaves?

MEGILLUS: Certainly.

ATHENIAN: And don't others take the opposite line, and say that a slave's soul is rotten through and through, and that if we have any sense we won't trust such a pack at all? The most profound of our poets actually
777 says (speaking of Zeus) that

> *If you make a man a slave, that very day*
> *Far-sounding Zeus takes half his wits away.*[13]

Everyone sees the problem differently, and takes one side or the other. Some people don't trust slaves as a class in anything: they treat them like animals, and whip and goad them so that they make the souls of their slaves three times—no, a thousand times—more slavish than they were. Others follow precisely the opposite policy.

MEGILLUS: True.

b CLINIAS: Well then, sir, in view of this conflict of opinion, what should we do about our own country? What's our line on the possession of slaves, and the way to punish them?

ATHENIAN: Look here, Clinias: the animal 'man' quite obviously has a touchy temper, and it looks as if it won't be easy, now or in the future, to persuade him to fall neatly into the two categories (slave and freeman master) which are necessary for practical purposes. Your slave, therefore,
c will be a difficult beast to handle. The frequent and repeated revolts in Messenia, and in the states where people possess a lot of slaves who all speak the same language, have shown the evils of the system often enough; and we can also point to the various crimes and adventures of the robbers who plague Italy, the 'Rangers', as they're called. In view of all this you may well be puzzled to know what your general policy ought to be. In fact, there are just two ways of dealing with the problem open to us: first,
d if the slaves are to submit to the condition without giving trouble, they should not all come from the same country or speak the same tongue, as far as it can be arranged; secondly, we ought to train them properly, not only for their sakes but above all for our own. The best way to train slaves is to refrain from arrogantly ill-treating them, and to harm them even less (assuming that's possible) than you would your equals. You see, when a man can hurt someone as often as he likes, he'll soon show whether or not his respect for justice is natural and unfeigned and springs from a
e genuine hatred of injustice. If his attitude to his slaves and his conduct towards them are free of any taint of impiety and injustice, he'll be splendidly effective at sowing the seeds of virtue. Just the same can be said of

13. *Odyssey* xvii.322–23.

the way in which any master or dictator or person in any position of authority deals with someone weaker than himself. Even so, we should certainly punish slaves if they deserve it, and not spoil them by simply giving them a warning, as we would free men. Virtually everything you say to a slave should be an order, and you should never become at all 778
familiar with them—neither the women nor the men. (Though this is how a lot of silly folk do treat their slaves, and usually only succeed in spoiling them and in making life more difficult—more difficult, I mean, for the slaves to take orders and for themselves to maintain their authority.)

CLINIAS: You're quite right.

ATHENIAN: So now that the citizen has been supplied with a sufficient number of suitable slaves to help him in his various tasks, the next thing will be to outline a housing-plan, won't it?

CLINIAS: Certainly. b

ATHENIAN: Our state is new, and has no buildings already existing, so it rather looks as if it will have to work out the details of its entire architectural scheme for itself, particularly those of the temples and city walls. Ideally, Clinias, this subject would have been dealt with before we discussed marriage, but as the whole picture is theoretical anyway, it's perfectly possible to turn to it now, as we are doing. Still, when we put the scheme into practice, we'll see to the buildings, God willing, *before* we regulate marriage, and marriage will then crown our labors in this field. But here and now, c
let's just give a swift sketch of the building program.

CLINIAS: By all means.

ATHENIAN: Temples should be built all round the marketplace and on high ground round the perimeter of the city, for purposes of protection and sanitation. Next to them should be administrative offices and courts of law. This is holy ground, and here—partly because the legal cases involve solemn religious issues, partly because of the august divinities d
whose temples are nearby—judgment will be given and sentence received. Among these buildings will be the courts in which cases of murder, and all other crimes which deserve the death penalty, may properly be heard.

As for city walls, Megillus, I'd agree with the Spartan view that they should be left lying asleep and undisturbed in the ground. My reasons? As the poet neatly puts it, in those words so often cited, 'a city's walls should be made of bronze and iron, not stone'.[14] Besides, what fools people would take us for, and rightly, if we sent our young men out into the e
countryside every year to excavate trenches and ditches and various structures to ward off the enemy and stop them coming over the boundaries at all[15]—and then were to build a wall round the city! A wall never contributes anything to a town's health, and in any case is apt to encourage a certain softness in the souls of the inhabitants. It invites them to take refuge behind 779

14. We do not know the poet referred to, but the sentiment is fairly common: see e.g. Aeschylus, *Persians* 349.

15. See 760e.

it instead of tackling the enemy and ensuring their own safety by mounting guard night and day; it tempts them to suppose that a foolproof way of protecting themselves is to barricade themselves in behind their walls and gates, and then drop off to sleep, as if they were brought into this world for a life of luxury. It never occurs to them that comfort is really to be won by the sweat of the brow, whereas the only result of such disgusting luxury and idleness is a fresh round of troubles, in my view. However, if
b men are to have a city wall at all, the private houses should be constructed right from the foundations so that the whole city forms in effect a single wall: that is, all the houses should be easy to defend because they present to the street a regular and unbroken front. A whole city looking like a single house will be quite a pretty sight, and being easy to guard it will be superior to any other for safety. The job of seeing that the buildings
c always keep to the original scheme should properly belong to their occupants, but the City-Wardens should keep an eye on them and even impose fines to force any negligent person to do his duty. They should also supervise all the sanitary arrangements of the town and stop any private person encroaching on public land by buildings or excavations. The same officials must take particular care to see that rainwater flows away properly, and in general they must make all the appropriate arrangements inside and outside the city. To deal with all these points, and to supplement any other
d deficiency in the law (which cannot be exhaustive), the Guardians of the Laws are to make additional rules in the light of experience.

So much for these buildings, together with those round the marketplace, and gymnasia and all the schools: they are now ready and waiting to be entered, and the theaters are prepared for the arrival of their audiences. Now let's pass on to the next item in our legislation, the time after the wedding.

CLINIAS: By all means.

e ATHENIAN: Let's suppose the ceremony is over, Clinias; between then and the birth of a child there may well be a complete year. Now, in a state which sets its sights higher than others, how this year is to be spent by a bride and groom (you remember we broke off when we got to this point) is not the easiest thing in the world to specify. We've had knotty problems like this before, but the common man will find our policy this time more difficult to swallow than ever. However, we should never shrink from speaking the truth as we see it, Clinias.

CLINIAS: Of course.

780 ATHENIAN: Take someone who proposes to promulgate laws to a state about the correct conduct of the public life of the community. What if he reckons that *in principle* one ought not to use compulsion—even in so far as one *can* use it in private affairs? Suppose he thinks that a man ought to be allowed to do what he likes with the day, instead of being regulated at every turn. Well, if he excludes private life from his legislation, and expects that the citizens will be prepared to be law-abiding in their public life as a community, he's making a big mistake. Now, what's made me say this? It's because we

are going to assert that our newly-marrieds ought to attend communal meals b
no more and no less than they did before their wedding. I know that this
custom of eating together caused eyebrows to be raised when it was intro-
duced in your parts of the world, but I suppose it was dictated by war or
some other equally serious emergency that pressed hard on a small people
in a critical situation. But once you had had this enforced experience of com-
munal meals, you realized just how much the custom contributed to your
security. It must have been in some such way that the practice of communal c
feeding established itself among you.

CLINIAS: That sounds plausible enough.

ATHENIAN: As I was saying, it was once an astonishing custom and some
people were apprehensive about imposing it. But if a legislator wanted to
impose it today, he wouldn't have half so much trouble. But the custom
points to another measure, which would probably prove equally successful,
if tried. Today, it's absolutely unheard-of, and that's what makes the legisla-
tor 'card his wool into the fire', as the saying is, and make so many efforts
fruitlessly. This measure is neither easy to describe nor simple in execution. d

CLINIAS: Well then, sir, what's the point you're trying to make? You
seem to be awfully reluctant to tell us.

ATHENIAN: Listen to me, then: let's not waste time lingering over this
business. The blessings that a state enjoys are in direct proportion to the
degree of law and order to be found in it, and the effects of good regulations
in some fields are usually vitiated to the extent that things are controlled
either incompetently or not at all in others. The point is relevant to the
subject in hand. Thanks to some providential necessity, Clinias and Megil- e
lus, you have a splendid and—as I was saying—astonishing institution:
communal meals for men. But it is entirely wrong of you to have omitted 781
from your legal code any provision for your women, so that the practice
of communal meals for them has never got under way. On the contrary,
half the human race—the female sex, the half which in any case is inclined
to be secretive and crafty, because of its weakness—has been left to its
own devices because of the misguided indulgence of the legislator. Because
you neglected this sex, you gradually lost control of a great many things
which would be in a far better state today if they had been regulated by
law. You see, leaving women to do what they like is not just to lose *half* b
the battle (as it may seem): a woman's natural potential for virtue is inferior
to a man's, so she's proportionately a greater danger, perhaps even twice
as great. So the happiness of the state will be better served if we reconsider
the point and put things right, by providing that all our arrangements
apply to men and women alike. But at present, unhappily, the human race
has not progressed as far as that, and if you're wise you won't breathe a c
word about such a practice in other parts of the world where states do
not recognize communal meals as a public institution at all. So when it
comes to the point, how on earth are you going to avoid being laughed
to scorn when you try to force women to take their food and drink in
public? There's nothing the sex is likely to put up with more reluctantly:

women have got used to a life of obscurity and retirement, and any attempt to force them into the open will provoke tremendous resistance from them,
d and they'll be more than a match for the legislator. Elsewhere, as I said, the very mention of the correct policy will be met with howls of protest. But perhaps this state will be different. So if you want our discussion about political systems to be as complete as theory can ever be, I'd like to explain the merits and advantages of this institution—that is, if you are equally keen to listen to me. If not, then let's skip it.

CLINIAS: No, no, sir: we're very anxious to hear the explanation.

ATHENIAN: Let's listen, then. But don't be disconcerted if I appear to be
e starting a long way back. We've time to spare, and there's no compelling reason why we shouldn't look into the business of legislation from all possible angles.

CLINIAS: You're quite right.

ATHENIAN: Let's go back to what we said at the beginning.[16] Here's something that everyone must be perfectly clear about: *either* mankind had
782 absolutely no beginning in time and will have no end, but always existed and always will, *or* it has existed for an incalculably long time from its origin.

CLINIAS: Naturally.

ATHENIAN: Well, now we may surely assume that in every part of the world cities have been formed and destroyed, and all sorts of customs have been adopted, some orderly, some not, along with the growth of every sort of taste in food, solid and liquid. And the various changes in the seasons have developed, which have probably stimulated a vast number of
b natural changes in living beings.

CLINIAS: Of course.

ATHENIAN: Well, we believe, don't we, that at a certain point virtues made their appearance, not having existed before, and olives likewise, and the gifts of Demeter and Kore,[17] which Triptolemus, or whoever it was, handed on to us? So long as these things did not exist, we can take it that animals resorted to feeding on each other, as they do now?

CLINIAS: Certainly.

c ATHENIAN: We observe, of course, the survival of human sacrifice among many people today. Elsewhere, we gather, the opposite practice prevailed, and there was a time when we didn't even dare to eat beef, and the sacrifices offered to the gods were not animals, but cakes and meal soaked in honey and other 'pure' offerings like that. People kept off meat on the grounds that it was an act of impiety to eat it, or to pollute the altars of the gods with blood. So at that time men lived a sort of 'Orphic'[18] life,

16. See 676a ff.

17. Grains.

18. The Orphics held that a human soul could be reborn in the body of another human being or an animal, and the soul of an animal in another animal or a human being. Hence they strictly prohibited killing and meat-eating.

keeping exclusively to inanimate food and entirely abstaining from eating d
the flesh of animals.

CLINIAS: So it's commonly said, and it's easy enough to believe.

ATHENIAN: Then the question naturally arises, why have I related all this to you now?

CLINIAS: A perfectly correct assumption, sir.

ATHENIAN: Now then, Clinias, I'll try to explain the next point, if I can.

CLINIAS: Carry on, then.

ATHENIAN: Observation tells me that all human actions are motivated by a set of three needs and desires. Give a man a correct education, and e
these instincts will lead him to virtue, but educate him badly and he'll end up at the other extreme. From the moment of their birth men have a desire for food and drink. Every living creature has an instinctive love of satisfying this desire whenever it occurs, and the craving to do so can fill a man's whole being, so that he remains quite unmoved by the plea that he should do anything except satisfy his lust for the pleasures of the body, so as to make himself immune to all discomfort. Our third and greatest 783
need, the longing we feel most keenly, is the last to come upon us: it is the flame of the imperious lust to procreate, which kindles the fires of passion in mankind. These three unhealthy instincts must be canalized *away* from what men call supreme pleasure, and *towards* the supreme good. We must try to keep them in check by the three powerful influences of fear, law, and correct argument; but in addition, we should invoke the help of the Muses and the gods who preside over competitions, to smother b
their growth and dam their tide.

The topic which should come after marriage, and before training and education, is the birth of children. Perhaps, as we take these topics in order, we shall be able to complete each individual law as we did before, when we approached the question of communal meals—I mean that when we've become intimate with our citizens, perhaps we shall be able to see more clearly whether such gatherings should consist of men only or whether, after all, they should include women. Similarly, when we've won control of certain institutions that have never yet been controlled by law, c
we'll use them as 'cover', just as other people do, with the result I indicated just now: thanks to a more detailed inspection of these institutions, we may be able to lay down laws that take account of them better.

CLINIAS: Quite right.

ATHENIAN: So let's bear in mind the points we've just made, in case we find we need to refer to them later on.

CLINIAS: What points in particular are you telling us to remember?

ATHENIAN: The three impulses we distinguished by our three terms: the desire for 'food' (I think we said) and 'drink', and thirdly 'sexual stimu- d
lation'.

CLINIAS: Yes, sir, we'll certainly remember, just as you tell us.

ATHENIAN: Splendid. Let's turn our attention to the bridal pair, and instruct them in the manner and method by which they should produce

children. (And if we fail to persuade them, we'll threaten them with a law or two.)

CLINIAS: How do you mean?

ATHENIAN: The bride and groom should resolve to present the state with
e the best and finest children they can produce. Now, when human beings co-operate in any project, and give due attention to its planning and execution, the results they achieve are always of the best and finest quality; but if they act carelessly, or are incapable of intelligent action in the first place, the results are deplorable. So the bridegroom had better deal with his wife and approach the task of begetting children with a sense of responsibility, and the bride should do the same, especially during the period when no
784 children have yet been born to them. They should be supervised by women whom we have chosen[19] (several or only a few—the officials should appoint the number they think right, at times within their discretion). These women must assemble daily at the temple of Eileithuia[20] for not more than a third of the day, and when they have convened each must report to her colleagues any wife or husband of childbearing age she has seen who is concerned with anything but the duties imposed on him or her at the time of the
b sacrifices and rites of their marriage. If children come in suitable numbers, the period of supervised procreation should be ten years and no longer. But if a couple remain childless throughout this period, they should part, and call in their relatives and the female officials to help them decide terms of divorce that will safeguard the interests of them both. If some dispute arises about the duties and interests of the parties, they must choose ten
c of the Guardians of the Laws as arbitrators, and abide by their decisions on the points referred to them. The female officials must enter the homes of the young people and by a combination of admonition and threats try to make them give up their ignorant and sinful ways. If this has no effect, they must go and report the case to the Guardians of the Laws, who must resort to sterner methods. If even the Guardians prove ineffective, they should make the case public and post up the relevant name, swearing on their oath that they are unable to reform so-and-so.

d 18. (a) Unless the person whose name is posted up succeeds in convicting in court those who published the notice,
he must be deprived of the privilege of attending weddings and parties celebrating the birth of children.

19. If he persists in attending,
anyone who wishes should chastise him by beating him, and not be punished for it.

19. No such women have been mentioned. (In other ways too the state of the text hereabouts suggests a lack of revision.)

20. Goddess of childbirth.

18. (b) If a woman misbehaves and her name is posted up, and she fails to win the day in court,
the same regulations are to apply to her too: she must be excluded from female processions and distinctions, and be forbidden to attend weddings and parties celebrating the birth of children.

20. When children have been produced as demanded by law, if a man has intercourse with another woman, or a woman with another man, and the other party is still procreating, e
they must suffer the same penalty as was specified for those who are still having children.

21. After the period of child-bearing, the chaste man or woman should be highly respected;
the promiscuous should be held in the opposite kind of 'repute' (though *dis*repute would be a better word).

When the majority of people conduct themselves with moderation in 785
sexual matters, no such regulations should be mentioned or enacted; but if there is misbehavior, regulations should be made and enforced after the pattern of the laws we've just laid down.

Our first year is the beginning of our whole life, and every boy's and girl's year of birth should be recorded in their family shrines under the heading 'born'. Alongside, on a whitened wall, should be written up in every brotherhood the sequence-numbers of the officials who facilitate the numbering of the years. The names of the living members of the brother- b
hood should be inscribed nearby, and those of the deceased expunged.

The age limits for marriage shall be: for a girl, from sixteen to twenty (these will be the extreme limits specified), and for a man, from thirty to thirty-five. A woman may hold office from the age of forty, a man from thirty. Service in the armed forces shall be required of a man from twenty to sixty. As for women, whatever military service it may be thought necessary to impose (after they have finished bearing children) should be performed up to the age of fifty; practicable and appropriate duties should be specified for each individual.

Book VII

ATHENIAN: Now that the boys and girls have been born, I suppose their 788
education and training will be the most suitable topic to deal with next. This is not something we can leave on one side: that would be out of the question. However, we shall clearly do better to confine our remarks to advice and instruction, and not venture on precise regulations. In the privacy of family life, you see, a great many trivial activities never get publicity, and under the stimulus of feelings of pleasure or pain or desire b

they can all too easily fly in the face of the lawgiver's recommendations and produce citizens whose characters are varied and conflicting, which is a social evil. Now although these activities are so trivial and so common that one cannot decently arrange to punish them by law, they do tend to undermine the written statutes, because men get into the habit of repeatedly
c breaking rules in small matters. That's why in spite of all the difficulties of legislating on such points, we can't simply say nothing about them. But I must try to clarify my point by showing you some samples, as it were. At the moment, I expect it looks as if I'm rather concealing my meaning.

CLINIAS: You're quite right, it does.

ATHENIAN: I take it we were justified in asserting that if an education is to qualify as 'correct', it simply must show that it is capable of making our souls and bodies as fine and as handsome as they can be?

CLINIAS: Of course.

d ATHENIAN: And I suppose (to take the most elementary requirement), that if a person is going to be supremely good-looking, his posture must be as erect as possible, right from his earliest years?

CLINIAS: Certainly.

ATHENIAN: Well now, we observe, don't we, that the earliest stages of growth of every animal are by far the most vigorous and rapid? That's why a lot of people actually maintain that in the case of man, the first five years of life see more growth than the next twenty.

CLINIAS: That's true.

789 ATHENIAN: But we're aware that rapid growth without frequent and appropriately graded exercises leads to a lot of trouble for the body?

CLINIAS: Yes, indeed.

ATHENIAN: And isn't it precisely when a body is getting most nourishment that it needs most exercise?

CLINIAS: Good Heavens, sir, are we going to demand such a thing of new-born babies and little children?

ATHENIAN: No—I mean even earlier, when they're getting nourishment in their mother's body.

CLINIAS: What's that you say? My dear sir! Do you really mean in the womb?

b ATHENIAN: Yes, I do. But it's hardly surprising you haven't heard of these athletics of the embryo. It's a curious subject, but I'd like to tell you about it.

CLINIAS: Do so, of course.

ATHENIAN: It's something it would be easier to understand in Athens, where some people go in for sport more than they should. Not only boys, but some elderly men as well, rear young birds and set them to fight one
c another. But they certainly don't think just pitting them one against another will give such creatures adequate exercise. To supplement this, each man keeps birds somewhere about his person—a small one in the cup of his hand, a larger one under his arm—and covers countless stades in walking

about, not for the sake of his own health, but to keep these animals in good shape. To the intelligent person, the lesson is obvious: all bodies find it helpful and invigorating to be shaken by movements and joltings of all d
kinds, whether the motion is due to their own efforts or they are carried on a vehicle or boat or horse or any other mode of conveyance. All this enables the body to assimilate its solid and liquid food, so that we grow healthy and handsome and strong into the bargain. In view of all this, can we say what our future policy should be? If you like, we could lay down e
precise rules (and how people would laugh at us!): (1) A pregnant woman should go for walks, and when her child is born she should mold it like wax while it is still supple, and keep it well wrapped up for the first two years of its life. (2) The nurses must be compelled under legal penalty to contrive that the children are always being carried to the country or temples or relatives, until they are sturdy enough to stand on their own feet. (3) Even then, the nurses should persist in carrying the child around until it's three, to keep it from distorting its young limbs by subjecting them to too much pressure. (4) The nurses should be as strong as possible, and there must be plenty of them—and we could provide written penalties for each 790
infringement of the rules. But no! That would lead to far too much of what I mentioned just now.

CLINIAS: You mean . . .

ATHENIAN: . . . the tremendous ridicule we'd provoke. And the nurses (women and slaves, with characters to match) would refuse to obey us anyway.

CLINIAS: Then why did we insist that the rules should be specified?

ATHENIAN: For this reason. A state's free men and masters have quite b
different characters to the nurses', and there's a chance that if they hear these regulations they may be led to the correct conclusion: the state's general code of laws will never rest on a firm foundation as long as private life is badly regulated, and it's silly to expect otherwise. Realizing the truth of this, they may themselves spontaneously adopt our recent suggestions as rules, and thereby achieve the happiness that results from running their households and their state on proper lines.

CLINIAS: Yes, that's all very reasonable.

ATHENIAN: Still, let's not abandon this style of legislation yet. We started c
to talk about young children's bodies: let's use the same sort of approach to explain how to shape their personalities.

CLINIAS: Good idea.

ATHENIAN: So let's take this as our basic principle in both cases: all young children, and especially very tiny infants, benefit both physically and mentally from being nursed and kept in motion, as far as practicable, throughout the day and night; indeed, if only it could be managed, they ought to live as though they were permanently on board ship. But as that's impossible, we must aim to provide our new-born infants with the closest d
possible approximation to this ideal.

Here's some further evidence, from which the same conclusions should be drawn: the fact that young children's nurses, and the women who cure Corybantic conditions,[1] have learned this treatment from experience and have come to recognize its value. And I suppose you know what a mother does when she wants to get a wakeful child to sleep. Far from keeping
e him still, she takes care to move him about, rocking him constantly in her arms, not silently, but humming a kind of tune. The cure consists of *movement*, to the rhythms of dance and song; the mother makes her child *'pipe down'* just as surely as the music of the *pipes* bewitches the frenzied Bacchic reveler.[2]

CLINIAS: Well then, sir, have we any particular explanation for all this?

ATHENIAN: The reason's not very hard to find.

CLINIAS: What is it?

ATHENIAN: Both these conditions are a species of fear, and fear is the result
791 of some inadequacy in the personality. When one treats such conditions by vigorous movement, this external motion, by canceling out the internal agitation that gives rise to the fear and frenzy, induces a feeling of calm and peace in the soul, in spite of the painful thumping of the heart experienced by each patient. The result is very gratifying. Whereas the wakeful children are sent to sleep, the revelers (far from asleep!), by being set to dance to the music of the pipes, are restored to mental health after their
b derangement, with the assistance of the gods to whom they sacrifice so propitiously. This explanation, brief as it is, is convincing enough.

CLINIAS: Yes, indeed.

ATHENIAN: Well then, seeing how effective these measures are, here's another point to notice about the patient.[3] Any man who has experienced terrors from his earliest years will be that much more likely to grow up timid. But no one will deny that this is to train him to be a coward, not a hero.

CLINIAS: Of course.

c ATHENIAN: Contrariwise, we'd agree that a training in courage right from infancy demands that we overcome the terrors and fears that assail us?

CLINIAS: Exactly.

ATHENIAN: So we can say that exercising very young children by keeping them in motion contributes a great deal towards the perfection of one aspect of the soul's virtue.

CLINIAS: Certainly.

ATHENIAN: Further, good humor and bad humor will be a conspicuous element in a good or bad moral character respectively.

1. Frenzied pathological states accompanied by a strong desire to dance, popularly supposed to be caused by the Corybantes, spirits in attendance on the goddess Cybele. The condition was cured homoeopathically by the *disciplined* music and dancing of Corybantic ritual.

2. Reading *bakcheiōn* in e3 with acute accent on the second syllable.

3. Reading *autois* in b6.

CLINIAS: Of course.

ATHENIAN: So how can we instil into the new-born child, right from the start, whichever of these two characteristics we want? We must try to indicate how far they are within our control, and the methods we have to use. d

CLINIAS: Quite so.

ATHENIAN: I belong to the school of thought which maintains that luxury makes a child bad-tempered, irritable, and apt to react violently to trivial things. At the other extreme, unduly savage repression turns children into cringing slaves and puts them so much at odds with the world that they become unfit to be members of a community.

CLINIAS: So how should the state as a whole set about bringing up children who are as yet unable to understand what is said to them or respond to any attempt to educate them? e

ATHENIAN: More or less like this. Every new-born animal is apt to give a sort of loud yell—especially the human child, who in addition to yelling is also exceptionally prone to tears.

CLINIAS: He certainly is.

ATHENIAN: So if a nurse is trying to discover what a child wants, she judges from these reactions to what it is offered. Silence, she thinks, means she is giving it the right thing, whereas crying and bawling indicate the wrong one. Clearly these tears and yells are the child's way of signaling his likes and dislikes—and ominous signs they are, too, because this stage lasts at least three years, and that's quite a large part of one's life to spend badly (or well). 792

CLINIAS: You're right.

ATHENIAN: Now don't you two think that a morose and ungenial fellow will on the whole be a more of a moaner and a grumbler than a good man has any right to be? b

CLINIAS: Yes, *I* think so, at any rate.

ATHENIAN: Well then, suppose you do your level best during these years to shelter him from distress and fright and any kind of pain at all. Shouldn't we expect that child to be educated into a more cheerful and genial disposition?

CLINIAS: Certainly, and especially, sir, if one surrounded him with lots of pleasures. c

ATHENIAN: Now here, my dear sir, is just where Clinias no longer carries me with him. That's the best way to ruin a child, because the corruption invariably sets in at the very earliest stages of his education. But perhaps I'm wrong about this: let's see.

CLINIAS: Tell us what you mean.

ATHENIAN: I mean that we're now discussing a topic of great importance. So you too, Megillus, see what your views are, and help us to make up our minds. My position is this: the right way of life is neither a single-minded pursuit of pleasure nor an absolute avoidance of pain, but a genial (the word I used just now) contentment with the state between those d

extremes—precisely the state, in fact, which we always say is that of God himself (a conjecture that's reasonable enough, supported as it is by the statements of the oracles). Similarly if one of *us* aspires to live like a god, this is the state he must try to attain. He must refuse to go looking for pleasure on his own account, aware that this is not a way of avoiding pain; nor must he allow anyone else to behave like that, young or old,
e male or female—least of all newly-born children, if he can help it, because that's the age when habits, the seeds of the entire character, are most effectively implanted. I'd even say, at the risk of appearing flippant, that all expectant mothers, during the year of their pregnancy, should be supervised more closely than other women, to ensure that they don't experience frequent and excessive pleasures, or pains either. An expectant mother should think it important to keep calm and cheerful and sweet-tempered throughout her pregnancy.

793 CLINIAS: There's no need to ask Megillus which of us two has made the better case, sir. I agree with you that everyone should avoid a life of extreme pleasure and pain, and always take the middle course between them. Your point has been well and truly put, and you've heard it well and truly endorsed.

ATHENIAN: Admirable, Clinias! Well then, here's a related point that the three of us should consider.

CLINIAS: What's that?

ATHENIAN: That all the rules we are now working through are what
b people generally call 'unwritten customs', and all this sort of thing is precisely what they mean when they speak of 'ancestral law'. Not only that, but the conclusion to which we were driven a moment ago was the right one: that although 'laws' is the wrong term for these things, we can't afford to say *nothing* about them, because they are the bonds of the entire social framework, linking all written and established laws with those yet to be passed. They act in the same way as ancestral customs dating from time immemorial, which by virtue of being soundly established and in-
c stinctively observed, shield and protect existing written law. But if they go wrong and get 'out of true'—well, you know what happens when carpenters' props buckle in a house: they bring the whole building crashing down, one thing on top of another, stays and superstructure (however well built) alike—all because the original timberwork has given way. So you see, Clinias, this is what we have to bear in mind in thoroughly binding your state together while it is still a new foundation; we must do our best
d not to omit anything, great or small, whether 'laws', 'habits' or 'institutions', because they are all needed to bind a state together, and the permanence of the one kind of norm depends on that of the other. So we ought not to be surprised to see a flood of apparently unimportant customs or usages making our legal code a bit on the long side.

CLINIAS: You're quite right, and we'll keep the point in mind.

ATHENIAN: Up to the age of three the early training of a boy or girl will
e be helped enormously by this regimen, provided it is observed punctili-

ously and systematically. In the fourth, fifth, sixth and even seventh year of life, a child's character will need to be formed while he plays; we should now stop spoiling him, and resort to discipline, but not such as to humiliate him. We said, in the case of slaves,[4] that discipline should not be enforced so high-handedly that they become resentful, though on the other hand we mustn't spoil them by letting them go uncorrected; the same rule 794
should apply to free persons too. When children are brought together, they discover more or less spontaneously the games which come naturally to them at that age. As soon as they are three, and until they reach the age of six, all children must congregate at the village temples—the children of each village to assemble at the same place. They should be kept in order and restrained from bad behavior by their nurses, who should themselves be supervised, along with their groups as a whole, by the twelve women b
elected for the purpose, one to be in charge of one group for a year at a time, the allocations to be made by the Guardians of the Law. The twelve must be elected by the women in charge of supervising marriage, one must be chosen from each tribe, and they must be of the same age as their electors. The woman allotted to a given tribe will discharge her duties by visiting the temple daily and punishing any cases of wrongdoing. She may use a number of state slaves to deal with male and female slaves and aliens on her own authority; however, if a citizen disputes his punishment, c
she must take the case to the City-Wardens, but if he does not dispute it, she may punish him too on her own authority. When the boys and girls have reached the age of six, the sexes should be separated; boys should spend their days with boys, and girls with girls. Each should attend lessons. The males should go to teachers of riding, archery, javelin-throwing and d
slinging—and the females too, if they are agreeable, may attend at any rate the lessons, especially those in the use of weapons. In this business, you see, pretty nearly everyone misunderstands the current practice.

CLINIAS: How so?

ATHENIAN: People think that where the hands are concerned right and left are *by nature* suited for different specialized tasks—whereas of course in the case of the feet and the lower limbs there is obviously no difference in efficiency at all. Thanks to the silly ideas of nurses and mothers we've e
all been made lame-handed, so to speak. The natural potential of each arm is just about the same, and the difference between them is our own fault, because we've habitually misused them. Of course, in activities of no consequence—using the left hand for the lyre and the right for the plectrum and so on—it doesn't matter in the slightest. But to take these examples as a model for other activities too, when there's no need, is pretty stupid. 795
The Scythian practice is an illustration of this: a Scythian doesn't use his left hand exclusively to draw his bow and his right hand exclusively to fit in the arrow, but uses both hands for both jobs indifferently. There are

4. See 777d ff.

a lot of other similar examples to be found—in driving chariots, for instance, and other activities—from which we can see that when people train the left hand to be weaker than the right they are going *against* nature. As we said, that doesn't matter when it's a case of *plectra* of horn and similar
b instruments. But it matters enormously when one has to use iron weapons of war (javelins, arrows or whatever), and it matters most of all when you have to use your weapons in fighting hand to hand. And what a difference there is between a man who has learned this lesson and one who has not, between the trained and the untrained fighter! You know how a trained pancratiast or boxer or wrestler can fight on his left, so that when his opponent makes him change over and fight on that side, he doesn't stagger round as though he were lame, but keeps his poise. And I reckon we have
c to suppose that precisely the same rule applies to the use of weapons and to all other activities: when a man has two sets of limbs for attack and defense, he ought to leave neither of them idle and untrained if he can help it. In fact, if you were born with the body of a Geryon or a Briareus, you ought to be able to throw a hundred shafts with your hundred hands.
d All these points should come under the supervision of the male and female officials, the latter keeping an eye on the training the children get at play, the former superintending their lessons. They must see that every boy and girl grows up versatile in the use of both hands and both feet, so that they don't ruin their natural abilities by their acquired habits, so far as they can be prevented.

In practice, formal lessons will fall into two categories, physical training for the body, and cultural education to perfect the personality. Physical
e training can be further subdivided into two branches: dancing and wrestling. Now when people dance, they are either acting the words of the composer, and a dignified and civilized style is their prime concern, or they are aiming at physical fitness, agility and beauty. In this case they are preoccupied with bending and stretching in the approved fashion, so that each limb and other part of the body can move with its own peculiar grace—a grace which is then carried over and infused into dancing in
796 general. As for wrestling, the kind of trick introduced as part of their technique by Antaeus and Cercyon because of their wretched obsession with winning, and the boxing devices invented by Epeius and Amycus, are absolutely useless in a military encounter and don't merit the honor of being described.[5] But if the legitimate maneuvers of *regular* wrestling—extricating the neck and hands and sides from entanglement—are practiced for the sake of strength and health with a vigorous desire to win and without resort to undignified postures, then they are extremely useful,
b and we mustn't neglect them. So when we reach the proper place in our legal code we must tell the future teachers to present all this kind of

5. E.g. dropping on to the ground in wrestling (Antaeus), and the use of gloves in boxing (Amycus).

instruction in an attractive way, and the pupils to receive it with gratitude. Nor should we omit to mention the chorus-performances that may appropriately be imitated: for instance, here in Crete the 'games in armor' of the Curetes,[6] and those of the Dioscuri[7] in Sparta. And at Athens our Virgin Lady,[8] I believe, charmed by the pleasure of performing in a chorus, and disapproving of empty hands in recreation, thought she should perform c
the dance only when arrayed in full armor. Our boys and girls should imitate her example wholeheartedly, and prize the gift which the goddess has made them, because it increases their fighting skill and embellishes their festivals. Young boys, right from the early stages up to the age of military service, should be equipped with weapons and horses whenever they parade and process in honor of any god; and when they supplicate the gods and sons of gods they must dance and march in step, sometimes briskly, sometimes slowly. Even contests and preliminary heats, if they d
are to prove their worth in war and peace to the state and private households, must be conducted with these purposes in view and no other. Other kinds of physical exercise, Megillus and Clinias, whether serious or by way of recreation, are beneath the dignity of a gentleman.

I've now pretty well described the sort of physical education which needed to be described, as I said early on.[9] So there it is, in all its detail. If you know of a better system than that, let's have it. e

CLINIAS: No sir, if we cry off these ideas of yours a better program of competitions and physical training won't be easy to find.

ATHENIAN: The next subject is the gifts of Apollo and the Muses. When we discussed this before,[10] we thought we'd exhausted the topic, and that physical training alone remained for discussion. But it's clear now that a number of points were omitted—points which everyone ought in fact to hear first. So let's go through them in order.

CLINIAS: Yes, they should certainly be mentioned.

ATHENIAN: Listen to me then. You've done that before, of course, but 797
such a curious eccentricity calls for extreme caution in the speaker and his audience. You see, I'm going to spin a line that almost makes me afraid to open my mouth; still, I'll pluck up my courage and go ahead.

CLINIAS: What is this thesis of yours, sir?

ATHENIAN: I maintain that no one in any state has really grasped that children's games affect legislation so crucially as to determine whether the laws that are passed will survive or not. If you control the way children play, and the same children always play the same games under the same b

6. Cretan spirits who protected the infant Zeus.
7. Castor and Pollux.
8. Athena.
9. See 673b ff.
10. In Books I–II.

rules and in the same conditions, and get pleasure from the same toys, you'll find that the conventions of adult life too are left in peace without alteration. But in fact games are always being changed and constantly modified and new ones invented, and the younger generation never enthuses over the same thing for two days running. They have no permanent agreed standard of what is becoming or unbecoming either in deportment
c or their possessions in general; they worship anyone who is always introducing some novelty or doing something unconventional to shapes and colors and all that sort of thing. In fact, it's no exaggeration to say that this fellow is the biggest menace that can ever afflict a state, because he quietly changes the character of the young by making them despise old things and value novelty. That kind of language and that kind of outlook is—again I say it—the biggest disaster any state can suffer. Listen: I'll tell you just how big an evil I maintain it is.

d CLINIAS: You mean the way the public grumbles at old-fashioned ways of doing things?

ATHENIAN: Exactly.

CLINIAS: Well, you won't find us shutting our ears to that kind of argument—you couldn't have a more sympathetic audience.

ATHENIAN: So I should imagine.

CLINIAS: Go on then.

ATHENIAN: Well now, let's listen to the argument with even greater attention than usual, and expound it to each other with equal care. Change, we shall find, except in something evil, is extremely dangerous. This is true of seasons and winds, the regimen of the body and the character of
e the soul—in short, of everything without exception (unless, as I said just now, the change affects something evil). Take as an example the way the body gets used to all sorts of food and drink and exercise. At first they upset it, but then in the course of time it's this very regimen that is responsible for its putting on flesh. Then the regimen and the flesh form
798 a kind of partnership, so that the body grows used to this congenial and familiar system, and lives a life of perfect happiness and health. But imagine someone forced to change again to one of the other recommended systems: initially, he's troubled by illnesses, and only slowly, by getting used to his new way of life, does he get back to normal. Well, we must suppose that precisely the same thing happens to a man's outlook and personality.
b When the laws under which people are brought up have by some heaven-sent good fortune remained unchanged over a very long period, so that no one remembers or has heard of things ever being any different, the soul is filled with such respect for tradition that it shrinks from meddling with it in any way. Somehow or other the legislator must find a method of bringing about this situation in the state. Now here's my own solution of the problem. All legislators suppose that an alteration to children's
c games really is just a 'game', as I said before, which leads to no serious or genuine damage. Consequently, so far from preventing change, they

feebly give it their blessing. They don't appreciate that if children introduce novelties into their games, they'll inevitably turn out to be quite different people from the previous generation; being different, they'll demand a different kind of life, and that will then make them want new institutions and laws. The next stage is what we described just now as the biggest evil that can affect a state—but not a single legislator takes fright at the prospect. d
Other changes, that affect only deportment, will do less harm, but it is a very serious matter indeed to keep changing the criteria for praising or censuring a man's moral character, and we must take great care to avoid doing so.

CLINIAS: Of course.

ATHENIAN: Well then, are we still happy about the line we took earlier, when we said that rhythms and music in general were means of representing the characters of good men and bad? Or what? e

CLINIAS: Yes, our view remains exactly the same.

ATHENIAN: So our position is this: we must do everything we possibly can to distract the younger generation from wanting to try their hand at presenting new subjects, either in dance or song; and we must also stop pleasure-mongers seducing them into the attempt.

CLINIAS: You're absolutely right.

ATHENIAN: Now, does any of us know of a better method of achieving 799
such an object than that of the Egyptians?

CLINIAS: What method is that?

ATHENIAN: To *sanctify* all our dances and music. The first job will be to settle the festivals by drawing up the year's program, which should show the dates of the various holidays and the individual gods, children of gods, or spirits in whose honor they should be taken. Second, it has to be decided what hymn should be sung at the various sacrifices to the gods and the type of dancing that should dignify the ritual in question. These decisions b
should be taken by some authority or other, and then the whole body of the citizens together should ratify them by sacrificing to the Fates and all the other gods, and by pouring a libation to consecrate the various songs to their respective divinities and other powers.

22. If anybody disobeys and introduces any different hymns or dances in honor of any god,
the priests and priestesses, in association with the Guardians of the Laws, will have the backing of sacred and secular law in expelling him.

23. If he resists expulsion,
he must be liable to a charge of impiety for the rest of his life at the hands of anyone who wishes to bring it.

CLINIAS: And serve him right.

ATHENIAN: Now seeing that we've got on to this topic, we must watch c
our step and behave ourselves.

CLINIAS: How do you mean?

ATHENIAN: No young man, much less an old one, on seeing or hearing anything paradoxical or unfamiliar, is ever going to brush aside his doubts all in a hurry and reach a snap decision about it. More probably, like a
d traveler who has come to a crossroads, alone or with others, and is rather uncertain about the right road, he'll pause, and put the problem to himself or his companions; and he won't continue his journey until he's pretty sure of his direction and bearings. That's precisely what we must do now. Our discussion has led us to a legal paradox, and naturally we must go into it in details and not—at our age—rashly claim to pontificate in such an important field off the cuff.

CLINIAS: You're absolutely right.

e ATHENIAN: So we won't hurry over the problem, and only when we've looked into it properly shall we draw any firm conclusions. Still, there's no point in being deterred from completing the formal presentation of these 'laws' we're dealing with now, so let's press on till we get to the end of them. God willing, the completion of the whole exposition may perhaps point to an adequate solution of our present problem.

CLINIAS: You've put it very well, sir; let's do as you say.

ATHENIAN: So let's assume we've agreed on the paradox: our songs have turned into 'nomes' (apparently the ancients gave some such name to
800 tunes on the lyre—perhaps they had some inkling of what we're saying, thanks to the intuition of someone who saw a vision either in his sleep or while awake). However that may be, let's adopt this as our agreed policy: no one shall sing a note, or perform any dance-movement, other than those in the canon of public songs, sacred music, and the general body of chorus performances of the young—any more than he would violate any other 'nome' or law. If a man obeys, he shall go unmolested by the law; but if he disobeys, the Guardians of the Laws and the priests and priestesses must punish him, as we said just now. Can we accept this as a statement
b of policy?

CLINIAS: We can.

ATHENIAN: Then how could one put these rules in proper legal form, without being laughed to scorn? Well now, there's a new point we ought to notice: in this business, the safest method is to sketch a few model rules. Here's one for you: imagine a sacrifice has been performed and the offerings
c burnt as demanded by law and someone standing in a private capacity near the altar and offerings—a son or brother, say—breaks out into the most extreme blasphemy: wouldn't his words fill his father and his other relations with alarm and despondency and forebodings of despair? Isn't that what we'd expect?

CLINIAS: Of course.

ATHENIAN: But it is hardly an exaggeration to say that in our corner of the world this is exactly what happens in pretty nearly every state. When an official has performed a public sacrifice, a chorus—or rather a mob of

choruses—arrives and takes up position not far from the altar and sometimes right next to it. Then they swamp the holy offerings with a flood of absolute blasphemy. With words and rhythms and music of the most morbid kind they work up the emotions of their audience to a tremendous pitch, and the prize is awarded to the chorus which succeeds best in making the community burst into tears—the very community which has just offered sacrifice. Well, that's certainly a 'nome' on which we must pass an unfavorable verdict, isn't it? If there is ever any real need for the public to listen to such lugubrious noises, on days that are unclean and unlucky, it will be much better, and entirely appropriate, to hire some foreign choruses to sing such songs (just as one hires mourners to accompany funerals with Carian dirges). In particular, the costume appropriate for such funeral dirges will not be garlands or trappings of gilt, but—to polish off the topic as quickly as possible—quite the opposite kind of thing. I merely repeat the question we're always asking ourselves: are we happy to adopt this, for a start, as one of our model rules of singing?

CLINIAS: What?

ATHENIAN: The rule of auspicious language. This is the characteristic that is absolutely vital for our kind of song. Or shall I simply lay down the rule without repeating the question?

CLINIAS: Lay it down by all means: your law's been approved without a single vote against it.

ATHENIAN: After auspicious language, then, what will be the second law of music? Surely this: that the gods to whom we sacrifice should always be offered our prayers.

CLINIAS: Of course.

ATHENIAN: And the third law, I suppose, will be this: poets should appreciate that prayers are requests for something from the gods, so they must take great care that they never inadvertently request an evil under the impression that it is a benefit. What a ludicrous calamity it would be to offer that kind of prayer!

CLINIAS: It certainly would.

ATHENIAN: Now didn't our remarks a short time ago[11] persuade us that 'Gold and Silver, the gods of Wealth, ought to have neither temple nor home in our state'?

CLINIAS: Absolutely.

ATHENIAN: So what lesson can we say this doctrine holds for us? Surely this: that authors in general are quite unable to tell good from bad. We conclude that a composer who embodies this error in his words or even in his music, and who produces mistaken prayers, will make our citizens pray improperly when it comes to matters of importance—and, as we were saying, we shan't find many more glaring mistakes than that. So can we establish this as one of our model laws of music?

11. See 727e ff., 741e ff.

CLINIAS: What?

d ATHENIAN: That a poet should compose nothing that conflicts with society's conventional notions of justice, goodness and beauty. No one should be allowed to show his work to any private person without first submitting it to the appointed assessors and to the Guardians of the Laws, and getting their approval. (In effect, we've got our assessors already appointed—I mean the legislators we chose to regulate the arts, and the person we elected as Minister of Education.) Well then, here's the same question yet again: are we satisfied to adopt this as our third principle and our third model law? Or what do you think?

CLINIAS: Of course we'll adopt it.

e ATHENIAN: The next point is that it will be proper to sing hymns and panegyrics, combined with prayers, in honor of the gods. After the gods, we may similarly give the spirits and heroes their meed of praise, and pray to each of them as appropriate.

CLINIAS: Certainly.

ATHENIAN: And the next law, which should be adopted quite ungrudgingly, will run as follows: deceased citizens who by their physical efforts or force of personality have conspicuous and strenuous achievements to their credit, and who have lived a life of obedience to the laws, should be regarded as proper subjects for our panegyrics.

CLINIAS: Of course.

802 ATHENIAN: But to honor a man with hymns and panegyrics during his lifetime is to invite trouble: we must wait until he has come to the end of the course after running the race of life successfully. (Men and women who have shown conspicuous merit should qualify for all these honors without distinction of sex.)

The following arrangements should be made with regard to singing and dancing. Among the works we've inherited from the past there are a great many grand old pieces of music—dances too, for occasions when we want to exercise our bodies—from which we should not hesitate to choose those

b suitable and appropriate for the society we are organizing. Censors of at least fifty years of age should be appointed to make the selection, and any ancient composition that seems to come up to standard should be approved; absolutely unsuitable material must be totally rejected, and substandard pieces revised and re-arranged, on the advice of poets and musicians. (Although we shall exploit the creative talents of these people, we

c shan't—with rare exceptions—put our trust in their tastes and inclinations. Instead, we shall interpret the wishes of the lawgiver and arrange to *his* liking our dancing and singing and chorus performances in general.) Music composed in an undisciplined style is always infinitely improved by the imposition of form, even if that makes it less immediately attractive. But music doesn't *have* to be disciplined to be pleasant. Take someone who has right from childhood till the age of maturity and discretion grown familiar with a controlled and restrained style of music. Play him some

d of the other sort, and how he'll loathe it! 'What vulgar stuff!' he'll say.

Yet, if he's been brought up to enjoy the strong appeal of popular music, it's the disciplined kind he'll call frigid and repellent. So as I said just now, on the score of pleasure or the lack of it, neither type is superior nor inferior to the other. The difference is simply this: the one musical environment is invariably a good influence, the other a bad.

CLINIAS: Well said!

ATHENIAN: In addition, we shall have to distinguish, in a rough and ready way, the songs suitable for men and those suitable for women, and e
give each its proper mode and rhythm. It would be terrible if the words failed to fit the mode, or if their meter were at odds with the beat of the music, which is what will happen if we don't match properly the songs to each of the other elements in the performance—elements which must therefore be dealt with, at any rate in outline, in our legal code. One possibility is simply to ensure that the songs men and women sing are accompanied by the rhythms and modes imposed by the words in either case; but our regulations about female performances must be more precise than this and be based on the natural difference between the sexes. So an elevated manner and courageous instincts must be regarded as characteristic of the male, while a tendency to modesty and restraint must be presented—in theory and law alike—as a peculiarly feminine trait.

Now to deal with how this doctrine should be taught and handed on. 803
What method of instruction should we use? Who should be taught, and when should the lessons take place? Well, you know that when a shipwright is starting to build a boat, the first thing he does is to lay down the keel as a foundation and as a general indication of the shape. I have a feeling my own procedure now is exactly analogous. I'm trying to distinguish for you the various ways in which our character shapes the kind of life we live; I really am trying to 'lay down the keel', because I'm giving proper consideration to the way we should try to live—to the 'character- b
keel' we need to lay if we are going to sail through this voyage of life successfully. Not that human affairs are worth taking very seriously—but take them seriously is just what we are forced to do, alas. Still, perhaps it will be realistic to recognize the position we're in and direct our serious efforts to some suitable purpose. My meaning?—yes, you'd certainly be right to take me up on that.

CLINIAS: Exactly. c

ATHENIAN: I maintain that serious matters deserve our serious attention, but trivialities do not; that all men of good will should put God at the center of their thoughts; that man, as we said before,[12] has been created as a toy for God; and that this is the great point in his favor. So every man and every woman should play this part and order their whole life accordingly, engaging in the best possible pastimes—in a quite different frame of mind to their present one.

CLINIAS: How do you mean? d

12. See 644d ff.

ATHENIAN: The usual view nowadays, I fancy, is that the purpose of serious activity is leisure—that war, for instance, is an important business, and needs to be waged efficiently for the sake of peace. But in cold fact neither the immediate result nor the eventual consequences of warfare ever turn out to be *real* leisure or an education that really deserves the name—and education is in our view just about the most important activity of all. So each of us should spend the greater part of his life at peace, and
e that will be the best use of this time. What, then, will be the right way to live? A man should spend his whole life at 'play'—sacrificing, singing, dancing—so that he can win the favor of the gods and protect himself from his enemies and conquer them in battle. He'll achieve both these aims if he sings and dances in the way we've outlined; his path, so to speak, has been marked out for him and he must go on his way confident that the poet's words are true.

804 *Some things, Telemachus, your native wit will tell you,*
And Heaven will prompt the rest. The very gods, I'm sure,
Have smiled upon your birth and helped to bring you up.[13]

And those *we* bring up, too, must proceed in the same spirit. They must expect that although our advice is sound as far as it goes, their guardian deity will make them further suggestions about sacrifices and dancing—
b telling them the various divinities in whose honor they should hold their various games, and on what occasions, so as to win the gods' good will and live the life that their own nature demands, puppets that they are, mostly, and hardly real at all.

MEGILLUS: That, sir, is to give the human race a very low rating indeed.

CLINIAS: Don't be taken aback, Megillus. You must make allowances for me. I said that with my thoughts on God, and was quite carried away. So, if you like, let's take it that our species is *not* worthless, but something
c rather important.

To resume, then. So far, we have provided for the public gymnasia and the state schools to be housed in three groups of buildings at the center of the city; similarly, on three sites in the suburbs, there should be training grounds for horses, and open spaces adapted for archery and the discharge of other long-range missiles, where the young may practice and learn these skills. Anyway, if we haven't explained all this adequately before, let's do so now, and put our requirements into legal form.

d Foreign teachers should be hired to live in these establishments and provide the pupils with complete courses of instruction in both military and cultural subjects. Children must not be allowed to attend or not attend school at the whim of their father; as far as possible, education must be

13. *Odyssey* iii.26–28.

compulsory for 'every man and boy' (as the saying is), because they belong to the state first and their parents second.

Let me stress that this law of mine will apply just as much to girls as to boys. The girls must be trained in precisely the same way, and I'd like e
to make this proposal without any reservations whatever about horse-riding or athletics being suitable activities for males but not for females. You see, although I was already convinced by some ancient stories I have heard, I now know for sure that there are pretty well countless numbers of women, generally called Sarmatians, round the Black Sea, who not only 805
ride horses but use the bow and other weapons. There, men and women have an equal duty to cultivate these skills, so cultivate them equally they do. And while we're on the subject, here's another thought for you. I maintain that if these results can be achieved, the state of affairs in our corner of Greece, where men and women do *not* have a common purpose and do *not* throw all their energies into the same activities, is absolutely stupid. Almost every state, under present conditions, is only half a state, and develops only half its potentialities, whereas with the same cost and effort, it could double its achievement. Yet what a staggering blunder for b
a legislator to make!

CLINIAS: I dare say. But a lot of these proposals, sir, are incompatible with the average state's social structure. However, you were quite right when you said we should give the argument its head, and only make up our minds when it had run its course. You've made me reproach myself for having spoken. So carry on, and say what you like. c

ATHENIAN: The point I'd like to make, Clinias, is the same one as I made a moment ago, that there might have been something to be said against our proposal, if it had not been proved by the facts to be workable. But as things are, an opponent of this law must try other tactics. We are not going to withdraw our recommendation that so far as possible, in education and everything else, the female sex should be on the same footing as the d
male. Consequently, we should approach the problem rather like this. Look: if women are *not* to follow absolutely the same way of life as men, then surely we shall have to work out some other program for them?

CLINIAS: Inevitably.

ATHENIAN: Well then, if we deny women this partnership we're now prescribing for them, which of the systems actually in force today shall we adopt instead? What about the practice of the Thracians and many other peoples, who make their women work on the land and mind sheep and cattle, so that they turn into skivvies indistinguishable from slaves? e
Or what about the Athenians and all the other states in that part of the world? Well, here's how we Athenians deal with the problem: we 'concentrate our resources', as the expression is, under one roof, and let our women take charge of our stores and the spinning and wool-working in general. Or we could adopt the Spartan system, Megillus, which is a compromise. You make your girls take part in athletics and you give them a compulsory 806

education in the arts; when they grow up, though dispensed from working wool, they have to 'weave' themselves a pretty hard-working sort of life which is by no means despicable or useless: they have to be tolerably efficient at running the home and managing the house and bringing up children—but they *don't* undertake military service. This means that even if some extreme emergency ever led to a battle for their state and the lives
b of their children, they wouldn't have the expertise to use bows and arrows, like so many Amazons, nor could they join the men in deploying any other missile. They wouldn't be able to take up shield and spear and copy Athena,[14] so as to terrify the enemy (if nothing more) by being seen in some kind of battle-array gallantly resisting the destruction threatening their native land. Living as they do, they'd never be anything like tough enough to imitate the Sarmatian women, who by comparison with such
c femininity would look like men. Anyone who wants to commend your Spartan legislators for this state of affairs, had better get on with it: I'm not going to change *my* mind. A legislator should go the whole way and not stick at half-measures; he mustn't just regulate the men and allow the women to live as they like and wallow in expensive luxury. That would be to give the state only half the loaf of prosperity instead of the whole of it.

MEGILLUS: What on earth are we to do, Clinias? Are we going to let our visitor run down Sparta for us like this?

d CLINIAS: Yes, we are. We told him he could be frank, and we must give him his head until we've properly worked through every section of our legal code.

MEGILLUS: Very well.

ATHENIAN: So I suppose I should try to press straight on with the next topic?

CLINIAS: Naturally.

ATHENIAN: Now that our citizens are assured of a moderate supply of necessities, and other people have taken over the skilled work, what will
e be their way of life? Suppose that their farms have been entrusted to slaves, who provide them with sufficient produce of the land to keep them in modest comfort; suppose they take their meals in separate messes, one for themselves, another nearby for their families, including their daughters and their daughters' mothers; assume the messes, are presided over by officials, male and female as the case may be, who have the duty of dismissing their respective assemblies after the day's review and scrutiny
807 of the diners' habits; and that when the official and his company have poured libations to whatever gods that day and night happen to be dedicated, they all duly go home. Now, do such leisured circumstances leave them no pressing work to do, no genuinely appropriate occupation? Must each of them get plumper and plumper every day of his life, like a fatted

14. A reference to 796b–c.

beast? No: we maintain that's *not* the right and proper thing to do. A man who lives like that won't be able to escape the fate he deserves; and the fate of an idle fattened beast that takes life easy is usually to be torn to pieces b
by some other animal—one of the skinny kind, who've been emaciated by a life of daring and endurance. (Our ideal, of course, is unlikely to be realized *fully* so long as we persist in our policy of allowing individuals to have their own private establishments, consisting of house, wife, children and so on.[15] But if we could ever put into practice the second-best scheme we're now describing, we'd have every reason to be satisfied.) So we must insist that there is something left to do in a life of leisure, and it's only c
fair that the task imposed, far from being a light or trivial one, should be the most demanding of all. As it is, to dedicate your life to winning a victory at Delphi or Olympia keeps you far too busy to attend to other tasks; but a life devoted to the cultivation of every physical perfection *and* every moral virtue (the only life worth the name) will keep you at least d
twice as busy. Inessential business must never stop you taking proper food and exercise, or hinder your mental and moral training. To follow this regimen and to get the maximum benefit from it, the whole day and the whole night is scarcely time enough.

In view of this, every gentleman must have a timetable prescribing what e
he is to do every minute of his life, which he should follow at all times from the dawn of one day until the sun comes up at the dawn of the next. However, a lawgiver would lack dignity if he produced a mass of details about running a house, especially when he came to the regulations for curtailing sleep at night, which will be necessary if the citizens are going to protect the entire state systematically and uninterruptedly. Everyone should think it a disgrace and unworthy of a gentleman, if any citizen devotes the whole of any night to sleep; no, he should always be the first to wake and get up, and let himself be seen by all the servants. (It doesn't 808
matter what we ought to call this kind of thing—either 'law' or 'custom' will do.) In particular, the mistress of the house should be the first to wake up the other women; if she herself is woken by some of the maids, then all the slaves—men, women and children—should say 'How shocking!' to one another, and so too, supposing they could, should the very walls b
of the house. While awake at night, all citizens should transact a good proportion of their political and domestic business, the officials up and down the town, masters and mistresses in their private households. By nature, prolonged sleep does not suit either body or soul, nor does it help us to be active in all this kind of work. Asleep, a man is useless; he may as well be dead. But a man who is particularly keen to be physically active c
and mentally alert stays awake as long as possible, and sets aside for sleep only as much time as is necessary for his health—and that is only a little, once that little has become a regular habit. Officials who are wide awake

15. Reading *nun ei* in b3.

at night in cities inspire fear in the wicked, whether citizens or enemies, but by the just and the virtuous they are honored and admired; they benefit themselves and are a blessing to the entire state. And an additional advantage of spending the night in this way will be the courage thus inspired in individual members of the state.

d When dawn comes up and brings another day, the children must be sent off to their teachers. Children must not be left without teachers, nor slaves without masters, any more than flocks and herds must be allowed to live without attendants. Of all wild things, the child is the most unmanageable: an unusually powerful spring of reason, whose waters are not e yet canalized in the right direction, makes him sharp and sly, the most unruly animal there is. That's why he has to be curbed by a great many 'bridles', so to speak. Initially, when he leaves the side of his nurse and mother, and is still young and immature, this will be his tutor's duty, but later on it will devolve on his instructors in the various subjects—subjects which will be an extra discipline in themselves. So far, he will be treated as a young gentleman deserves. However, both the boy and his tutor or teacher must be punished by any passing gentleman who finds either of them misbehaving, and here the child must be treated as though he were a slave.

24. Any passer-by who fails to inflict due punishment,
must for a start be held in the deepest disgrace, and the Guardian of
809 the Laws who has been put in charge of the young must keep under observation this fellow who has come across miscreants of the kind we mentioned and has either failed to inflict the necessary punishment, or not inflicted it in the approved fashion.

Our sharp-eyed and efficient supervisor of the education of the young must redirect their natural development along the right lines, by always setting them on the paths of goodness as embodied in the legal code.

b But how will the law itself adequately convey its teaching to this Guardian? So far, the instruction he has had from the law has been cursory and obscure, because only a selection of topics has been covered. But nothing, as far as possible, should be omitted; the Guardian should have every point explained to him so that he in turn may enlighten and educate others. Now, the business of choruses has already been dealt with: we've seen what types of song and dance should be selected or revised, and then consecrated. But what type of *prose* works should be put in front of your pupils? How should they be presented? Now here, my dear Director of c Youth, is something we've not explained. Of course, we've told you what military skills they must practice and learn, but what about (a) literature, (b) playing the lyre, (c) arithmetic? We stipulated that they must each understand enough of these subjects to fight a war and run a house and administer a state; for the same reasons they must acquire such knowledge about the heavenly bodies in their courses—sun, moon and stars—as will

help them with the arrangements that every state is forced to make in this d
respect. You ask what arrangements we are referring to? We mean that the days must be grouped into months, and the months into years, in such a way that the seasons, along with their various sacrifices and festivals, may each receive proper recognition by being duly observed in their natural sequence. The result will be to keep the state active and alert, to render the gods due honor, and to make men better informed on these matters. All this, my friend, has not yet been adequately explained to you by the e
legislator. So pay attention to the points which are going to be made next.

We said that you have insufficient information about literature, for a start. Now, what's our complaint against the instructions you were given? It's simply that you've not yet been told whether a *complete* mastery of the subject is necessary before one can become a decent citizen or whether one shouldn't attempt it at all; and similarly in the case of the lyre. Well, we maintain that these subjects do have to be tackled. About three years will be a reasonable time for a child of ten to spend on literature, and a further three years, beginning at the age of thirteen, should be spent on 810
learning the lyre. These times must be neither shortened nor lengthened: neither the child nor its father must be allowed to extend or curtail these periods of study out of enthusiasm for, or distaste of, the curriculum; that will be against the law.

25. Cases of disobedience must be punished by disqualification from the school prizes we shall have to describe a little later.

First, though, you yourself must grasp just what must be taught by the teachers and learned by the pupils in those periods of time. Well, the b
children must work at their letters until they are able to read and write, but any whose natural abilities have not developed sufficiently by the end of the prescribed time to make them into quick or polished performers should not be pressed.

The question now arises of the study of written works which the authors have not set to music. Although some of these works are in meter, others lack any rhythmical pattern at all—they are writings that simply reproduce ordinary speech, unadorned by rhythm and music. Some of the many c
authors of such works have left us writings that constitute a danger. Now, my splendid Guardians of the Laws, how are you going to deal with these works? What will be the right instructions for the lawgiver to give you about coping with them? I reckon he's going to be very much at a loss.

CLINIAS: What is the difficulty you're talking about, sir? It looks as if you're faced by a genuine personal problem.

ATHENIAN: Your assumption is quite right, Clinias. But the two of you are my partners in legislation, and I'm obliged to tell you when I think I anticipate a difficulty and when I do not.

CLINIAS: Oh? What makes you bring up that aspect of the business at d
this point? What's the matter?

ATHENIAN: I'll tell you: the idea of contradicting many thousands of voices. That's always difficult.

CLINIAS: Well, bless my soul! Do you really imagine that your existing legislative proposals flout popular prejudices in just a few tiny details?

ATHENIAN: Yes, that's fair comment. The point you're making, I take it, is that although a lot of people set their face against the path we are following in our discussion, just as many are enthusiastic about it (or even
e if they *are* fewer in number, they're not inferior in quality)—and you're telling me to rely on the support of the latter and proceed with boldness and resolution along the legislative path opened up for us by our present discussion, and not to hang back.

CLINIAS: Naturally.

ATHENIAN: Best foot forward, then. Now, what I say is this. We have a great many poets who compose in hexameters and trimeters and all the standard meters; some of these authors try to be serious, while others aim at a comic effect. Over and over again it's claimed that in order to educate young people properly we have to cram their heads full of this stuff; we
811 have to organize recitations of it so that they never stop listening to it and acquire a vast repertoire, getting whole poets off by heart. Another school of thought excerpts the outstanding work of all the poets and compiles a treasury of complete passages, claiming that if the wide knowledge of a fully informed person is to produce a sound and sensible citizen, these extracts must be committed to memory and learned by rote. I suppose you're now pressing me to be quite frank and show these people where they are right and where they've gone wrong?

CLINIAS: Of course.

b ATHENIAN: Well then, in a nutshell, what sort of estimate will do them all justice? I imagine everybody would agree if I put it rather like this. Each of these authors has produced a lot of fine work, and a lot of rubbish too—but if that's so, I maintain that learning so much of it puts the young at risk.

CLINIAS: So what recommendation would you give the Guardian of the Laws?

ATHENIAN: What about?

CLINIAS: The model work that will enable him to decide what material
c all the children may learn, and what not. Tell us, without any hesitation.

ATHENIAN: My dear Clinias, I suspect I've had a bit of luck.

CLINIAS: How's that?

ATHENIAN: Because I haven't got far to look for a model. You see, when I look back now over this discussion of ours, which has lasted from dawn up till this very moment—a discussion in which I think I sense the inspiration of heaven—well, it's come to look, to my eyes, just like a literary composition. Perhaps not surprisingly, I was overcome by a feeling of
d immense satisfaction at the sight of my 'collected works', so to speak, because, of all the addresses I have ever learned or listened to, whether in verse or in this kind of free prose style I've been using, it's *these* that

have impressed me as being the most eminently acceptable and the most entirely appropriate for the ears of the younger generation. So I could hardly commend a better model than this to the Guardian of the Laws in charge of education. Here's what he must tell the teachers to teach the children, and if he comes across similar and related material while working e
through prose writings, or the verse of poets, or when listening to unwritten compositions in simple prose that show a family resemblance to our discussion today, he must on no account let them slip through his fingers, but have them committed to writing. His first job will be to compel the teachers to learn this material and speak well of it, and he must not employ as his assistants any teachers who disapprove of it; he should employ only those who endorse his own high opinion, and entrust them with the teaching 812
and education of the children. That, then, is my doctrine on literature and its teachers, so let me finish there.

CLINIAS: Well, sir, as far as I can judge from our original program, we've not strayed off the subjects we set out to discuss. But is our general policy the right one, or not? I suspect it would be difficult to say for sure.

ATHENIAN: That, Clinias, as we have often remarked, is something which will probably become clearer of its own accord when we've completely finished expounding our laws.

CLINIAS: True enough. b

ATHENIAN: After the teacher of literature, surely, we have to address the lyre-master?

CLINIAS: Of course.

ATHENIAN: Now when we allocate these masters the duties of teaching this instrument and giving instruction in the subject in general, I think we ought to remember the line we took earlier.

CLINIAS: What line do you mean?

ATHENIAN: We said[16] I think, that the sixty-year-old singers of Dionysus should be persons who are particularly sensitive to rhythm and the way in which 'harmonies' are constructed, so that when faced with good or c
vicious musical representations, and the emotions aroused by them, they may be able to select the works based on good representation and reject those based on bad. The former they should present and sing to the community at large, so as to charm the souls of the young people, encouraging each and every one of them to let these representations guide them along the path that leads to virtue.

CLINIAS: You're absolutely right.

ATHENIAN: With this object in view, here's how the lyre-master and his d
pupil must employ the notes of their instruments. By exploiting the fact that each string makes a distinct sound, they must produce notes that are identical in pitch to the words being sung. The lyre should not be used to play an elaborate independent melody: that is, its strings must produce no notes except those of the composer of the melody being played; small

16. See 644b ff. and 669b ff.

intervals should not be combined with large, nor quick tempo with slow,
e nor low notes with high. Similarly, the rhythms of the music of the lyre must not be tricked out with all sorts of frills and adornments. All this sort of thing must be kept from students who are going to acquire a working knowledge of music in three years, without wasting time. Such conflict and confusion makes learning difficult, whereas the young people should above all be swift learners, because they have a great many important compulsory subjects laid down for them as it is—and in due time, as our discussion progresses, we shall see what these subjects are. But all these musical matters should be controlled, according to his brief, by our official in charge of education. As regards the actual singing, and the words, we have explained earlier what tunes and style of language the
813 chorus-masters must teach: we said—remember?—that these things should be consecrated and each allocated to a suitable festival, so as to benefit society by the welcome pleasure they give.

CLINIAS: Here again you've spoken the truth —

ATHENIAN: — the whole truth and nothing but the truth! So these are the regulations the person appointed as our Director of Music must adopt and enforce: let's wish him the best of luck in his task.

b We, however, must supplement our previous regulations about dancing and the training of the body in general. We've filled in the gaps in our tuition in the case of music, so now let's deal with physical training in the same way. Both boys and girls, of course, must learn to dance and perform physical exercises?

CLINIAS: Yes.

ATHENIAN: So it won't come amiss if we provide dancing masters for the boys and dancing mistresses for the girls, so as to facilitate practice.

CLINIAS: Agreed.

c ATHENIAN: So now let's summon once again the official that has the hardest job of all—the Director of Children. He'll be in charge both of music and of physical training, so he won't get much time off.

CLINIAS: How then will a man of his advancing years be able to supervise so much?

ATHENIAN: There is no problem here, my friend. The law has already given him permission, which it will not withdraw, to recruit as assistant supervisors any citizens he may wish, of either sex. He will know whom
d to choose, and a sober respect for his office and a realization of its importance will make him anxious not to choose wrongly, because he'll be well aware that only if the younger generation has received and goes on receiving a correct education shall we find everything is 'plain sailing', whereas if not—well, it would be inappropriate to describe the consequences, and as the state is young we shall refrain from doing so, out of respect for the feelings of the excessively superstitious.

Well then, on these topics too—I mean dances and the entire range of movements involved in physical training—we have already said a great

deal. We are establishing gymnasia for all physical exercises of a military kind—archery and deployment of missiles in general, skirmishing, heavy- e
armed fighting of every variety, tactical maneuvers, marches of every sort, pitching camp, and also the various disciplines of the cavalryman. In all these subjects there must be public instructors paid out of public funds; their lessons must be attended by the boys and men of the state, and the girls and women as well, because they too have to master all these techniques. While still girls, they must practice every kind of dancing and fighting in armor; when grown women, they must play their part in maneuvering, getting into battle formation and taking off and putting on weapons, 814
if only to ensure that if it ever proves necessary for the whole army to leave the state and take the field abroad, so that the children and the rest of the population are left unprotected, the women will at least be able to defend them. On the other hand—and this is one of those things we can't swear is impossible—suppose a large and powerful army, whether Greek or not, were to force a way into the country and make them fight a desperate battle for the very existence of the state. It would be a disaster for their society if its women proved to have been so shockingly ill-educated that b
they couldn't even rival female birds, who are prepared to run every risk and die for their chicks fighting against the most powerful of wild animals. What if, instead of that, the women promptly made off to temples and thronged every altar and sanctuary, and covered the human race with the disgrace of being by nature the most lily-livered creatures under the sun?

CLINIAS: By heaven, sir, no state in which that happened could avoid disgrace—quite apart from the damage that would be caused. c

ATHENIAN: So let's lay down a law to the effect that women must not neglect to cultivate the techniques of fighting, at any rate to the extent indicated. These are skills which all citizens, male and female, must take care to acquire.

CLINIAS: That gets my vote, at least.

ATHENIAN: Now for wrestling. We've partly dealt with this already, but we haven't described what in my eyes is its most important feature. But it's not easy to find words to explain it unless at the same time someone gives an actual demonstration with his body. So we'll postpone a decision on this point till we can support our statements with concrete examples d
and prove, among other points we've mentioned, that of all physical movements, those involved in our kind of wrestling are the most closely related to those demanded in warfare, and in particular that we should practice wrestling for the sake of military efficiency, rather than cultivate the latter in order to be better wrestlers.

CLINIAS: You're right in that, at least.

ATHENIAN: So let's accept what we've said so far as an adequate statement of what wrestling can do for a man. The proper term for most of the other e
movements that can be executed by the body as a whole is 'dancing'. Two varieties, the decent and the disreputable, have to be distinguished. The

first is a representation of the movements of graceful people, and the aim is to create an effect of grandeur; the second imitates the movements of unsightly people and tries to present them in an unattractive light. Both have two subdivisions. The first subdivision of the decent kind represents handsome, courageous soldiers locked in the violent struggles of war; the second portrays a man of temperate character enjoying moderate pleasures
815 in a state of prosperity, and the natural name for this is 'dance of peace'. The dance of war differs fundamentally from the dance of peace, and the correct name for it will be the 'Pyrrhic'. It depicts the motions executed to avoid blows and shots of all kinds (dodging, retreating, jumping into the air, crouching); and it also tries to represent the opposite kind of motion, the more aggressive postures adopted for shooting and discharging javelins and delivering various kinds of blows. In these dances, which portray fine
b physiques and noble characters, the correct posture is maintained if the body is kept erect in a state of vigorous tension, with the limbs extended nearly straight. A posture with the opposite characteristics we reject as *not* correct. As for the dance of peace, the point we have to watch in every chorus-performer is this: how successfully—or how disastrously—does he keep up the fine style of dancing to be expected from men who've been brought up under good laws? This means we'd better distinguish the
c dubious style of dancing from the style we may accept without question. So can we define the two? Where should the line be drawn between them? 'Bacchic' dances and the like, which (the dancers allege) are a 'representation' of drunken persons they call Nymphs and Pans and Sileni and Satyrs, and which are performed during 'purifications' and 'initiations', are something of a problem: taken as a group, they cannot be termed either 'dances of peace' or 'dances of war', and indeed they resist all attempts to label them. The best procedure, I think, is to treat them as separate from 'war-
d dances' and 'dances of peace', and put them in a category of their own which a statesman may ignore as outside his province. That will entitle us to leave them on one side and get back to dances of peace and war, both of which undeniably deserve our attention.

Now, what about the non-combatant Muse? The dances she leads in honor of the gods and children of gods will comprise one broad category of dances performed with a sense of well-being. This is how we shall
e distinguish between the two forms this feeling may take: (1) the particularly keen pleasure felt by people who have emerged from trouble and danger to a state of happiness; (2) the quieter pleasures of those whose past good fortune has not only continued but increased. Now, take a man in either of these situations. The greater his pleasure the brisker his body's movements; more modest pleasures make his actions correspondingly less brisk. Again, the more composed the man's temperament, and the tougher he has been
816 trained to be, the more deliberate are his movements; on the other hand, if he's a coward and has not been trained to show restraint, his actions are wilder and his postures change more violently. And in general, when

a man uses his voice to talk or sing, he finds it very difficult to keep his body still. This is the origin of the whole art of dancing: the gestures that express what one is saying. Some of us make gestures that are invariably in harmony with our words, but some of us fail. In fact, one has only to reflect on many other ancient terms that have come down to us, to see b
that they should be commended for their aptness and accuracy. One such term describes the dances performed by those who enjoy prosperity and seek only moderate pleasures: it's just the right word, and whoever coined it must have been a real musician. He very sensibly gave all such dances the name *'emmeleiai'*,[17] and established two categories of approved dancing, the 'war-dance' (which he called 'Pyrrhic') and 'dance of peace' *('emmeleiai')*, c
thus giving each its apt and appropriate title. The lawgiver should give an outline of them, and the Guardian of the Laws should see where they are to be found; then, after hunting them out, he must combine the dance-sequences with the other musical elements, and allocate each sacrifice and feast in the calendar the style of dance that is appropriate. After thus consecrating the whole list of dances, he must henceforth refrain from altering any feature either of the dancing or the singing: the same state and the same citizens (who should all be the same sort of people, as d
far as possible), should enjoy the same pleasures in the same fashion: that is the secret of a happy and a blessed life.

So much for the way men of superior physique and noble character should perform in choruses of the kind we've prescribed. We are now obliged to examine and pronounce on the misshapen bodies and degraded outlook of those performers who have turned to producing ludicrous and comic effects by exploiting the opportunities for humorous mimicry offered by dialogue, song and dance. Now anyone who means to acquire a discern- e
ing judgment will find it impossible to understand the serious side of things in isolation from their ridiculous aspect, or indeed appreciate anything at all except in the light of its opposite. But if we intend to acquire virtue, even on a small scale, we can't be serious and comic too, and this is precisely why we must learn to recognize buffoonery, to avoid being trapped by our ignorance of it into doing or saying anything ridiculous when there's no call for it. Such mimicry must be left to slaves and hired aliens, and no one must ever take it at all seriously. No citizen or citizeness must be found learning it, and the performances must always contain some new twist. With that law, and that explanation of it, humorous 817
amusements—usually known as 'comedy'—may be dismissed.

But what about our 'serious' poets, as they're called, the tragedians? Suppose some of them were to come forward and ask us some such question as this: 'Gentlemen, may we enter your state and country, or not? And may we bring our work with us? Or what's your policy on this point?' What would be the right reply for us to make to these inspired geniuses? b

17. The key to the sequence of thought is that 'in harmony' (816a) = *emmelōs*.

This, I think: 'Most honored guests, we're tragedians ourselves, and our tragedy is the finest and best we can create. At any rate, our entire state has been constructed so as to be a "representation" of the finest and noblest life—the very thing we maintain is most genuinely a tragedy. So we are poets like yourselves, composing in the same *genre,* and your competitors as artists and actors in the finest drama, which true law alone has the
c natural powers to "produce" to perfection (of that we're quite confident). So don't run away with the idea that we shall ever blithely allow you to set up stage in the market-place and bring on your actors whose fine voices will carry further than ours. Don't think we'll let you declaim to women and children and the general public, and talk about the same practices as we do but treat them differently—indeed, more often than not, so as virtually to contradict us. We should be absolutely daft, and so would any
d state as a whole, to let you go ahead as we've described before the authorities had decided whether your work was fit to be recited and suitable for public performance or not. So, you sons of the charming Muses, first of all show your songs to the authorities for comparison with ours, and if your doctrines seem the same as or better than our own, we'll let you produce your plays; but if not, friends, that we can never do.'

e So as regards chorus performances in general and the question of learning a part in them, custom will march hand in hand with law—dealing with slaves and their masters separately, if you are agreeable.

CLINIAS: How could we fail to agree, at any rate for the moment?

ATHENIAN: For gentlemen three related disciplines still remain: (1) computation and the study of numbers; (2) measurements of lines, surfaces and solids; (3) the mutual relationship of the heavenly bodies as they
818 revolve in their courses. None of these subjects must be studied in minute detail by the general public, but only by a chosen few (and who they are, we shall say when the time comes, when our discussion is drawing to a close). But what about the man in the street? It would certainly be a disgrace for him to be ignorant of what people very rightly call the 'indispensable rudiments'; but it will be difficult—impossible, even—for him to make a minute study of the entire subject. However, we can't dispense with the basic necessities, which was probably the point in the mind of the coiner
b of that saying about God, to the effect that 'not even God will be found at odds with necessity'[18]—presumably divine necessities, because if you interpret the remark as referring to necessities in the mortal realm, as do most people who quote such things, it's by far the most naive remark that could be made.

CLINIAS: Well, then, sir, what necessities, divine rather than the other sort, are relevant to these studies?

18. Perhaps the poet Simonides (late sixth and early fifth century); see D. A. Campbell, *Greek Lyric* (Loeb), vol. III, pp. 434–37.

ATHENIAN: These, I think: the necessities of which at least *some* practical and theoretical knowledge will always be essential for every god, spirit c
or hero who means to take charge of human beings in a responsible fashion. A man, at any rate, will fall a long way short of such godlike standards if he can't recognize one, two and three, or odd and even numbers in general, or hasn't the faintest notion how to count, or can't reckon up the days and nights, and is ignorant of the revolutions of the sun and moon and the other heavenly bodies. It's downright stupid to expect that anyone who wants to make the slightest progress in the highest branches of knowl- d
edge can afford to ignore any of these subjects. But what parts of them should be studied, and how intensively, and when? Which topics should be combined, and which kept separate? How will they be synthesized? These are the first questions we have to answer, and then with these preliminary lessons to guide us we may advance to the remaining studies. This is the natural procedure enforced by the necessity with which we maintain no god contends now, or ever will.

CLINIAS: Yes, sir, those proposals of yours, put like that, seem natural e
and correct.

ATHENIAN: They certainly are, Clinias, but such a preliminary statement of them is difficult to put into legal form. If you like, we'll postpone more precise legislation till later.

CLINIAS: It looks to us, sir, as if you're deterred by the way our countrymen commonly neglect this sort of subject. But your fears are quite groundless, so try to tell us what you think, without keeping anything back on that account.

ATHENIAN: I am indeed deterred, for the reasons you mention, but I am 819
even more appalled at those who have actually undertaken those studies, but in the wrong manner. Total ignorance over an entire field is never dangerous or disastrous; much more damage is done when a subject is known intimately and in detail, but has been improperly taught.

CLINIAS: You're right.

ATHENIAN: So we should insist that gentlemen should study each of these b
subjects to at least the same level as very many children in Egypt, who acquire such knowledge at the same time as they learn to read and write. First, lessons in calculation have been devised for tiny tots to learn while they are enjoying themselves at play: they divide up a given number of garlands or apples among larger or smaller groups, and arrange boxers or wrestlers in an alternation of 'byes' and 'pairs', or in a sequence of either, and in the various further ways in which 'byes' and 'pairs' naturally succeed each other. An- c
other game the teachers play with them is to jumble up bowls of gold and bronze and silver and so on, or distribute whole sets of one material. In this way, as I indicated, they make the uses of elementary arithmetic an integral part of their pupils' play, so that they get a useful introduction to the art of marshaling, leading and deploying an army, or running a household; and in general they make them more alert and resourceful persons. Next, the

d teacher puts the children on to measuring lengths, surfaces and solids—a study which rescues them from the deep-rooted ignorance, at once comic and shocking, that all men display in this field.

CLINIAS: What sort of ignorance do you mean, in particular?

ATHENIAN: My dear Clinias, even I took a very long time to discover mankind's plight in this business; but when I did, I was amazed, and could scarcely believe that human beings could suffer from such swinish
e stupidity. I blushed not only for myself, but for Greeks in general.

CLINIAS: Why so? Go on, sir, tell us what you're getting at.

ATHENIAN: I'll explain—or rather, I'll make my point by asking you a few questions. Here's a simple one: you know what's meant by a 'line', I suppose?

CLINIAS: Of course.

ATHENIAN: Very well. What about 'surface'?

CLINIAS: Surely.

ATHENIAN: You appreciate that these are two distinct things, and that 'volume' is a third?

CLINIAS: Naturally.

ATHENIAN: And you regard all these as commensurable?

CLINIAS: Yes.

ATHENIAN: And one length, I suppose, is essentially expressible in terms
820 of another length, one surface in terms of another surface, and one volume in terms of another volume?

CLINIAS: Exactly.

ATHENIAN: Well, what if some of these can't be thus expressed, either 'exactly' or approximately. What if some can, and some cannot, in spite of your thinking they *all* can? What do you think of your ideas on the subject now?

CLINIAS: They're worthless, obviously.

ATHENIAN: What about the relationship of line and surface to volume, or surface and line to each other? Don't all we Greeks regard them as in some sense commensurable?

b CLINIAS: We certainly do.

ATHENIAN: But if, as I put it, 'all we Greeks' believe them to be commensurable when fundamentally they are *in*commensurable, one had better address these people as follows (blushing the while on their behalf): 'Now then, most esteemed among the Greeks, isn't this one of those subjects we said[19] it was disgraceful not to understand—not that a knowledge of the basic essentials was much to be proud of?'

CLINIAS: Of course.

ATHENIAN: Now there are a number of additional and related topics
c which are a fertile breeding-ground for mistakes similar to those we've mentioned.

19. Reading *ephamen* in b5.

CLINIAS: What sort of topics?

ATHENIAN: The real relationship between commensurables and incommensurables. We must be very poor specimens if on inspection we can't tell them apart. These are the problems we ought to keep on putting up to each other, in a competitive spirit, when we've sufficient time to do them justice; and it's a much more civilized pastime for old men than checkers.

CLINIAS: Perhaps so. Come to think of it, checkers is not radically different d
from such studies.

ATHENIAN: Well, Clinias, I maintain that these subjects are what the younger generation should go in for. They do no harm, and are not very difficult: they can be learned in play, and so far from harming the state, they'll do it some good. But if anyone disagrees, we must listen to his case.

CLINIAS: Of course.

ATHENIAN: However, although obviously we shall sanction them if that proves to be their effect, we shall reject them if they seem to disappoint our expectations.

CLINIAS: Obviously indeed. No doubt about it. e

ATHENIAN: Well then, sir, so that our legal code shall have no gaps, let's regard these studies as an established but independent part of the desired curriculum—independent, that is, of the rest of the framework of the state, so that they can be 'redeemed' like 'pledges', in case the arrangements fail to work out to the satisfaction of us the depositors or you the pledgees.

CLINIAS: Yes, that's a fair way to present them.

ATHENIAN: Next, consider astronomy. Would a proposal to teach it to the young meet with your approval, or not?

CLINIAS: Just tell us what you think.

ATHENIAN: Now here's a very odd thing, that really is quite intolerable. 821

CLINIAS: What?

ATHENIAN: We generally say that so far as the supreme deity and the universe are concerned, we ought not to bother our heads hunting up explanations, because that is an act of impiety. In fact, precisely the opposite seems to be true.

CLINIAS: What's your point?

ATHENIAN: My words will surprise you, and you may well think them out of place on the lips of an old man. But it's quite impossible to keep quiet about a study, if one believes it is noble and true, a blessing to society and pleasing in the sight of God. b

CLINIAS: That's reasonable enough, but what astronomy are we going to find of which we can say all that?

ATHENIAN: My dear fellows, at the present day nearly all we Greeks do the great gods—Sun and Moon—an injustice.

CLINIAS: How so?

ATHENIAN: We say that they, and certain other heavenly bodies with them, never follow the same path. Hence our name for them: 'planets.'[20]

c CLINIAS: Good heavens, sir, that's absolutely right. In the course of my life I've often seen with my own eyes how the Morning and the Evening Star, and a number of others, never describe the same course, but vary from one to another; and we all know that the sun and moon always move like that.[21]

ATHENIAN: Megillus and Clinias, this is precisely the sort of point about the gods of the heavens that I am insisting our citizens and young men
d must study, so as to learn enough about them all to avoid blasphemy, and to use reverent language whenever they sacrifice and offer up their pious prayers.

CLINIAS: Right enough—if it's possible, in the first place, to acquire the knowledge you mention. On the assumption that investigation will enable us to correct any errors in our present statements, I too agree that this subject must be studied, in view of its grandeur and importance. So do your level best to convince us of the case you're making, and we'll try to follow you and take in what you say.

e ATHENIAN: My point is not an easy one to appreciate, but it's not unduly difficult either, and won't take up a lot of time, as I'll prove to you by my ability to keep my explanation brief—even though it wasn't so very long ago, when I was no youngster, that I heard of these things. If the subject were difficult, I'd never be able to explain it to you, old men that we all are.

822 CLINIAS: You're right. But what is this subject you say is so wonderful, so suitable for young men to learn, yet unknown to us? Try to tell us that much about it, at any rate, as clearly as you can.

ATHENIAN: Yes, try I must. This belief, my dear fellows, that the moon and sun and other heavenly bodies do in fact 'wander', is incorrect: precisely the opposite is true. Actually, each of them perpetually describes just one fixed orbit, although it is true that to all appearances its path is always changing.
b Further, the quickest body is wrongly supposed to be the slowest, and vice versa. So if the facts are as stated, and we are in error, we're no better than spectators at Olympia would be, if they said that the fastest horse in the race or the fastest long-distance runner was the slowest, and the slowest the fastest, and composed panegyrics and songs extolling the loser as the winner. I don't suppose the praises showered on the runners would be at all apt or welcome to them—they're only men, after all! At Olympia, such
c a mistake would be merely ludicrous. But what are we to think of the

20. Greek *planēta,* lit. 'wanderers'.

21. Reading *tauta* in c5.

analogous theological errors we're committing nowadays? In this field such mistakes are not funny at all; and it certainly gives the gods no pleasure to have us spread false rumors about them.

CLINIAS: Very true—if you're right about the facts.

ATHENIAN: So if we can prove I *am* right, all such topics as these must be studied to the level indicated, but in the absence of proof they must be left alone. May we adopt this as agreed policy?

CLINIAS: Certainly. d

ATHENIAN: So it's high time to call a halt to our regulations about the subjects to be studied in the educational curriculum, and turn our attention to hunting and all that sort of thing. Here too we must adopt the same procedure as before, because the legislator's job is not done if he simply lays down laws and gets quit of the business. In addition to his legislation, he must provide something else, which occupies a sort of no-man's land between admonition and law. This is a point, of course, that we've come across often enough as we talked of this and that, as for instance when e we dealt with the training of very young children. We hold that although education at that level is certainly the sort of topic on which suggestions are needed, it would be plain silly to think of these suggestions as formal laws. Even when the actual laws and the complete constitution have been thus formally committed to writing, you don't exhaust the praises of a supremely virtuous citizen by saying 'Here's a good man for you, a devoted and utterly obedient servant of the laws'. Your praise will be more comprehensive if you can say, 'He's a good man because he has given a lifetime of unswerving obedience to the written words of the legislator, whether they took the form 823 of a law, or simply expressed approval or disapproval'. There is no truer praise of a citizen than that. The real job of the legislator is not only to write his laws, but to blend into them an explanation of what he regards as respectable and what he does not, and the perfect citizen must be bound by these standards no less than by those backed by legal sanctions.

We can cite our present subject as a kind of witness to demonstrate the point more clearly. You know how 'hunting' takes a great many forms, b almost all of which are nowadays covered by this one term. There is a variety of ways of hunting water animals, and the same goes for the birds of the air, and the animals that live on land too—and not only the wild ones, either: we also have to take into account the hunting of men, not merely by their enemies in war (such as the raids carried out by robbers and the pursuit of army by army), but by their lovers, who 'pursue' their quarry for many different reasons, some admirable, some execrable. When the legislator comes to lay down his laws about hunting he cannot c leave all this unexplained, but neither can he produce a set of menacing regulations by imposing rules and punishments for all cases. So how are we going to tackle this kind of thing? He—the legislator—having asked himself 'Are these suitable exercises and activities for the young, or not?',

must then approve or condemn the various forms of hunting. The young men, for their part, must listen to the lawgiver and obey him, without being seduced by the prospect of pleasure or deterred by vigorous effort;
d and they should pay much more attention to carrying out warm recommendations than to the detailed threats and punishment of the formal law.

With those preliminaries, we may now put in due form our approval or disapproval of the various forms of hunting, commending the kind that is a good influence on the younger generation and censuring the other sort. So let's now follow up with a talk to the young people, and address them in this idealistic vein:

e 'Friends, we hope you'll never be seized by a desire or passion to fish in the sea or to angle or indeed to hunt water animals at all; and don't resort to creels, which a lazybones will leave to catch his prey whether he's asleep or awake. We hope you never feel any temptation to capture men on the high seas and take to piracy, which will make you into brutal hunters and outlaws; and we hope it never so much as occurs to you to turn thief in town or country. Nor should any young man ever be seduced by a fancy to trap birds—away with such an uncivilized desire! That leaves
824 only land animals for the athletes of our state to hunt and capture. Now sometimes this is done by what is called "night-hunting," when the participants, sluggards that they are, take it in turn to sleep. This sort of hunting is *not* to be recommended, nor is the sort that offers periods of rest from exertion, where the savage strength of the animals is subdued by nets and traps, rather than because a hunter who relishes the fight has got the better of them. All men who wish to cultivate the "divine"[22] courage have only one type of hunting left, which is the best: the capture of four-footed animals with the help of dogs and horses and by your own exertions, when you hunt in person and subdue all your prey by chasing and striking them and hurling weapons at them.'

This address may be taken as an explanation of what we approve and condemn in this entire business. Here's the actual law:

(1) No one should restrain these genuinely 'holy' hunters from taking their hounds where they like and as they like; but the night-trapper, who relies on nets and snares, must not be allowed by anyone, at any time or place, to hunt his prey.

(2) The fowler is not to be restrained on fallow-land or on the mountain side, but any passer-by should chase him off cultivated or holy ground.

(3) The fisherman is to be allowed to fish anywhere except in harbors and sacred rivers, ponds and lakes, provided only that he does not make the water turbid by using noxious juices.

So here's where we have to say that our regulations about education are finally complete.

CLINIAS: That's good news!

22. See 631b–d.

Book VIII

ATHENIAN: Now then, the next job is to enlist the aid of the oracles 828
reported from Delphi to draw up a program of festivals to be established by law, and discover what sacrifices the state will find it 'meet and right' to offer and which gods should receive them. It will probably be within our own discretion to decide the number and the occasions.

CLINIAS: Yes, I dare say the number will be up to us.

ATHENIAN: So let's deal with that first. There are to be no less than three b
hundred and sixty-five of them, so as to ensure that there is always at least one official sacrificing to some god or spirit on behalf of the state, its citizens and their property. The Expounders, Priests, Priestesses and Prophets are to hold a meeting with the Guardians of the Laws and fill in the details the legislator has inevitably omitted (in fact, this same combined board will also have to spot where such deficiencies exist in the first place). The law will provide for twelve festivals in honor of the twelve gods who c
give their names to the individual tribes. Every month the citizens should sacrifice to each of these gods and arrange chorus performances and cultural and gymnastic contests, varied according to the deity concerned and appropriate to the changing seasons of the year; and they must divide festivals for women into those that must be celebrated in the absence of men, and those that need not be. Further, they must not confuse the cult of the gods of the underworld with that of the 'heavenly' gods (as we must style them) and their retinue. They are to keep the two kinds of celebration separate, and put the former by law in the twelfth month, which is sacred to Pluto. Men of battle should feel no horror for such a d
god as this—on the contrary, they should honor him as a great friend of the human race. The union of body and soul, you see, can never be superior to their separation (and I mean that quite seriously).

There's a further point they will have to appreciate if they are going to allocate these events satisfactorily. Although on the score of leisure-time and abundance of all necessities our state has no rivals at the present day, it still has to live the *good* life, just like the individual person; and the first 829
requirement for a happy life is to do yourself no injury nor allow any to be done to you by others. Of course, the first half of the requirement presents no great problem; the difficulty lies in becoming strong enough to be immune to injury—and the one and only thing that brings such immunity is complete virtue. The same applies to a state: if it adopts the ways of virtue, it can live in peace; but if it is wicked, war and civil war will plague it. That's the situation in a nutshell, and it means that each and every citizen must undertake military training in peace-time, and not b
leave it till war breaks out. So a state that knows its business should reserve at least one day per month (and more than one, if the authorities think fit) for military maneuvers, to be held without regard for the weather, come rain come shine. Men, women and children should participate, and the authorities will decide from time to time whether to take them out on

maneuvers *en masse* or in sections. They must never fail to mount a program of wholesome recreation, accompanied by sacrifices; and the program ought to include 'war-games' which should simulate the conditions of
c actual fighting as realistically as possible. On each field-day they should distribute prizes and awards of merit, and compose speeches in commendation or reproof of each other according to the conduct of individuals not only in the contests but in daily life too: those who are deemed to have acquitted themselves particularly well should be honored, while the failures should be censured. But not everyone should produce such compositions. For a start, a composer must be at least fifty years old, and he must not be one of those people who for all their poetical and musical competence have not a single noble or outstanding achievement to their credit. The
d compositions that ought to be sung (even if in terms of art they leave something to be desired) are those of citizens who have achieved a high standard of conduct and whose personal merits have brought them distinction in the state. The official in charge of education, together with the other Guardians of the Laws, are to select them and grant them alone the privilege of giving their Muses free rein; other people are to be entirely forbidden. No one should dare to sing any unauthorized song, not even if it is sweeter
e than the hymns of Orpheus or of Thamyras.[1] Our citizens must confine themselves to such pieces as have been given the stamp of approval and consecrated to the gods, and to compositions which on the strength of their authors' reputation are judged to be suitable vehicles for commendation or censure. (I intend the same regulations to apply to men and women alike, both as regards military excursions and freedom to compose unsupervised.)

The legislator should think things over and employ this sort of analogy: 'Let's see, now, once I've organized the state as a whole, what sort of
830 citizen do I want to produce? *Athletes* are what I want—competitors against a million rivals in the most vital struggles of all. Right?' 'Very much so', one would reply, correctly. Well then, if we were training boxers or pancratiasts or competitors in some other similar contest should we go straight into the ring unprepared by a daily work-out against an opponent? If we were boxers, surely we'd have spent days on end *before* the contest in strenuous practice, learning how to fight, and trying out all those maneu-
b vers we intended to use when the time came to fight to win? We'd come as close as we could to the real conditions of the contest by putting on practice-gloves instead of thongs, so as to get as much practice as possible in delivering and dodging punches. And if we ran particularly short of sparring partners then we'd go to the trouble of hanging up a lifeless dummy to practice against; and we certainly wouldn't be put off by the idiots who might laugh at us. Come to that, if one day we ran out of sparring
c partners completely, living or otherwise, and had no one to practice with

1. Orpheus' singing was said to be able to charm animals and trees and even rocks. Thamyras was a bard who boasted that not even the Muses could rival his music.

at all, we'd go so far as to box against our own shadows—shadow-boxing with a vengeance! After all, how else can you describe a practice-session in which you just throw punches at the air?

CLINIAS: No, sir, there's no other term for it than the one you've just used.

ATHENIAN: Very well. So when the fighting force of our state comes to brace itself to face the most important contest of all—to fight for life and d
children and property and the entire state—is it really to be after less intensive training than combatants such as these have enjoyed? Is our citizens' legislator going to be so scared that their practice against each other may look silly to some people that he will neglect his duty? I mean his duty of instructing that maneuvers on a small scale, without arms, should be held every day, if possible (and for this purpose he should arrange teams to compete in every kind of gymnastic exercise), whereas the 'major' exercises, in which arms are carried, should be held not less than once per month. The citizens will compete with each other throughout the entire country, to see who is best at occupying positions and laying e
ambushes, and they must reproduce the conditions of every kind of battle (that will give them *real* practice, because they will be aiming at the closest possible approximation to the *real* targets).[2] And they should use missiles that are moderately dangerous: we don't want the competitions they hold against each other to be entirely unalarming, but to inspire them with fear and do something to reveal the brave man and the coward; and the legislator should confer honors or inflict disgrace as appropriate, so as to prepare 831
the whole state to be an efficient fighter in the real struggle that lasts a lifetime. In fact, if anyone is killed in such circumstances, the homicide should be regarded as involuntary, and the legislator should decree that the killer's hands are clean when once he has been purified according to law. After all, the lawgiver will reflect, even if a few people do die, others who are just as good will be produced to replace them, whereas if fear dies (so to speak), he'll not be able to find in all these activities a yardstick to separate the good performers from the bad—and that would be a bigger disaster for the state than the other. b

CLINIAS: Yes, sir, we'd agree that this is the sort of law that every state should pass and observe.

ATHENIAN: Now we all know, don't we, the reason why this kind of teamwork and competition is not to be found in any state at the present time, except on a very modest scale indeed? I suppose we'd say it was because the masses and their legislators suffer from ignorance?

CLINIAS: Maybe so.

ATHENIAN: Not a bit of it, my dear Clinias! We ought to say there are c
two causes, and pretty powerful ones at that.

CLINIAS: What are they?

2. The translation of this parenthesis is something of a paraphrase of some difficult and obscure Greek.

ATHENIAN: The first is a passion for wealth which makes men unwilling to devote a minute of their time to anything except their own personal property. This is what every single citizen concentrates on with all his heart and soul; his ruling passion is his daily profit and he's quite incapable of worrying about anything else. Everyone is out for himself, and is very
d quick off the mark indeed to learn any skill and apply himself to any technique that fills his pocket; anything that doesn't do that he treats with complete derision. So we can treat this as one reason why states are not prepared to undertake this[3] or any other praiseworthy activity in a serious spirit, whereas their insatiable desire for gold and silver makes them perfectly willing to slave away at any ways and means, fair or foul, that promise to make them rich. It doesn't matter whether something is sanctioned by heaven, or forbidden and absolutely disgusting—it's all the same to them, and causes not the slightest scruple, provided it enables them to make beasts of themselves by wallowing in all kinds of food and drink
e and indulging every kind of sexual pleasure.

CLINIAS: You're quite right.

ATHENIAN: So I've described one cause: let's treat this obsession as the first obstacle that prevents states from following an adequate course of training, either for military or for any other purposes: naturally decent folk are turned into traders or merchant-venturers or just plain servants,
832 and bold fellows are made into robbers and burglars, and become bellicose and overbearing. Quite often, though, they are not naturally corrupt: they're simply unlucky.

CLINIAS: How do you mean?

ATHENIAN: Well, if you have to live out your life with a continual hunger in your soul, aren't you 'unlucky' to a degree? What other term could I use?

CLINIAS: Very well, that's one reason. What's your second, sir?

ATHENIAN: Ah, yes, thank you for jogging my memory.

b CLINIAS:[4] According to you, one cause is the insatiable and lifelong acquisitive urge which obsesses us all and stops us undertaking military training in the proper way. All right—now tell us the second.

ATHENIAN: I dare say it looks as if I'm putting off getting round to it because I don't know what to say?

CLINIAS: No, but you do seem to be such a 'good hater' of this sort of character that you're berating it more than the subject in hand requires.

ATHENIAN: That's a very proper rebuke, gentlemen. So you're all ready for the next point, it seems.

CLINIAS: Just tell us, that's all!

c ATHENIAN: The cause I want to put forward are those 'non-constitutions' that I've often mentioned earlier in our conversation—democracy, oligarchy and tyranny. None of these is a genuine political system: the best

3. Military exercises.

4. This speech and Clinias' next one are attributed to Megillus in the Budé text.

name for them all would be 'party rule', because under none of them do willing rulers govern willing subjects: that is, the rulers are always willing enough, but they never hold power with the consent of the governed. They hold it by constant resort to a degree of force, and they are never prepared to allow any of their subjects to cultivate virtue or acquire wealth or strength or courage—and least of all will they tolerate a man who can fight. So much for the two main roots of pretty nearly all evil, and certainly the main roots of the evils we're discussing. However, the political system which we are now establishing by law has avoided both of them. Our d
state enjoys unparalleled leisure, the citizens live free of interference from each other, and I reckon these laws of ours are quite unlikely to turn them into money-grubbers. So it's a reasonable and natural supposition that a political system organized along these lines will be unique among contemporary constitutions in finding room for the military training-cum-sport that we've just described—and described in the detail it deserves, too.

CLINIAS: Splendid.

ATHENIAN: The next thing we have to bear in mind about any athletic contest is this: if it helps us to train for war we must go in for it and put e
up prizes for the winners, but leave it strictly alone if it does not. Isn't that right? It will be better to stipulate from the start the contests we want, and provide for them by law. First, I take it we should arrange races, and contests of speed in general?

CLINIAS: Yes, we should.

ATHENIAN: At any rate, what makes a man a fine soldier more than anything else is general agility, a ready use of his hands as well as his feet. If he's a good runner, he can make a capture or show a clean pair of 833
heels, and versatile hands will stand him in good stead in tangling with the enemy in close combat, where strength and force are essential.

CLINIAS: Certainly.

ATHENIAN: But if he hasn't any weapons, neither ability will help him as much as it might.

CLINIAS: Of course not.

ATHENIAN: So in our contests the first competitor our herald will summon will be (as now) the single-length runner, and he will come forward armed; we shan't put up any prizes for competitors who are *un*armed. So, as I say, the competitor who intends to run one length will come on first, carrying his arms; second will come the runner over two lengths, and third the middle-distance runner; the long-distance man will come on fourth. b
The fifth competitor we shall call the 'heavy-armed' runner, from his heavier equipment. We shall start by sending him in full armor over a distance of sixty lengths to some temple of Ares and back. His course will be over comparatively level ground, whereas the other runner,[5] an archer in full archer rig, will run a course of 100 lengths over hills and constantly

5. The runner in a sixth race? The passage is confusingly written. (A 'length' = a 'stade' = about 200 yards; 60 lengths = about 7 miles; 100 lengths = about 11½ miles.)

c changing terrain to a temple of Apollo and Artemis. While we're waiting for these runners to return, we'll hold the other contests and finally award the prizes to the winners of each event.

CLINIAS: Fine.

ATHENIAN: Let's arrange these contests in three groups, one for boys, one for youths, and one for men. When youths and boys compete as archers and heavy-armed runners, we shall make the course for youths two-thirds of the full distance and for the boys one-half. As for females, girls below
d the age of puberty must enter (naked) for the single-length, double-length, middle and long-distance races, their competition being confined to the stadium. Girls from thirteen till the marriage-age must enter till they are at least eighteen, but not beyond the age of twenty. (They, however, must put on some suitable clothing before presenting themselves as competitors in these races.)

So much for men's and women's races; now to deal with trials of strength. Instead of wrestling and other he-man contests that are the fashion nowa-
e days, we'll have our citizens fight each other *armed*—man to man, two a side, and any number per team up to ten. We ought to take our cue from the authorities in charge of wrestling, who have established criteria which will tell you whether a wrestler's performance is good or bad. We must call in the leading exponents of armed combat and ask them to assist us in framing rules about the blows one needs to avoid or inflict to win in
834 this sort of of contest, and similarly the points we need to look for to decide the loser. The same set of rules should also apply to the female competitors (who must be below the age of marriage). To replace the *pancration*[6] we shall establish a general contest of light-infantry; the weapons of the competitors are to be bows, light shields, javelins, and stones cast by hand and sling. Here too we'll lay down rules, and give the honor of victory to the competitor who reaches the highest standard as defined by the regulations.

The next thing for which we must provide rules is horse-racing. In Crete,
b of course, horses are of rather limited use and you don't find very many of them, so that the comparatively low level of interest in rearing and racing them is inevitable. No one in this country keeps a team of horses for a chariot, nor is ever likely to covet such a thing, so that if we established contests in something so foreign to the local customs, we'd be taken for
c idiots (and rightly). The way to modify this sport for the local Cretan terrain is to put up prizes for skill in *riding* the animals—as foals, when half-grown, and when fully grown. So our law should provide for contests in which jockeys can compete with each other in these categories; Tribe-Leaders and Cavalry-Commanders should be entrusted with the job of deciding the actual courses and deciding which competitor has won (in full armor, of course: just as in the athletic events, if we established contests for unarmed competitors we'd be failing in our duty as legislators). And

6. A form of wrestling-cum-boxing that permitted kicking and choking as well.

since your Cretan is no fool at archery and javelin-throwing in the saddle, d
people should amuse themselves by competing in this sort of contest too.
As for women, there's no point in making it legally compulsory for them
to join in all this, but if their previous training has got them into the habit,
and girls and young women are in good enough shape to take part without
hardship, then they should be permitted to do so and not discouraged.

That brings us to the end of our discussion of competitions and the
teaching of physical training, and we've seen what strenuous efforts are e
involved in the contests and the daily sessions with instructors. In fact,
we've also dealt pretty thoroughly with the role of the arts, although
arrangements about reciters of poetry and similar performers, and the
chorus-competitions obligatory at festivals, can wait till the gods and the
minor deities have had their days and months and years allocated to them;
then we can decide whether festivals should be held at two-year or four-
year intervals, or whether the gods suggest some other pattern. On these 835
occasions we must also expect the various categories of competitions in
the arts to be held. This is the province of the stewards of the games, the
Minister of Education and the Guardians of the Laws, who should all meet
as an ad hoc committee and produce their own regulations about the date
of each chorus-competition and dance, and specify who should compete
and who may watch. The original legislator has often enough explained
the sort of thing each of these performances should be, and has dealt with b
the songs, the spoken addresses and the musical styles that accompany
the rhythmical movements of the dancers. His successors must emulate
his example in their own legislation and match the right contests with the
right sacrifices at the right times, and so provide festivals at which the
state may make merry.

ATHENIAN: It's not difficult to see how to cast these and similar matters
in the form of a law, and making this or that alteration won't help or harm
the state very much. But now for something which is not a triviality at
all. It's a point on which it is difficult to convince people, and God himself
is really the only person to do it—supposing, that is, we could in fact c
somehow get explicit instructions from him. Since that's impossible, it
looks as if we need some intrepid mortal, who values frankness above all,
to specify the policy he believes best for the state and its citizens, give a
firm 'no' to our most compelling passions, and order his audience of
corrupted souls to observe standards of conduct in keeping with, and
implied by, the whole organization of the state. There will be no one to
back him up. He'll walk alone, with reason alone to guide him.

CLINIAS: What new topic is this, sir? We don't see what you're getting at. d

ATHENIAN: That's not surprising. Well, I'll try to put the point more
explicitly. When I came to discuss education, I envisaged young men and
women associating with each other on friendly terms. Naturally enough,
I began to feel some disquiet. I wondered how one would handle a state
like this, with everyone engaged on a life-long round of sacrifices and
festivals and chorus-performances, and the young men and women well- e

nourished and free of those demanding and degrading jobs that damp down lust so effectively. Reason, which is embodied in law as far as it can be, tells us to avoid indulging the passions that have ruined so many people. So how will the members of *our* state avoid them? (Actually, most
836 desires may well be kept in check by the regulations we have already framed. If so, we needn't be surprised. After all, the law against excessive wealth will do a great deal to encourage self-control, and the educational curriculum is full of sound rules designed for the same purpose. The officials too, who have been rigorously trained to watch this point closely, and to keep the young people themselves under constant surveillance, will do something to restrain ordinary passions, as far as any man can.) But
b there are *sexual* urges too—of boys and girls and heterosexual love among adults. What precautions should one take against passions which have had a such a powerful effect on public and private life? What's the remedy that will save us from the dangers of sex in each? It's a great problem, Clinias. We're faced with the fact that though in several other respects Crete in general and Sparta give us pretty solid help when we frame laws that flout common custom, in affairs of the heart (there's no one listening,
c so let's be frank) they are totally opposed to us. Suppose you follow nature's rule and establish the law that was in force before the time of Laius.[7] You'd argue that one may have sexual intercourse with a woman but not with men or boys. As evidence for your view, you'd point to the animal world, where (you'd argue) the males do not have sexual relations with each other, because such a thing is unnatural. But in Crete and Sparta your argument would not go down at all well, and you'd probably persuade nobody. However, another argument is that such practices are incompatible with what in our view should be the constant aim of the
d legislator—that is, we're always asking 'which of our regulations encourages virtue, and which does not?' Now then, suppose in the present case we agreed to pass a law that such practices are desirable, or not at all *un*desirable—what contribution would they make to virtue? Will the spirit of courage spring to life in the soul of the seduced person? Will the soul of the seducer learn habits of self-control? No one is going to be led astray by that sort of argument—quite the contrary. Everyone will censure the
e weakling who yields to temptation, and condemn his all-too-effeminate partner who plays the role of the woman. So who on earth will pass a law like that? Hardly anyone, at any rate if he knows what a genuine law really is. Well, how do we show the truth of this? If you want to get these
837 things straight, you have to analyze the nature of friendship and desire and 'love', as people call it. There are two separate categories, plus a third which is a combination of both. But one term covers all three, and that causes no end of muddle and confusion.

CLINIAS: How's that?

7. In myth, Laius (Oedipus' father) abducted his host Pelops' son, thus inaugurating homosexual attachments between men and teenage boys.

ATHENIAN: When two people are virtuous and alike, or when they are equals, we say that one is a 'friend' of the other; but we also speak of the poor man's 'friendship' for the man who has grown rich, even though they are poles apart. In either case, when the friendship is particularly ardent, we call it 'love'.

CLINIAS: Yes, we do. b

ATHENIAN: And a violent and stormy friendship it is, when a man is attracted to someone widely different to himself, and only seldom do we see it reciprocated. When men are alike, however, they show a calm and mutual affection that lasts a lifetime. But there is a third category, compounded of the other two. The first problem here is to discover what this third kind of lover is really after. There is the further difficulty that he himself is confused and torn between two opposing instincts: one tells him to enjoy his beloved, the other forbids him. The lover of the body, c hungry for his partner who is ripe to be enjoyed, like a luscious fruit, tells himself to have his fill, without showing any consideration for his beloved's character and disposition. But in another case physical desire will count for very little and the lover will be content to gaze upon his beloved without lusting for him—a mature and genuine desire of soul for soul. That body should sate itself with body he'll think outrageous; his reverence and respect for self-control, courage, high principles and good judgment will make him want to live a life of purity, chaste lover with chaste beloved. d This combination of the first two is the 'third' love we enumerated a moment ago.

So there's your list of the various forms love can take: should the law forbid them all, and keep them out of our community? Or isn't it obvious that in our state we'd want to see the virtuous kind spring up—the love that aims to make a young man perfect? It's the other two we'll forbid, if we can. Or what *is* our policy, Megillus, my friend?

MEGILLUS: Indeed, sir, I heartily endorse what you've said on the subject. e

ATHENIAN: So it looks as if I've won you over, my dear fellow, as I guessed I would, and there's no call for me to inquire what line the law of Sparta takes on this topic: it is enough to note your assent to my argument. Later on I'll come back to the subject and try to charm Clinias also into agreeing with me. Let's assume you've both conceded my point, and press on with our laws without delay.

MEGILLUS: Fair enough.

ATHENIAN: I want to put the law on this subject on a firm footing, and 838 at the moment I'm thinking of a method which is, in a sense, simplicity itself. But from another point of view, nothing could be harder.

MEGILLUS: What are you getting at?

ATHENIAN: We're aware, of course, that even nowadays most men, in spite of their general disregard for the law, are very effectively prevented from having relations with people they find attractive. And they don't refrain reluctantly, either—they're more than happy to.

MEGILLUS: What circumstances have you in mind?

ATHENIAN: When it's one's brother or sister whom one finds attractive.
b And the same law, unwritten though it is, is extremely effective in stopping a man sleeping—secretly or otherwise—with his son or daughter, or making any kind of amorous approach to them. Most people feel not the faintest desire for such intercourse.

MEGILLUS: That's perfectly true.

ATHENIAN: So the desire for this sort of pleasure is stifled by a few words?

MEGILLUS: What words do you mean?

ATHENIAN: The doctrine that 'these acts are absolutely unholy, an abomination in the sight of the gods, and that nothing is more revolting'. We
c refrain from them because we never hear them spoken of in any other way. From the day of our birth each of us encounters a complete unanimity of opinion wherever we go; we find it not only in comedies but often in the high seriousness of tragedy too, when we see a Thyestes on the stage, or an Oedipus or a Macareus, the clandestine lover of his sister.[8] We watch these characters dying promptly by their own hand as a penalty for their crimes.

d MEGILLUS: You're right in this, anyway, that when no one ventures to challenge the law, public opinion works wonders.

ATHENIAN: So we were justified in what we said just now. When the legislator wants to tame one of the desires that dominate mankind so cruelly, it's easy for him to see his method of attack. He must try to make everyone—slave and free, women and children, and the entire state without any exception—believe that this common opinion has the backing of reli-
e gion. He couldn't put his law on a securer foundation than that.

MEGILLUS: Very true. But how on earth it will ever be possible to produce such spontaneous unanimity—

ATHENIAN: I'm glad you've taken me up on the point. This is just what I was getting at when I said I knew of a way to put into effect this law of ours which permits the sexual act only for its natural purpose, procreation, and forbids not only homosexual relations, in which the human race is deliberately murdered, but also the sowing of seeds on rocks and stone,
839 where it will never take root and mature into a new individual; and we should also have to keep away from any female 'soil' in which we'd be sorry to have the seed develop. At present, however, the law is effective only against intercourse between parent and child, but if it can be put on a permanent footing and made to apply effectively, as it deserves to, in other cases as well, it'll do a power of good. The first point in its favor is that it is a *natural* law. But it also tends to check the raging fury of the sexual instinct that so often leads to adultery; it discourages excesses in
b food and drink, and inspires men with affection for their own wives. And there are a great many other advantages to be gained, if only one could get this law established.

8. Thyestes had intercourse with his own daughter; Oedipus married his own mother.

But suppose some impatient young man were standing here, bursting with seed, and heard us passing this law. He'd probably raise the echoes with his bellows of abuse, and say our rules were stupid and unrealistic. Now this is just the sort of protest I had in mind when I remarked that I knew of a very simple—and yet very difficult—way of putting this law c into effect permanently. It's easy to see that it *can* be done, and easy to see *how*: if the rule is given sufficient religious backing, it will get a grip on every soul and intimidate it into obeying the established laws. But in fact we've reached a point where people still think we'd fail, even granted those conditions. It's just the same with the supposed impossibility of the common meals: people see no prospect of a whole state keeping up the d practice permanently. The proven facts of the case in your countries do nothing to convince your compatriots that it would be natural to apply the practice to women. It was this flat disbelief that made me remark on the difficulty of turning either proposal into an established law.

MEGILLUS: You're absolutely right.

ATHENIAN: Even so, I could put up quite a convincing case for supposing that the difficulties are not beyond human powers, and can be overcome. Do you want me to try to explain?

CLINIAS: Of course.

ATHENIAN: When will a man find it easier to keep off sex, and do as he's e told in a decent and willing spirit? When he's not neglected his training and is in the pink of condition, or when he's in poor shape?

CLINIAS: He'll find it a great deal easier if he's in training.

ATHENIAN: Now of course we've all heard the story of how Iccus of 840 Tarentum set about winning contests at Olympia and elsewhere. He was so ambitious to win, they say, and his expertise was strengthened by a character of such determination and self-discipline, that he never had a woman or even a boy during the whole time he was under intensive training. In fact, we are told very much the same about Crison, Astylus, Diopompus, and a great many others. And yet, Clinias, their characters were far less well educated than the citizens you and I have to deal with, and physically they were much lustier. b

CLINIAS: Yes, you're right—our ancient sources are quite definite that these athletes did in fact do as you say.

ATHENIAN: Well then, they steeled themselves to keep off what most people regard as sheer bliss, simply in order to win wrestling matches and races and so forth. But there's a much nobler contest to be won than that, and I hope the young people of our state aren't going to lack the stamina for it. After all, right from their earliest years we're going to tell them stories and talk to them and sing them songs, so as to charm them, c we trust, into believing that this victory is the noblest of all.

CLINIAS: What victory?

ATHENIAN: The conquest of pleasure. If they win this battle, they'll have a happy life—but so much the worse for them if they lose. That apart, the

fear that the act is a ghastly sin will, in the end, enable them to tame the passions that their inferiors have tamed before them.

CLINIAS: Quite likely.

d ATHENIAN: So thanks to the general corruption, that's the predicament we've got into at this point in our consideration of the law about sex. My position, therefore, is that the law must go ahead and insist that our citizens' standards should not be lower than those of birds and many other wild animals which are born into large communities and live chaste and unmarried, without intercourse, until the time comes for them to breed. At e the appropriate age they pair off; the male picks a wife, and female chooses a husband, and forever afterwards they live in a pious and law-abiding way, firmly faithful to the promises they made when they first fell in love. Clearly our citizens ought to reach standards higher than the animals'. But if they are corrupted by seeing and hearing how most other Greeks and non-Greeks go in for 'free' love on a grand scale, they may prove unable to keep themselves in check. In that case, the law-guardians must turn themselves into law-makers and frame a second law for people to observe.

841 CLINIAS: So if they find it impossible to enforce the ideal law now proposed, what other law do you advise them to pass?

ATHENIAN: The second best, Clinias, obviously.

CLINIAS: Namely?

ATHENIAN: My point is that the appetite for pleasures, which is very strong and grows by being fed, can be *starved* (you remember) if the body is given plenty of hard work to distract it. We'd get much the same result if we were incapable of having sexual intercourse without feeling ashamed; our shame b would lead to infrequent indulgence, and infrequent indulgence would make the desire less compulsive. So in sexual matters our citizens ought to regard privacy—though not complete abstinence—as a decency demanded by usage and unwritten custom, and lack of privacy as disgusting. That will establish a second legal standard of decency and indecency—not the ideal standard, but the next to it. People whose characters have been corrupted (they form a single group we call the 'self-inferior') will be made prisoners c of three influences that will compel them not to break the law.

CLINIAS: What influences do you mean?

ATHENIAN: Respect for religion, the ambition to be honored, and a mature passion for spiritual rather than physical beauty. 'Pious wishes!' you'll say; 'what romance!' Perhaps so. But if such wishes were to come true, the world would benefit enormously.

However, God willing, perhaps we'll succeed in imposing one or other of d two standards of sexual conduct. (1) Ideally, no one will dare to have relations with any respectable citizen woman except his own wedded wife, or sow illegitimate and bastard seed in courtesans, or sterile seed in males in defiance of nature. (2) Alternatively, while suppressing sodomy entirely, we might insist that if a man does have intercourse with any woman (hired or procured in some other way) except the wife he wed in holy marriage with e the blessing of the gods, he must do so without any other man or woman

getting to know about it. If he fails to keep the affair secret, I think we'd be right to exclude him by law from the award of state honors, on the grounds that he's no better than an alien. This law, or 'pair' of laws, as perhaps we should say, should govern our conduct whenever the sexual urge and the passion of love impel us, wisely or unwisely, to have intercourse. 842

MEGILLUS: Speaking for myself, sir, I'd be very glad to adopt this law of yours. Clinias must tell us his view on the subject himself.

CLINIAS: I'll do that later, Megillus, when I think a suitable moment has arrived. For the nonce, let's not stop our friend from going on to the next stage of his legislation.

MEGILLUS: Fair enough.

ATHENIAN: Well then, this is the stage we've reached now. We can assume b
that communal meals have been established (a thing that would be a problem in other countries, we notice, but not in Crete, where no one would think of doing anything else). But how should they be organized? On the Cretan model, or the Spartan? Or is there some third type that would suit us better than either? I don't think this is a difficulty, and there's not much to be gained from settling the point. The arrangements we have made are quite satisfactory as they are.

The next question is the organization of a food-supply in keeping with c
our communal meals. In other states the sources of supply are many and varied—in fact, at least twice as many as in ours, because most Greeks draw on both the land and the sea for their food, whereas our citizens will use the land alone. For the legislator, this makes things simpler. It's not just that half the number of laws or even substantially fewer will do, d
but they'll be more suitable laws for gentlemen to observe. Our state's legislator, you see, need not bother his head very much about the merchant-shipping business, trading, retailing, inn-keeping, customs duties, mining, money-lending and compound interest. Waving aside most of these and a thousand other such details, he'll legislate for farmers, shepherds, bee-keepers, for the protectors of their stock and the supervisors of their equip- e
ment. His laws already cover such major topics as marriage and the birth and rearing of children, as well as their education and the appointment of the state's officials, so the next topic to which he must turn in his legislation is their food, and the workers who co-operate in the constant effort to produce it.

Let's first specify the 'agricultural' laws, as they're called. The first law—sanctioned by Zeus the Protector of Boundaries—shall run as follows:

No man shall disturb the boundary stones of his neighbor, whether fellow citizen or foreigner (that is, when a proprietor's land is on the boundary of the state), in the conviction that this would be 'moving the immovable'[9] in the crudest sense. Far better that a man should want to 843
try to move the biggest stone that does not mark a boundary, than a small

9. A proverbial expression of disapproval for fundamental social and political change. Cf. 684e.

one separating friend's land from foe's, and established by an oath sworn to the gods. Zeus the God of Kin is witness in the one case, Zeus the Protector of Foreigners in the other. Rouse him in either capacity, and the most terrible wars break out. If a man obeys the law he will escape its penalties, but if he holds it in contempt he is to be liable to two punishments,
b the first at the hands of the gods, the second under the law. No man, if he can help it, must move the boundary stones of his neighbor's land, but if anyone does move them, any man who wishes should report him to the farmers, who should take him to court.

26. If anyone is found guilty of such a charge,
he must be regarded as a man who has tried to reallocate land, whether clandestinely or by force; and the court must bear that in mind when assessing what penalty he should suffer or what fine he should pay.

Next we come to those numerous petty injuries done by neighbor to neighbor. The frequent repetition of such injuries makes feelings run high, so that relations between neighbors become intolerably embittered. That's
c why everyone should do everything he can to avoid offending his neighbor; above all, he must always go out of his way to avoid all acts of encroachment. Hurting a man is all too easy, and we all get the chance to do that; but it's not everyone who is in a position to do a good turn.

27. If a man oversteps his boundaries and encroaches on his neighbor's land,
he should pay for the damage, and also, by way of cure for such uncivilized
d and inconsiderate behavior, give the injured party a further sum of twice that amount.

In all these and similar cases the Country-Wardens should act as inspectors, judges and assessors (the entire divisional company in the graver cases, as indicated earlier,[10] and the Guards-in-Chief in the more trivial).

28. If a man lets his cattle graze on someone else's land,
these officials must inspect the damage, reach a decision, and assess the penalty.

e 29. If anyone takes over another man's bees, by making rattling noises to please and attract them, so that he gets them for himself,
he must pay for the injury he has done.

30. If anyone burns his own wood without taking sufficient precautions to protect his neighbor's,
he must be fined a sum decided by the officials.

10. See 761d–e.

31. If when planting trees a man fails to leave a suitable gap between them and his neighbor's land,
the same regulation is to apply.

These are points that many legislators have dealt with perfectly adequately, and we should make use of their work rather than demand that the grand architect of our state should legislate on a mass of trivial details that can be handled by any run-of-the-mill lawgiver. For instance, the 844
water supply for farmers is the subject of some splendid old-established laws—but there's no call to let them overflow into our discussion! It is fundamental that anyone who wants to conduct a supply of water to his own land may do so, provided his source is the public reservoirs and he does not intercept the surface springs of any private person. He may conduct the water by any route he likes, except through houses, temples and tombs, and he must do no damage beyond the actual construction of the conduit. But in some naturally dry districts the soil may fail to retain b
the moisture when it rains, so that drinking water is in short supply. In that case the owner must dig down to the clay, and if he fails to strike water at that depth he should take from his neighbors sufficient drinking water for each member of his household. If the neighbors too are short of water, he should share the available supply with them and fetch his ration daily, the amount to be fixed by the Country-Wardens. A man may injure c
the farmer or householder next door on higher ground by blocking the flow of rainwater; on the other hand he may discharge it so carelessly as to damage the man below. If the parties are not prepared to co-operate in this matter, anyone who wishes should report the matter to an official—a City-Warden in the city, and a Country-Warden in the country—and obtain a ruling as to what each side should do. Anyone refusing to abide by the ruling must take the consequences of being a grudging and ill- d
tempered fellow:

32. If found guilty,
he should pay twice the value of the damage to the injured party as a penalty for disobeying the officials.

Everyone should take his share of the fruit harvest on roughly the following principles. The goddess of the harvest has graciously bestowed two gifts upon us, (a) the fruit which pleases Dionysus so much, but which won't keep, and (b) the produce which nature has made fit to store. So our law about the harvest should run as follows.

33. Anyone who consumes any part of the coarse crop of grapes or figs, whether on his own land or another's, before the rising of Arcturus[11] e
ushers in the vintage,
must owe

11. The autumn equinox.

(a) fifty drachmas, to be presented to Dionysus, if he takes the fruit from his own trees,
(b) one hundred if from his neighbor's, and
(c) sixty-six and two-thirds drachmas if from anyone else's trees.

If a man wants to gather in the 'dessert' grapes or figs (as they are called nowadays), he may do so whenever and however he likes, provided they come from his own trees; but

34. (a) if he takes them from anyone else's trees, without permission,
he must be punished in accordance with the provisions of the law which
845 forbids the removal of any object except by the depositor.[12]
(b) If a slave fails to get the landowner's permission before touching any of this kind of fruit,
he must be whipped, the number of lashes to be the same as the number of grapes in the bunch or figs picked off the fig tree.

A resident alien may buy dessert fruit and gather it in as he wishes. If a foreigner on a visit from abroad feels inclined to eat some fruit as he travels along the road, he may, if he wishes, take some of the dessert crop gratis,
b for himself and one attendant, as part of our hospitality. But foreigners must be prevented by law from sharing with us the 'coarse' and similar fruits.

35. If a foreigner, master or slave, touches such fruit in ignorance of the law,
(a) *the slave* is to be punished with a whipping;
(b) *the free* man is to be dismissed with a warning and told to stick to the crop that is unsuitable to be kept in store in the form of raisins, wine, or dried figs.

There should be nothing to be ashamed of in helping oneself inconspicuously to apples and pears and pomegranates and so on, but

c 36. (a) if a man under thirty is caught at it,
he should be cuffed and driven off, provided he suffers no actual injury.

A citizen should have no legal redress for such an assault on his person. (A foreigner is to be entitled to a share of these fruits too, on the same terms as he may take some of the dessert grapes and figs.) If a man *above* thirty years of age touches some fruits, consuming them on the spot and taking none away with him, he shall share them all on the same terms as the foreigner, but

(b) if he disobeys the law,
d *he should* be liable to be disqualified from competing for awards of merit, if anyone draws the attention of the assessors to the facts when the awards are being decided.

12. This offense is thus brought under the umbrella of the general law mentioned in 842e–843b.

Water is the most nourishing food a garden can have, but it's easily fouled, whereas the soil, the sun and the winds, which co-operate with the water in fostering the growth of the plants that spring up out of the ground, are not readily interfered with by being doctored or channeled off or stolen. But in the nature of the case, water is exposed to all these hazards. That is why it needs the protection of a law, which should run as follows. e

If anyone deliberately spoils someone else's water supply, whether spring or reservoir, by poisons or excavations or theft, the injured party should take his case to the City-Wardens and submit his estimate of the damage in writing.

37. Anyone convicted of fouling water by magic poisons
should, in addition to his fine, purify the spring or reservoir, using whatever method of purification the regulations of the Expounders[13] prescribe as appropriate to the circumstances and the individuals involved.

A man may bring home any crop of his own by any route he pleases, 846
provided he does no one any damage, or, failing that, benefits to at least three times the value of the damage he does his neighbor. The authorities must act as inspectors in this business, as well as in all other cases when someone uses his own property deliberately to inflict violent or surreptitious damage on another man or some piece of his property without his permission. When the damage does not exceed three minas, the injured party must report it to the magistrates and obtain redress; but if he has a larger claim to bring against someone, he must get his redress from the culprit by taking the case to the public courts. b

38. If one of the officials is judged to have settled the penalties in a biased fashion,
he must be liable to the injured person for double the damages.

Offenses committed by the authorities in handling any claim should be taken to the public courts by anyone who may wish to do so. (There are thousands of procedural details like this that must be observed before a penalty can be imposed: the complaint has to be lodged, the summonses issued and served in the presence of two witnesses, or whatever the proper c
number is. All this sort of detail must not be left to look after itself, but it is not important enough for a legislator who is getting on in years. Our younger colleagues must settle these points, using the broad principles laid down by their predecessors as a guide for their own detailed regulations, which they must apply as need arises. They must thus proceed by trial and error until they think they have got a satisfactory set of formalities, and once the process of modification is over, they should finalize their rules of procedure and render them lifelong obedience.)

13. For these officials, see 759d–e.

d As for craftsmen in general, our policy should be this. First, no citizen of our land nor any of his servants should enter the ranks of the workers whose vocation lies in the arts and crafts. A citizen's vocation, which demands a great deal of practice and study, is to establish and maintain good order in the community, and this is not a job for part-timers. Following e two trades or two callings efficiently—or even following one and supervising a worker in another—is almost always too difficult for human nature. So in our state this must be a cardinal rule: no metal worker must turn to carpentry and no carpenter must supervise workers in metal instead of practicing his own craft. We may, of course, be met with the excuse that 847 supervising large numbers of employees is more sensible—because more profitable—than just following one's own trade. But no! In our state each individual must have one occupation only, and that's how he must earn his bread. The City-Wardens must have the job of enforcing this rule.

39. If a citizen born and bred turns his attention to some craft instead of to the cultivation of virtue,
the City-Wardens must punish him with marks of disgrace and dishonor until they've got him back on the right lines.

40. If a foreigner follows two trades,
the Wardens must punish him by prison or fines or expulsion from the b state, and so force him to play one role, not many.

As for craftsmen's pay, and cases of refusal to take delivery of their work, or any other wrong done to them by other parties or by them to others, the City-Wardens must adjudicate if the sum at issue does not exceed fifty drachmas; if more, the public courts must decide the dispute as the law directs.

In our state no duties will have to be paid by anyone on either imports or exports. No one must import frankincense and similar foreign fragrant c stuff used in religious ritual, or purple and similar dyes not native to the country, or materials for any other process which only needs imports from abroad for inessential purposes; nor, on the other hand, is anyone to export anything that it is essential to keep in the state. The twelve Guardians of the Laws next in order of seniority after the five eldest must act as inspectors and supervisors in this entire field. But what about arms and other military d equipment? Well, if we ever need, for military purposes, some technique, vegetable product, mineral, binding material or animal that has to be obtained from abroad, the *state* will receive the goods and pay for them, and the Cavalry-Commanders and the Generals are to be in charge of importing them and exporting other goods in exchange. The Guardians of the Laws will lay down suitable and adequate regulations on the subject. Nowhere in the whole country and whole state are these—or any other— e goods to be retailed for profit.

It looks as if the right way to organize the food supply and distribute agricultural produce will be to adopt something like the regulations in

force in Crete. Every citizen must divide each crop into twelve parts corresponding to the twelve periods in which it is consumed. Take wheat or barley, for instance (though the same procedure must be followed for all the other crops too, as well as for any livestock there may be for sale in 848
each district): each twelfth part should be split proportionately into three shares, one for the citizens, one for their slaves, and the third for workmen and foreigners in general (i.e., communities of resident aliens in need of the necessities of life, and occasional visitors on some public or private business). It should be necessary to sell only this third share of all the necessities of life; there should be *no* necessity to sell any part of the other b
two. So what will be the right way to arrange the division? It's obvious, for a start, that the shares we allocate will in one sense be equal, but in another sense unequal.

CLINIAS: What do you mean?

ATHENIAN: Well, the land will grow a good crop of one thing and a bad crop of another. That's inevitable, I take it.

CLINIAS: Of course.

ATHENIAN: None of the three shares—for masters, slaves and foreigners—must be better than the others: when the distribution is made, each group should be treated on an equal footing and get the same share. Each citizen must take his two shares and distribute them at his discretion to the slaves c
and free persons in his charge (quality and quantity being up to him). The surplus should be distributed by being divided up according to the number of animals that have to be supported by the produce of the soil, and rationed out accordingly.

Next, the population should have houses grouped in separate localities. This entails the following arrangements. There should be twelve villages, one in the middle of each of the twelve divisions of the state; in each d
village the settlers should first select a site for a market-place with its temples for gods and their retinue of spirits. (Local Magnesian gods, and sanctuaries of other ancient deities who are still remembered, must be honored as they were in earlier generations.) In each division they must establish shrines of Hestia, Zeus, Athena, and the patron deity of the district; after this their first job must be to build houses on the highest ground in a circle round these temples, so as to provide the garrison with e
the strongest possible position for defense.

Thirteen groups of craftsmen must be formed to provide for all the rest of the territory. One should be settled in the central city and the others distributed all round it on the outskirts in twelve further sub-groups corresponding to the twelve urban districts; and the categories of craftsmen useful to farmers must be established in each village. They must all be under the supervision of the chief Country-Wardens, who must decide the number and type required in each district and say where they should settle in order to prove their full worth to the farmers and cause them as little trouble as possible. Similarly the board of City-Wardens must assume 849
permanent responsibility for the craftsmen in the city.

The detailed supervision of the market must naturally be in the hands of the Market-Wardens. Their first job is to ensure that no one does any damage to the temples round the marketplace; secondly, to see whether people are conducting their business in an orderly or disorderly fashion, and inflict punishment on anyone who needs it. They must ensure that every commodity the citizens are required to sell to the aliens is sold in
b the manner prescribed by law. The law will be simply this. On the first day of the month the agents (the foreigners or slaves who act for the citizens) must produce the share that has to be sold to the aliens, beginning with the twelfth part of corn. At this first market an alien must buy corn and related commodities to last him the whole month. On the tenth day the respective parties must buy and sell a whole month's supply of liquids.
c The third[14] market should be on the twentieth, when they should hold a sale of the livestock that individuals find they need to buy or sell, and also of all the equipment or goods sold by the farmers, and which aliens cannot get except by purchase—skins, for example, and all clothing, woven material, felt, and all that sort of thing. But these goods (and barley and wheat ground into flour and every other kind of food) should never be
d bought by, or sold to, a citizen or his slave through *retail* channels. The proper place for 'retail' trading (as it's generally called) in corn and wine is the foreigners' market, where foreigners are to sell these goods to craftsmen and their slaves; and when the butchers have cut up the animals, it is to foreigners that they must dispose of the meat. Any foreigner who wishes may buy any kind of firewood wholesale any day from the district agents and sell it to other foreigners whenever he likes and in whatever
e quantity he pleases.

All other goods and equipment needed by various people should be brought to the general market and put up for sale in the place allotted them. (The Guardians of the Laws and the Market-Wardens, in conjunction with the City-Wardens, will have marked out suitable spaces and decided where each article is to be sold.) Here they must exchange money for goods and goods for money, and never hand over anything without getting something in return; anyone who doesn't bother about this and trusts the other party must grin and bear it whether or not he gets
850 what he's owed, because for such transactions there will be no legal remedy. If the amount or value of the object bought or sold is greater than is allowed by the law which forbids increase or diminution of a man's property above or below a given limit, the excess must immediately be registered with the Guardians of the Laws; but if there is a deficiency, it must be cancelled. The same rules are to apply to the registration of the property of resident aliens.

Anyone who wishes may come to live in the state on specified conditions. (a) There will be a community of foreigners open to anyone willing and
b able to join it. (b) The alien must have a skill and (c) not stay longer than

14. Reading *tritē* in b8.

twenty years from the date of registration. (d) He need pay no alien-tax, even a small one (apart from behaving himself), nor any tax on any purchase or sale. (e) When his time has expired, he is to collect his possessions and depart. (f) If during this period he has distinguished himself for some notable service to the state, and is confident he can persuade the council and the assembly to grant his request for an official extension of his stay, either temporarily or for life, he should present himself and make out his c
case; and he must be allowed to enjoy to the full whatever concessions the state grants him. (g) Children of resident aliens must be craftsmen, and (h) their period of residence must be deemed to have started when they reach the age of fifteen. On these conditions they may stay for twenty years, after which they must depart to whatever destination they like. If they wish to stay longer, they may do so provided they obtain permission as already specified. (i) Before a departing alien leaves he must cancel the entries that he originally made in the records kept in the custody of the officials.

Book IX

ATHENIAN: Next, in accordance with the natural arrangement of our legal 853
code, will come the legal proceedings that arise out of all the occupations we have mentioned up till now. To some extent, so far as agricultural affairs and related topics are concerned, we have already listed the acts that should be prosecuted, but the most serious have yet to be specified. Our next task is to enumerate these one by one, mentioning what penalty b
each should attract and to which court it should be assigned.

CLINIAS: That's right.

ATHENIAN: The very composition of all these laws we are on the point of framing is, in a way, a disgrace: after all, we're assuming we have a state which will be run along excellent lines and achieve every condition favorable to the practice of virtue. The mere idea that a state of this kind could give birth to a man affected by the worst forms of wickedness found in other countries, so that the legislator has to anticipate his appearance by threats—this, as I said, is in a way a disgrace. It means we have to lay c
down laws against these people, to deter them and punish them when they appear, on the assumption that they will certainly do so. However, unlike the ancient legislators, we are not framing laws for heroes and sons of gods. The lawgivers of that age, according to the story told nowadays, were descended from gods and legislated for men of similar stock. But we are human beings, legislating in the world today for the children of humankind, and we shall give no offense by our fear that one of our citizens will turn out to be, so to speak, a 'tough egg', whose character d
will be so 'hard-boiled' as to resist softening; powerful as our laws are, they may not be able to tame such people, just as heat has no effect on tough beans. For their dismal sake, the first law I shall produce will deal

with robbery from temples, in case anyone dares to commit this crime. Now in view of the correct education our citizens will have received, we should hardly want any of them to catch this disease, nor is there much reason to expect that they will. Their slaves, however, as well as foreigners and the slaves of foreigners, may well make frequent attempts at such
854 crimes. For their sake principally—but still with an eye on the general weakness of human nature—I'll spell out the law about robbery from temples, and about all the other similar crimes which are difficult or even impossible to cure.

Following the practice we agreed earlier, we must first compose preambles, in the briefest possible terms, to stand at the head of all these laws. Take a man who is incited by day and kept awake at night by an evil impulse which drives him to steal some holy object. You might talk to him and exhort him as follows:

b 'My dear fellow, this evil impulse that at present drives you to go robbing temples comes from a source that is neither human nor divine. It is a sort of frenzied goad, innate in mankind as a result of crimes of long ago that remained unexpiated; it travels around working doom and destruction, and you should make every effort to take precautions against it. Now, take note what these precautions are. When any of these thoughts enters your head, seek the rites that free a man from guilt; seek the shrines of the gods who avert evil, and supplicate them; seek the company of men
c who have a reputation in your community for being virtuous. Listen to them as they say that every man should honor what is fine and just—try to bring yourself to say it too. But run away from the company of the wicked, with never a backward glance. If by doing this you find that your disease abates somewhat, well and good; if not, then you should look upon death as the preferable alternative, and rid yourself of life.'

These are the overtures we make to those who think of committing all these impious deeds that bring about the ruin of the state. When a man obeys us, we should silently omit the actual law; but in cases of disobedience, we must change our tune after the overture and sing this resounding strain:

d 41. If a man is caught thieving from a temple and is (a) a foreigner or slave,
a brand of his misfortune shall be made on his face and hands, and he shall be whipped, the number of lashes to be decided by his judges. Then he shall be thrown out beyond the boundaries of the land, naked.

(Perhaps paying this penalty will teach him restraint and make him a better man: after all, no penalty imposed by law has an evil purpose, but
e generally achieves one of two effects: it makes the person who pays the penalty either more virtuous or less wicked.)

(b) If a citizen is ever shown to be responsible for such a crime—to have perpetrated, that is, some great and unspeakable offense against the

gods or his parents or the state,
the penalty is death.

The judge should consider him as already beyond cure; he should bear in mind the kind of education and upbringing the man has enjoyed from his earliest years, and how after all this he has still not abstained from acts of the greatest evil. But the very tiniest of evils will be what the offender suffers, indeed, he will be of service to others, by being a lesson to them 855
when he is ignominiously banished from sight beyond the borders of the state. And if the children and family escape taking on the character of the father, they should be held in honor and win golden opinions for the spirit and persistence with which they have shunned evil and embraced the good.

In a state where the size and number of the farms are to be kept permanently unaltered, it would not be appropriate for the state to confiscate the property of any of these criminals. But if a man commits a crime and is thought to deserve a penalty in money, then provided he possesses a surplus over and above the basic equipment of his farm, he must pay his b
fine. The Guardians of the Laws must scrutinize the registers and discover the precise facts in these cases, and make an exact report to the court on each occasion, so as to prevent any farm becoming unworked because of a shortage of money. If a man appears to deserve a stiffer fine, and if some of his friends are not prepared to bail him out by contributing the money to set him free, his punishment should take the form of a prolonged period of imprisonment (which should be open to public view), and various humiliations. But no one, no matter what his offense, is ever to be deprived c
of his citizen rights completely, not even if he has gone into exile beyond our frontiers for it. The penalties we impose will be death, imprisonment, whipping, or various degrading postures (either standing or sitting), or being rusticated and made to stand before temples on the boundaries of the state; and payments of money may be made in certain cases which we have just mentioned, where such a punishment is appropriate. In cases involving the death penalty the judges are to be the Guardians of the Laws, sitting in conjunction with the court whose members are selected by merit from the officials of the previous year. The method of bringing d
these cases to court, the serving of the summonses and similar procedural details must be the concern of the legislators who succeed us; what *we* have to do is legislate about the voting. The vote should be taken openly, but before this our judges should have ranged themselves according to seniority and sat down close together facing the prosecutor and defendant; all citizens who have some spare time should attend and listen carefully to such trials. First, the prosecutor should deliver a single speech, then the e
defendant; the most senior judge should follow these addresses by cross-questioning, and continue until he has gone into the arguments in sufficient detail. One by one, the other judges should follow the most senior and work through any points on which either litigant has left him dissatisfied by some kind of error or omission. A judge who feels no such dissatisfaction

should hand on the interrogation to his colleague. All the judges should
856 endorse those arguments that appear pertinent by appending their signatures and then depositing the documents on the altar of Hestia. The next day they must reconvene in the same place, and after similar interrogation and examination again append their signatures to the depositions. Having followed this procedure three times, after giving due consideration to the evidence and witnesses, each judge should cast a sacred vote, swearing in the name of Hestia to give, as far as lies in him, a judgment just and true. In this way they should conclude this category of trial.

b We come next, after these matters of religion, to cases of political subversion. We should treat as the biggest enemy of the entire state the man who makes the laws into slaves, and the state into the servant of a particular interest, by subjecting them to the diktat of mere men. This transgressor of the law uses violence in all that he does and stirs up sedition. Second in the scale of wickedness, in our estimation, should come the holder of some high state office, who while not an accessory to any such crimes, nevertheless fails to detect them and exact the vengeance of his fatherland
c (or, if he does detect them, holds back through cowardice). Every man who is any good at all must denounce the plotter to the authorities and take him to court on a charge of violently and illicitly overthrowing the constitution. The court should consist of the same judges as for robbers from temples, and the procedure of the entire trial should be the same as it was for them, a majority vote being sufficient for the death penalty.

As a rule, penalties and disgrace incurred by a father should not be
d passed on to any of his children, except where a man's father, grandfather and great-grandfather have all in turn been sentenced to death. The state should deport such cases to the state and city from which their family originally came; and they should take their property with them, apart from all the basic equipment of their farm. Next, sons of citizens who have more than one son over ten years of age should be nominated by their father or grandfather on either the mother's or the father's side. Ten of them should be chosen by lot, and the names of those whom the lot selects
e should be reported to Delphi. The god's choice should then be installed as heir to the abandoned property—and he, we hope, will have better luck.

CLINIAS: Splendid.

ATHENIAN: The same regulations about the judges that should try the case, and the procedure to be followed at the trial, will apply in yet a third instance, when a man is brought to court on a charge of treason. In the
857 same way, a single law should apply to all three cases and decide whether the children of these criminals (traitor, temple-robber, and the violent wrecker of the laws of the state) should remain in their fatherland or leave it.

Again, a single law and legal penalty should apply to every thief, no matter whether his theft is great or small:

> 42. (a) *he must* pay twice the value of the stolen article, if he loses the day and has sufficient surplus property over and above his farm with which to make the repayment.

(b) if he has not,
he must be kept in prison until he pays up or persuades the man who has had him convicted to let him off.

43. If a man is convicted of stealing from *public* sources, b
he shall be freed from prison when he has either persuaded the state to let him off or paid back twice the amount involved.

CLINIAS: How on earth can we be serious, sir, in saying that it makes no odds whether his theft is large or small, or whether it comes from sacred or secular sources? And what about all the other different circumstances of a theft? Shouldn't a legislator vary the penalties he inflicts, so that he can cope with the various *categories* of theft?

ATHENIAN: That's a good question, Clinias: I have been walking in my sleep, and you have bumped into me and woken me up. You have re- c
minded me of something that has occurred to me before, that the business of establishing a code of law has never been properly thought out—as we can see from the example that has just cropped up. Now, what am I getting at? It wasn't a bad parallel we made, you know, when we compared all those for whom legislation is produced today to slaves under treatment from slave doctors.[1] Make no mistake about what would happen, if one of those doctors who are innocent of theory and practice medicine by rule of thumb were ever to come across a gentleman doctor conversing with d
a gentleman patient. This doctor would be acting almost like a philosopher, engaging in a discussion that ranged over the source of the disease and pushed the inquiry back into the whole nature of the body. But our other doctor would immediately give a tremendous shout of laughter, and his observations would be precisely those that most 'doctors' are always so ready to trot out. 'You ass,' he would say, 'you are not treating the patient, but tutoring him. Anybody would think he wanted to become a doctor rather than get well again.' e

CLINIAS: And wouldn't he be right to say that?

ATHENIAN: Perhaps he would—if he were to bear in mind this further point, that anyone who handles law in the way we are now, *is* tutoring the citizens, not imposing laws on them. Wouldn't it be equally right to say that?

CLINIAS: Perhaps so.

ATHENIAN: However, at the moment, we are in a fortunate position.

CLINIAS: How do you mean?

ATHENIAN: I mean the lack of any necessity to legislate. We are simply 858
carrying out our own review of every kind of political system and trying to see how we could put into effect the absolutely ideal kind, as well as the least good sort that would still be acceptable. This is particularly true of our legislation, where it looks as if we have a choice: either we can examine ideal laws, if we want to, or again, if we feel like it, we can look

1. See 719e–720e.

at the minimum standard we are prepared to put up with. So we must choose which course we want to take.

CLINIAS: This is a ridiculous choice to give ourselves, my friend: it's not
b as if we were legislators forced by some irresistible necessity to legislate at a minute's notice, without being allowed to put the business off till tomorrow. We, God willing, can do as bricklayers do, or workmen starting some other kind of erecting. We can gather our materials in no particular order and then select—and select at leisure—the items which are appropriate for the forthcoming construction. Our assumption should be, therefore, that we are constructing something, but not under any constraint; we work at our convenience and spend part of the time preparing our material, part of the time fitting it together. So it would be quite fair to
c describe our penal code as already partially laid down, while other material for it lies ready to hand.

ATHENIAN: At any rate, Clinias, this will be the more realistic way to conduct our review of legislation. Well then, may we please notice this point that concerns legislators?

CLINIAS: What point?

ATHENIAN: I suppose literary compositions and written speeches by many other authors are current in our cities, besides those of the legislator?

CLINIAS: Of course they are.

ATHENIAN: To whose writings ought we to apply ourselves? Are we to
d read the poets and others who have recorded in prose or verse compositions their advice about how one should live one's life, to the neglect of the compositions of the legislators? Or isn't it precisely the latter that deserve our closest attention?

CLINIAS: Yes, it certainly is.

ATHENIAN: And I suppose the legislator, alone among writers, is to be denied permission to give advice about virtue and goodness and justice? Is he alone to be prevented from explaining their nature and how they should be reflected in our conduct, if we aim to be happy?

CLINIAS: No, of course not.

e ATHENIAN: Then is it really more scandalous in the case of Homer and Tyrtaeus and the other poets to have composed in writing[2] bad rules for the conduct of life, but less so for Lycurgus and Solon, and all others who have turned legislator and committed their recommendations to writing? The proper view, surely, is this: a city's writings on legal topics should turn out, on being opened, to be the finest and best of all those it has in
859 circulation; the writings of other men should either sound in harmony with them, or provoke ridicule by being out of tune. So what *is* the style in which a state's laws ought to be written, in our opinion? Should the regulations appear in the light of a loving and prudent father and mother? Or should they act the tyrant and the despot, posting their orders and

2. For Tyrtaeus, see 629a and note. Lycurgus was the traditional founder of the Spartan constitution. Solon legislated for Athens in 594 and wrote poems justifying his measures.

threats on walls and leaving it at that? Clearly, then, at this stage, we must decide whether we are going to try to talk about laws in the right spirit. Succeed or no, we shall at any rate show our good intentions. If we take b this course and have to face some difficulties *en route*, then let's face them. Good luck to us, and God willing, we shall succeed.

CLINIAS: You've put it splendidly. Let's do as you suggest.

ATHENIAN: In the first place, we must continue the attempt we've just made: we must scrutinize our law about robbers of temples, theft in general, and every variety of crime. We should not let it daunt us if in the full spate of our legislation we find that although we have settled some matters, c our inquiry into others has still to be completed. We are still aiming at the status of legislators, but we haven't achieved it yet; perhaps eventually we may succeed. So now let's look at these topics I've mentioned—if, that is, you are prepared to look at them in the way I have explained.

CLINIAS: Certainly we are prepared.

ATHENIAN: Now, on the whole subject of goodness and justice, we ought to try to see quite clearly just where we agree, and where there are differences of opinion between us. Again, how far do ordinary men agree? What differences are there between *them*? (Naturally, we should claim that we wanted there to be at least a small 'difference between' us and ordinary men!) d

CLINIAS: What sort of 'differences between us' have you in mind when you say that?

ATHENIAN: I'll try to explain. When we talk about justice in general—just men, just actions, just arrangements, we are, after a fashion, unanimous that all these things are 'good'. One might insist that even if just men happen to be shocking in their physical appearance, they are still preeminently 'good' because of their supremely just character. No one would think a man was talking nonsense in saying that. e

CLINIAS: Wouldn't that be right?

ATHENIAN: Perhaps. But if everything that has the quality of justice is 'good', we ought to note that we include in that 'everything' even the things done *to* us, which are about as frequent, roughly speaking, as the things *we* do to others.

CLINIAS: What now, then?

ATHENIAN: Any just action we do has the quality of being 'good' roughly in proportion to the degree to which it has the quality of justice.

CLINIAS: Indeed.

ATHENIAN: So surely, anything done *to* us, which has the quality of 860 justice, is to that extent agreed to be 'good'? This wouldn't involve our argument in any contradiction.

CLINIAS: True.

ATHENIAN: If we agree that something done to us is just, but at the same time shocking, the terms 'just' and 'good' will be in conflict with each other—the reason being that we have termed 'just' actions 'most shameful'.

CLINIAS: What are you getting at?

ATHENIAN: It's not difficult to understand. The injunctions of the laws we laid down a little while ago would seem to be in flat contradiction to what we are saying now.

CLINIAS: How so?

b ATHENIAN: Our ruling was, I think, that the temple-robber and the enemy of properly established laws would suffer a 'just' death. But then, on the brink of establishing a great many such rules, we held back. We saw ourselves becoming involved with penal suffering of infinite variety and on a grand scale. Of all sufferings, these were particularly just; but they were also the particularly shocking ones. Thus, surely, one minute we shall find 'just' and 'good' invariably turning out to be the same, and the next moment discover they are opposites.

CLINIAS: Likely enough.

c ATHENIAN: This is the source of the inconsistency in the language of the ordinary man: he destroys the unity of the terms 'good' and 'just'.

CLINIAS: That is indeed how it looks, sir.

ATHENIAN: Now, Clinias, we ought to examine our own position again. How far is it consistent in this business?

CLINIAS: Consistent? What consistency do you mean?

ATHENIAN: Earlier in our discussion I think I have said quite categorically—or if I haven't before, assume I'm saying it now—that . . .

CLINIAS: What?

d ATHENIAN: . . . all wicked men are, in all respects, *unwillingly* wicked. This being so, my next argument necessarily follows.

CLINIAS: What argument?

ATHENIAN: That the unjust man is doubtless wicked; but that the wicked man is in that state only against his will. However, to suppose that a voluntary act is performed involuntarily makes no sense. Therefore, in the eyes of someone who holds the view that injustice is involuntary, a man who acts unjustly would seem to be doing so against his will. Here and now, that is the position *I* have to accept: I allow that no one acts unjustly e except against his will. (If anyone with a disputatious disposition or a desire to attract favorable notice says that although there *are* those who are unjust against their will, even so many men do commit unjust acts voluntarily, I would reject his argument and stick to what I said.) Well then, how am I to make my own arguments consistent? Suppose the two of you, Clinias and Megillus, were to ask me, 'If that's so, sir, what advice have you for us about laying down laws for the city of the Magnesians? Do we legislate, or don't we?' 'Of course we legislate', I'd say, and you'd ask: 'Are you going to make a distinction for the Magnesians between voluntary and involuntary acts of injustice? Shall we impose stiffer penal-
861 ties on voluntary wrongdoing and acts of injustice, and smaller penalties on the involuntary? Or shall we treat them all on an equal footing, on the grounds that there simply is no such thing as an act of voluntary injustice?'

CLINIAS: You are perfectly right, sir. So what use shall we make of this position we have just taken up?

ATHENIAN: That's a good question. First of all, we shall make this use of it—

CLINIAS: What?

ATHENIAN: Let's cast our minds back. A few minutes ago we were quite right to say that in the matter of justice we were in a state of great muddle and inconsistency. With that in mind, we may go back to asking questions of ourselves. 'We have not yet found a way out of our confusion in these b
things. We have not defined the difference between these two categories of wrongs, voluntary and involuntary. In all states, every lawgiver who has ever appeared treats them as distinct, and the distinction is reflected in his laws. Now, is the position we took up a moment ago to overrule all dissent, like a decision handed down from God? Shall we make just this one assertion and dismiss the topic, without adducing any reasons to show that our position is correct?' Impossible. What we must do, before we legislate, is some- c
how make clear that there *are* two categories, but that the distinction between them is a different one. Then, when one imposes the penalty on either, everybody will be able to appreciate the arguments for it, and make some kind of judgment whether it is the appropriate penalty to have imposed or not.

CLINIAS: We think you state the position fairly, sir. We must do one of two things, either stop insisting that unjust acts are always involuntary, or, before going any further, demonstrate its validity by means of a preliminary distinction. d

ATHENIAN: The first of the two alternatives, denying the proposition when I believe it to represent the truth, is absolutely unacceptable to me. I should be breaking the laws of both God and man. But if the two things do not differ by virtue of being 'voluntary' and 'involuntary', how *do* they differ? What other factor is involved? That is what we have to try, somehow or other, to show.

CLINIAS: It is surely impossible, sir, to approach the problem in any other way.

ATHENIAN: So this is what we shall try to do. Look: when citizens come e
together and associate with each other, they obviously inflict many *injuries*; and to these the terms 'voluntary' and 'involuntary' can be freely applied.

CLINIAS: Of course.

ATHENIAN: But no one should describe all these injuries as acts of injustice, and conclude that therefore the unjust acts committed in these cases of injury fall into two categories, (a) involuntary (because if we add them all up, you see, the involuntary injuries are no less numerous and no less great than the voluntary ones), and (b) voluntary *as well*. Rather than do 862
that, consider the next step I am going to take in my argument: am I on to something or just driveling? My position, Clinias and Megillus, is not that, if someone hurts someone else involuntarily and without intending it, he is acting unjustly but involuntarily. I will not legislate so as to make this an involuntary act of injustice. Ignoring its relative seriousness or triviality, I shall refuse to put down such an injury under the heading of 'injustice' at all. Indeed, if my view is sustained, we shall often say of a

b benefactor that 'he is committing the injustice of conferring a benefit'—an *improper* benefit. You see, my friends, in effect we should not simply call it 'just' when one man bestows some object on another, nor simply 'unjust' when correspondingly he takes it from him. The description 'just' is applicable only to the benefit conferred or injury inflicted by someone with a just character and outlook. This is the point the lawgiver has to watch; he must keep his eyes on these two things, injustice and injury. He must use
c the law to exact damages for damage done, as far as he can; he must restore losses, and if anyone has knocked something down, put it back upright again; in place of anything killed or wounded, he must substitute something in a sound condition. And when atonement has been made by compensation, he must try by his laws to make the criminal and the victim, in each separate case of injury, friends instead of enemies.

CLINIAS: So far, so good.

ATHENIAN: Now to deal with unjust injuries (and gains too, as when one man's unjust act results in a gain for someone else). The cases that are curable we must cure, on the assumption that the soul has been infected by disease. We must, however, state what general policy we pursue in our cure for injustice.

CLINIAS: What is this policy?

d ATHENIAN: This: when anyone commits an act of injustice, serious or trivial, the law will combine instruction and constraint, so that in the future either the criminal will never again dare to commit such a crime voluntarily, or he will do it a very great deal less often; and in addition, he will pay compensation for the damage he has done. This is something we can achieve only by laws of the highest quality. We may take action, or simply talk to the criminal; we may grant him pleasures, or make him suffer; we may honor him, we may disgrace him; we can fine him, or give him gifts. We may use absolutely *any* means to make him hate injustice and embrace
e true justice—or at any rate not hate it. But suppose the lawgiver finds a man who's beyond cure—what legal penalty will he provide for this case? He will recognize that the best thing for all such people is to cease to live—best even for themselves. By passing on they will help others, too: first, they will constitute a warning against injustice, and secondly they
863 will leave the state free of scoundrels. That is why the lawgiver should prescribe the death penalty in such cases, by way of punishment for their crimes—but in no other case whatever.

CLINIAS: In one way, what you have said seems eminently reasonable. However, we should be glad to hear a clearer explanation of two points: first, the difference between injustice and injury, and secondly the various senses of 'voluntary' and 'involuntary' that you distinguished so elaborately in the course of your argument.

b ATHENIAN: I must try to meet your request and explain these points. Doubtless in the course of conversation you make at least this point to each other about the soul: one of the constituent elements (whether 'part' or 'state' is not important) to be found in it is 'anger', and this innate

impulse, unruly and difficult to fight as it is, causes a good deal of havoc by its irrational force.

CLINIAS: Yes, indeed.

ATHENIAN: The next point is the distinction we make between 'pleasure' and 'anger'. We say Pleasure wields her power on the basis of an opposite kind of force; she achieves whatever her will desires by persuasive deceit that is irresistibly compelling.[3]

CLINIAS: Quite right.

ATHENIAN: Thirdly, we would be saying nothing but the truth if we named ignorance as a cause of wrongdoing. The lawgiver would, in fact, do a better job if he divided ignorance into two: (1) 'simple' ignorance, which he would treat as the cause of trivial faults, (2) 'double' ignorance, which is the error of a man who is not only in the grip of ignorance but on top of that is convinced of his own wisdom, believing that he has a thorough knowledge of matters of which, in fact, his ignorance is total. When such ignorance is backed up by strength and power, the lawgiver will treat it as the source of serious and barbarous wrongdoing; but when it lacks power, he will treat the resultant faults as the peccadilloes of children and old men. He will of course regard these deeds as offenses, and will legislate against these people as offenders, but the laws will be of the most gentle character, full of understanding.

CLINIAS: Your proposals are perfectly reasonable.

ATHENIAN: Most of us agree that some people are 'conquerors of' their desire for pleasure and feelings of anger, while others are 'conquered' by them. And that is in fact the situation.

CLINIAS: It certainly is.

ATHENIAN: But we have never heard anyone say that some people are 'conquerors of' their ignorance, while others are 'conquered by' it.

CLINIAS: Very true.

ATHENIAN: But we do say that each of these influences often prompts every man to take the opposite course to the one which attracts him and which he *really* wishes to take.

CLINIAS: Yes, times without number.

ATHENIAN: May I now clearly distinguish for you, without elaboration, what in my view the terms 'just' and 'unjust' mean. My general description of injustice is this: the mastery of the soul by anger, fear, pleasure, pain, envy and desires, whether they lead to any actual damage or not. But no matter how states or individuals think they can achieve the good, it is a conception of what the good is that should govern every man and hold sway in his soul, even if he is a little mistaken. If it does, every action done in accordance with it, and any part of a man's nature that becomes subject to such control, we have to call 'just', and best for the entire life of mankind—and this in spite of the popular belief that damage done in such circumstances is an 'involuntary' injustice. However, we are not

3. Reading *biaiou* in b8.

engaging now in a captious dispute about terminology. But since it has
b become clear that there are three kinds of basic faults, we ought first to impress these upon our memory even more firmly. Our first kind is a painful one, and we call it anger and fear.

CLINIAS: Yes.

ATHENIAN: The second kind consists of pleasures and desires. The third, which is a distinct category, consists of hopes and opinion—a mere shot at the truth about the supreme good.[4] If we divide this last category twice,[5] we get three types; and that makes, according to our present argument, a total of five in all. We must enact different laws for the five kinds, and we must have two main categories.

c CLINIAS: And what are these?

ATHENIAN: The first category covers every occasion when crimes are committed openly with violence; secondly, we have crimes that take place under cover of darkness, involving secrecy and fraud. Sometimes we find a combination of both methods, in which case our laws will have to be very harsh indeed, if they are going to do their job.

CLINIAS: Of course.

d ATHENIAN: Now let's go back to the point where we started to digress, and carry on with our enactment of the legal code. Our regulations about those who pillage from the gods, and about traitors, had, I think, already been made; we had also dealt with those who do violence to the laws in order to subvert the existing constitution. A man who commits one of these crimes might be suffering from insanity, or be as good as insane either because of disease, or the effects of advanced senility, or because he is still in the years of childhood.

44. (a) If clear proof of any of these states is ever shown to the judges selected in each case, on the submission of either the criminal or his counsel, and in the opinion of the court the man was in that condition
e when he committed his crime,
he must pay, without fail, simple recompense for any damage he may have inflicted on anyone, but the other details of the penalty should be waived,
(b) if he has killed someone and his hands are polluted by murder,
he must depart to a place in another country and live there in exile for a year.

45. If he comes back before the legally appointed time, or even puts a foot into any part of his native country,

4. Reading . . . *kai doxēs, tou alēthous peri to ariston ephesis, triton* . . . in b7.

5. Assuming that the 'third' category here is equivalent to that of 'ignorance' as a cause of wrongdoing (863c–d), the reference here is to the 'simple' and 'double' forms of ignorance there noted, of which the latter was divided into that 'with power' and that 'without power'. That would yield 'three types', as the Athenian goes on to say here.

he must be imprisoned in the public jail by the Guardians of the Laws for two years, after which he shall be released.

The start we have made points the way forward: we need not scruple 865
to lay down a comprehensive set of laws that will cover every category of murder. First we should deal with those committed with the use of force, but unintentionally:

46 A. If anyone has unintentionally killed a man who is not an enemy
(a) in a contest or public games—whether death occurs immediately, or later as a result of the wounds,
(b) in war similarly,
(c) in military training, whether in javelin-exercises without the protection of armor, or when some weapons are being carried in imitation of b
wartime usage,
the offender shall be free of pollution when he has been purified in accordance with the relevant law from Delphi.
(d) All doctors, if their patient dies as an unintended result of their treatment,
are to be free of pollution according to law.
B. If one man kills another by his own act, but unintentionally,
(α) by his own hand,
(i) without weapons, or
(ii) by tool, weapon, administration of food or drink, application of fire or cold, or deprivation of air, whether
(β) (i) he does the deed himself, or c
(ii) through the agency of others,
in all cases it must be reckoned his own act and he must pay penalties as under:
If he kills
(a) a slave,
he must indemnify the dead man's master against the damage, reflecting what the loss would be if his own slave had been killed.
C. If he fails to indemnify the master,
he must pay a penalty of twice the value of the dead man, the judges making an estimate of it, and he must resort to greater and more numerous purifications than those who have killed in contests; and such expounders as are chosen by the oracle are to be in charge of these purifica- d
tions.
B. cont. (b) If he kills a slave of his own,
let him purify himself, and be quit of the murder according to law.
(c) If he kills a free man, inadvertently,
he must undergo the same purifications as the killer of a slave.

He should not take lightly an old story that comes from our collection of ancient tales. It runs as follows: Having lived in the full proud spirit of freedom, the man murdered by violence, freshly dead, turns his fury on

e the person responsible. The dead man is full of fear and loathing at his own violent sufferings; he abominates the sight of his own murderer going about localities once familiar to himself; to the full limit of his powers he visits his own anguish on the perpetrator of the crime, the man and his deeds; and his allies are the memories that haunt the murderer. Therefore

D. (a) *A killer* must keep clear of his victim for all the seasons of an entire year, by staying away from the dead man's usual haunts and the whole of his native country.
(b) If the deceased is a foreigner,
866 *the killer* should keep clear of the foreigner's homeland as well for an identical period.
If a man obeys this law without demur, the deceased's next of kin, who will take note of his compliance with these requirements, will grant him pardon and will be entirely correct to live on peaceable terms with him.
E. If the killer disobeys,
(a) by daring to enter temples and perform sacrifices, polluted as he is, and then
(b) by refusing to complete the above-mentioned period abroad,
b *the deceased's* next of kin must prosecute the killer on a charge of murder. In case of conviction, all penalties are to be doubled.
F. If the next of kin does not prosecute the crime,
the pollution must be deemed to have arrived at his own door, owing to the murdered man's supplications for atonement. Anyone who wishes may bring a charge against the next of kin and force him to keep away from his native country for five years, according to law.
G. (a) If a foreigner kills a foreigner who is living in the state,
c *anyone* who wishes should prosecute under the same laws.
(b) If the killer is
(i) a resident alien,
he must go abroad for a year;
(ii) a non-resident alien,
he must keep away, for the whole of his life, from the country that lays down these laws, in addition to performing the purifications; this is to apply whether he kills (1) a non-resident alien, (2) a resident alien, or (3) a citizen.
H. If he returns
(a) illegally,
the Guardians of the Laws must punish him by death, and if he has any property, they must present it to his victim's nearest relative;
(b) unintentionally,
d (i) being shipwrecked on the coast,
he must camp out where the sea washes by his feet and await an opportunity to sail away;
(ii) being forcibly brought in overland by someone,
the first official of the state that comes across him must set him free and dispatch him unharmed beyond the border.

If someone kills a free man by his own hand, but the deed is done in anger, we must first make an internal distinction within this type of crime. Anger is common to (1) those who kill a man by blows or similar means, owing to a sudden impulse: here the action is immediate, there is no e
previous intention to kill, and regret for the deed follows at once; (2) those who have been stung by insults or opprobrious actions and who pursue their vengeance until, some time later, they kill somebody: they *intend* to kill, and the deed causes no repentance. So it looks as if we have to establish two categories of murder; broadly speaking, both are done in anger, but 867
a proper description would be 'falling somewhere midway between "voluntary" and "involuntary" '; however, each type comes closer to one or other of these extremes. The man who nurses his anger and takes his vengeance later—not suddenly, on the spur of the moment, but with premeditation—approximates to the voluntary murderer. The man whose anger bursts forth uncontrollably, whose action is instant, immediate, and without premeditation, resembles the involuntary killer. Yet even so, he is not an entirely involuntary killer: he only resembles one. It is therefore sometimes difficult to categorize murders done under the influence of b
anger, and to know whether to treat them in law as voluntary or involuntary. The best course, which corresponds most closely to reality, is to classify them both under what they most resemble, and to distinguish them by the presence or absence of premeditation. We should lay down comparatively severe penalties for those who have killed in anger and with premeditation, and lighter ones for those who have killed on the spur of the moment without previous intent. Something which resembles a greater evil should attract a greater punishment, whereas a lesser penalty should be visited on that which resembles a lesser evil. This, then, is the c
course our laws should take.

CLINIAS: Indeed it is.

ATHENIAN: Then let's go back to our subject and carry on as follows:

47 A. If someone kills a free man with his own hand, and the deed is done in a fit of anger, without previous intent,
his penalty should in general be that appropriate to a man who has killed without anger; but in addition he should be obliged to go into exile for two years, by way of a curb for his anger.
B. If a man kills in anger, but with premeditation, d
his penalty should in general be that inflicted in the previous instance; but his exile should be for three years as against the other's two, the period of punishment being longer because of the greater violence of his passion.

In such cases, regulations for the return from exile should run as follows. (It is not easy to make hard and fast rules: sometimes the fiercer criminal as defined by the law may turn out easier to manage, whereas the man who is supposedly more manageable may turn out to be a more difficult case, having committed a murder with some savagery; the other,

e conversely, may have dispatched his victim without brutality. However, my account does describe the cases you'll find are typical.)

The Guardians of the Laws should act as assessors of all these points, and when the period of exile prescribed for either category has come to an end, they should send twelve of their number, as judges, to the borders of the country. During the time that has elapsed these twelve should have made a still more exact investigation into what the exiles did, so as to decide whether to grant pardon and permission to return; and the exiles are bound to acquiesce in the judgment of these authorities.

868 C. (a) If a returned exile of either category is ever again overcome by anger and commits the same offense,
he must go into exile and never come back.
(b) If he does come back,
his penalty will be the same as that imposed on the foreigner who returns [46H].
D (a) If a man kills his own slave,
he must purify himself.
(b) If he kills another's slave, in anger,
he must pay double damages to the owner.
E. If a killer in any category flouts the law and in his unpurified state pollutes the market-place, the sports stadium, and other holy places,
b *anyone who wishes* should prosecute both the killer and the relative of the dead man who allows the killer to do this, and compel the relative to exact payment of twice the fine and the other expenses; and the prosecutor shall be legally entitled to take for himself the money so paid.
F. (a) If a slave kills his own master, in anger,
the relatives of the deceased shall treat the killer in whatever way they
c like (except that under no circumstances whatever may they let him go on living), and be free of pollution.
(b) If a slave murders a free man who is not his master, in anger,
his master shall deliver him up to the relatives of the deceased, who will be obliged to kill him, the manner of the execution being within their discretion.
G. (This is a rare occurrence, but not unknown.)
(a) If a father or mother kills a son or daughter in anger by beating them or by using some other form of violence,
the murderers must undergo the same purifications as apply in the other
d cases, and go into exile for three years.
(b) When they come back, the female killer must be separated from her husband and the male from his wife, and they must have no more children; and they must never again share hearth and home with those whom they have robbed of a son or brother, or join in religious ceremonies with them.
H. If someone is impious enough to disobey these regulations,
he shall be liable to a charge of impiety at the hands of anyone who wishes.
e I. (a) If a man kills his wedded wife in a fit of anger, or a wife her husband,

they must undergo the same purifications and spend three years in exile.
(b) On his return, a person who has done such a deed must never join his children in religious ceremonies nor eat at the same table with them.
J. If the parent or the child disobeys,
he shall equally be liable to a charge of impiety at the hands of anyone who wishes.
K. If in anger
(a) a brother kills a brother or a sister, or
(b) a sister kills a brother or a sister,
the same purifications and periods of exile as applied to parents and children should be specified as applying in these cases too. (That is, they should never share hearth and home with the brothers whom they have deprived of their fellow brothers nor with parents whom they have deprived of children, nor join in religious ceremonies with them.)
L. If anyone disobeys this law,
he will be subject to the relevant law of impiety already laid down, as 869
is only right and proper.
M. If anyone gets into such an ungovernable temper with his parents and begetters that in his insane fury he dares to kill one of them, and
(a) is let off responsibility for murder by a voluntary statement of the deceased before death,
he must perform the same purifications as those who commit involuntary murder; and when he has followed the rest of the procedure prescribed for those cases, he may be considered purified.
(b) If he is not let off,

the perpetrator of such a crime will be indictable under many laws. He b
will be subject to the most huge penalties for assault, and likewise for impiety and temple-robbery—he has plundered the shrine that is his parent's body, and deprived it of life. Consequently if one man could die many times, the murderer of his father or mother who has acted in anger would deserve to die the death over and over again. To this one killer no law will allow the plea of self-defense; no law will permit him to kill his c
father or mother, who brought him into the world. The law will instruct him to put up with all manner of suffering before he does such a thing. But what other penalty than death could the law appropriately lay down for this criminal? The law, then, should run:

(b) cont.
the penalty for the murderer of a father or mother is to be death.
N. (a) If a brother kills his own brother in a political brawl or some similar circumstances, in self-defense when his victim had struck first,
he should be regarded as free of pollution (as though he had killed d
an enemy).
(b) The same applies if
(i) a citizen kills a citizen, or
(ii) a foreigner kills a foreigner.

(c) If in self-defense
(i) a citizen kills a foreigner, or
(ii) a foreigner kills a citizen,
the culprit should be in the same position with regard to the freedom from pollution, and likewise if
(iii) a slave kills a slave.
O. If however a slave, in self-defense, kills a free man,
he should be subject to the same laws as the parricide [47M].
P. The regulations stated about the acquittal from responsibility for
e murder granted by a father are to apply to every acquittal in such cases (when, that is, one man voluntarily absolves another of responsibility, on the grounds that the murder has been committed involuntarily):
the criminal must undergo the purifications and spend one year away from the country according to law.

Let this more or less suffice as a description of involuntary murders, which involve violence and anger. Our next task is to speak of voluntary murders, which are premeditated and spring from sheer injustice—the lack of control over the desire for pleasure and over one's lusts and jealous feelings.

CLINIAS: True.

ATHENIAN: First of all, we ought again to make as complete a list as possible of these sources of crime.

870 The chief cause is lust, which tyrannizes a soul that has gone wild with desire. This lust is most usually for money, the object of most men's strongest and most frequent longing. Because of the innate depravity of men and their misdirected education, money has the power to produce in them a million cravings that are impossible to satisfy—all centering on the endless acquisition of wealth. The cause of this incorrect education is the pernicious praise given to wealth by the public opinion of Greeks and
b non-Greeks alike. In fact, wealth takes only third place in the scale of goodness;[6] but they make it preeminent, to the ruination of posterity and themselves. The best and the noblest policy for all cities to follow is to tell the truth about wealth, namely that it exists to serve the body, just as the body should be the servant of the soul. Although the ends which wealth naturally serves are indeed 'good', wealth itself will take third place, coming after the perfection of the soul and the body. Taking, therefore, this argument as our guide, we shall find that the man who means to be
c happy should not seek simply to be wealthy, but to be wealthy in a way consistent with justice and self-control. Murders needing still more murders in expiation would not occur in cities that had taken this lesson to heart. But as things are, as we said when we embarked on this topic, we have here one cause, and an extremely prominent cause at that, of the most serious charges of deliberate murder.

6. See the lists at 697b ff. and 743e.

Second, an ambitious cast of mind: this breeds feelings of jealousy, which are dangerous companions to live with, particularly for the person who actually feels jealous, but potentially harmful to the leading citizens of the state as well.

In the third place, many a murder has been prompted by the cowardly d
fears of a guilty man. When a man is committing some crime, or has already committed it, he wants no one to know about it, and if he cannot eliminate a possible informer in any other way, he murders him.

These remarks should constitute the preface applying to all these crimes. In addition, we must tell the story which is so strongly believed by so many people when they hear it from those who have made a serious study of such matters in their mystic ceremonies. It is this:

Vengeance is exacted for these crimes in the after-life, and when a man returns to this world again he is ineluctably obliged to pay the penalty e
prescribed by the law of nature—to undergo the same treatment as he himself meted out to his victim, and to conclude his earthly existence by encountering a similar fate at the hands of someone else.

If a man obeys and heartily dreads such a penalty after merely hearing the overture, there is no need to play over the relevant law. But in case 871
of disobedience the following law should be stated in writing:

> 48 A. (a) If a man by his own hand viciously kills a fellow citizen, with premeditation,
> *he must* be excluded from the places where people usually gather, and not pollute temples or market or harbors or any other common place of assembly, *whether or not* someone makes a proclamation against the culprit in these terms. (The reason is that the law itself makes the proclamation. It makes a permanent and public proclamation on behalf of the whole state, and always will.)
> B. If a man fails in his duty to prosecute the culprit or bar him by b
> proclamation, and is a relative (no more distant than a cousin) of the deceased on either the father's side or the mother's,
> *the pollution*, together with the enmity of the gods, should arrive at his own door. (The curse imposed by the law turns the edict of heaven against him.) He must be subject to prosecution at the hands of any man who wishes to take vengeance for the deceased, and the man who thus wishes to take vengeance must scrupulously perform all the appropriate ablutions and all the other ritual details the god prescribes c
> for such cases; and when he has published the proclamation, he must go and make the criminal submit to the imposition of the penalty, under the law.

It is easy for a legislator to demonstrate that all this should be accompanied by a number of prayers and sacrifices to those gods who make it their business to prevent murders occurring in society. The Guardians of the Laws, in association with expounders, soothsayers, and the god, should d
rule who these gods are to be, and specify the procedure for bringing such

cases that would be most in harmony with the requirements of religion; they should then follow it themselves in bringing these cases to court, which should be the same as the one given final authority over temple-robbers.[7]

48 A. cont.
(b) If a man is found guilty,
he must be punished by death and be deprived of burial in the country of his victim. (In this way we can show he has not been forgiven, and avoid impiety.)
C. (a) If the defendant makes off and refuses to submit to trial,
he must remain in exile permanently.
(b) If such a person sets foot within the country of the murdered man,[8]
e *the first* of the relatives of the deceased who comes across him, or indeed any citizen, should either
(i) kill him with impunity, or
(ii) tie him up, and hand him over to the judges who tried the case for them to carry out the execution.
D. When a man undertakes a prosecution, he should immediately demand sureties from the accused. The latter must duly provide his sureties, who must be deemed, in the eyes of the judges who constitute the court in these cases, to be credit-worthy; and these three credit-worthy sureties must pledge themselves to produce the accused at his trial. If a man refuses, or is unable, to produce sureties,
the authorities must arrest him and keep him bound and under guard, so that they can produce him at the hearing of the case.
872 E. If a man does not actually kill with his own hands, but simply plans the murder, and although responsible for it by virtue of plotting arrangements, continues to live in the state with his soul polluted by homicide, his trial for this crime should proceed along the same lines as before, except as regards the bail. If he is convicted,
he may be granted burial in his native land, but the other details of the punishment should conform with the regulations previously laid down for this category.[9]
F. These same regulations about the actual commission and mere plotting of a murder should apply when
(a) (i) foreigners prosecute foreigners,
(ii) citizens prosecute foreigners and foreigners citizens, and
b (iii) slaves prosecute slaves.
(b) But an exception should be made in the business of the surety. Just as it was said [48D.] that *actual* murderers should provide sureties, the person who proclaims the ban arising from the murder should simultaneously demand sureties in these cases too [48F(a)(i-iii)].

7. 855c–856a.
8. Reading *toutōn* in d7.
9. That is, for those who *do* kill with their own hand.

G. If a slave intentionally kills a free man, whether he did the deed himself or planned it, and is convicted,
the public executioner should haul him off in the direction of the deceased's grave to a point from which the culprit can see the tomb. He should then scourge him, giving as many strokes as the successful prosecutor instructs. If the homicide survives the scourging, he is to be executed. c
H. If a man kills an innocent slave, fearing that he will inform against his own shocking and disgraceful conduct, or prompted by some similar motive,
he should submit to trial, when a slave has died in these circumstances, precisely as he would have submitted to trial for murder if he had killed a citizen.

Certain crimes, which may occur, make the mere composition of laws for them an unpleasant and distasteful business, but it is impossible to d omit them from our code. I mean deliberate and wholly wicked murders of relatives, whether the murderer commits the crime in person or merely plots it. Generally speaking, these killings occur in states that are badly administered or have a defective system of education, but occasionally one of them might crop up even in a country where one would hardly look for it. What we have to do is to repeat our explanation of a moment ago, hoping that anyone who hears it will be more willing and able to avoid committing murders that are absolutely the most detestable in the sight of Heaven. The 'myth', or 'explanation', or whatever the right word is, has come down to us in unambiguous terms from the lips of priests of long ago. e

Justice stands on guard to exact vengeance for the spilling of the blood of relatives; she operates through the law we have just mentioned, and her decree is that a man who has done something of this kind is obliged to suffer precisely what he has inflicted. If ever a man has murdered his father, in the course of time he must suffer the same fate from violent treatment at the hands of his children. A matricide, before being reborn, must adopt the female sex, and after being born a woman and bearing children, be dispatched subsequently by them. No other purification is available when common blood has been polluted; the pollution resists 873 cleansing until, murder for murder, the guilty soul has paid the penalty and by this appeasement has soothed the anger of the deceased's entire line.

Thus the fear of such vengeance, exacted by the gods, should hold a man in check. But this is the law the human legislator will lay down in case some people should be overwhelmed by the terrible misfortune of committing such a crime:

I. (a) If they should dare to tear the soul from the body of their father, mother, brothers or children, deliberately and with premeditation,
the proclamations of banishment from places of public resort, and the sureties, should be identical to those detailed in previous cases. b

(b) If a man is convicted of such a murder, having killed one of the aforementioned persons,
the court-assistants and the officials shall execute him, and throw him out, naked, at a specified place where three roads meet outside the city. All the officials, on behalf of the entire state, must take a stone and throw it at the head of the corpse, and thus purify the entire state. After this, they must carry the corpse to the borders of the land and eject it,
c giving it no burial, as the law instructs.

But what about the killer of the person who is, above all, his 'nearest and dearest', as the expression is? What penalty ought he to undergo? I am talking about the man who kills *himself*, who (1) uses violence to take his fate out of the hands of destiny, (2) is not acting in obedience to any legal decision of his state, (3) whose hand is not forced by the pressure of some excruciating and unavoidable misfortune, (4) has not fallen into some irremediable disgrace that he cannot live with, and (5) imposes this unjust
d judgment on himself in a spirit of slothful and abject cowardice. In general, what ritual observances should take place with regard to purification and interment in this case, are matters known to God; the relatives must seek guidance from expounders and the relevant laws, and act in these instances according to their instructions. But

49. (a) People who perish in this way must be buried individually, with no one to share their grave.
(b) They must be buried in disgrace on the boundaries of the twelve territorial divisions, in deserted places that have no name.
(c) The graves must not be identifiable, either by headstone or title.

e 50. (a) If a beast of burden or any other animal kills anyone (except when the incident occurs while they are competing in one of the public contests),
(i) *the relatives* must prosecute the killer for murder;
(ii) *the next of kin* must appoint some Country-Wardens (whichever ones he pleases, and as many as he likes), and they must try the case:
(iii) if the animal is found guilty,
they must kill it and throw it out beyond the frontiers of the country.
(b) If some inanimate object causes loss of human life (but not if it is a stroke of lightning or some similar weapon wielded by God—it must be one of the other things that kill a man by falling on him, or because he falls on it),
874 (i) *the next of kin* must appoint the nearest neighbor to sit in judgment on the object, and thus effect the purification of himself and the deceased's entire line;
(ii) *the condemned* object must be thrown over the frontiers, in the way specified in the case of animals.

51. If someone is found dead, and the killer is not known and cannot be discovered by diligent efforts to trace him,

the proclamations should be the same as laid down in former cases, being made, however, against 'the murderer': when the prosecutor has established his case, he must give notice in the market-place to the killer and convicted murderer of so-and-so, that he must not enter holy places nor b
any part of the country of the deceased; he must threaten that if he does turn up and is recognized, he will be executed, denied burial, and his body ejected from the country of his victim.

So much, then, for the law on that sort of murder. In the following conditions, however, it will be right to regard the killer as innocent:

52. (a) If he catches a thief entering his home at night to steal his goods, and kills him,
he shall be innocent.
(b) If he kills a footpad in self-defense, c
he shall be innocent.
(c) If anyone sexually violates a free woman or boy,
he may be killed with impunity by the victim of the violence, or by the victim's father or brothers or sons.
(d) If a husband discovers his wedded wife being raped and kills the attacker,
the law will regard him as innocent.
(e) If a man kills someone while saving the life of his father (provided the latter is not committing a crime), or while rescuing his mother or children or brothers, or the mother of his children,
he shall be completely innocent. d

ATHENIAN: Let us assume we have completed our legislation concerning the training and education that the soul needs during a man's life (a life that is worth the living if these needs are met, but not if they are not), and the penalties that should apply in cases of death by violence. We have discussed, too, the training and education of the body, and the related topic in this case is the violent treatment, voluntary or involuntary, of one man by another. So far as we can, we must distinguish the various categories, see how many there are, and say what penalties will be appropriate for each. It looks as if this could properly form the next subject of our legis- e
lation.

Even the biggest bungler you could find among would-be legislators will put cases of wounding and mutilation immediately after cases of murder. Woundings ought to be distinguished as murders were: some are inflicted involuntarily, some in anger, some through fear, while others are committed voluntarily and with premeditation. A preliminary address must be given about all these categories as follows:

It is vital that men should lay down laws for themselves and live in obedience to them; otherwise they will be indistinguishable from wild 875
animals of the utmost savagery. The reason is this: no man has sufficient natural gifts *both* to discern what benefits men in their social relationships

and to be constantly ready and able to put his knowledge to the best practical use. The first difficulty is to realize that the proper object of true political skill is not the interest of private individuals but the common good. This is what knits a state together, whereas private interests make
b it disintegrate. If the public interest is well served, rather than the private, then the individual and the community alike are benefited.

The second difficulty is that even if a man did get an adequate theoretical grasp of the truth of all this, he might then attain a position of absolute control over a state, with no one to call him to account. In these circumstances he would never have the courage of his convictions; he would never devote his life to promoting the welfare of the community as his first concern, making his private interests take second place to the public good. His human nature will always drive him to look to his own advantage and the lining of his own pocket. An irrational avoidance of pain and
c pursuit of pleasure will dominate his character, so that he will prefer these two aims to better and more righteous paths. Blindness, self-imposed, will ultimately lead the man's whole being, and the entire state, into a morass of evil. But if ever by the grace of God some natural genius were born, and had the chance to assume such power, he would have no need of laws to control him. Knowledge is unsurpassed by any law or regulation;
d reason, if it is genuine and really enjoys its natural freedom, should have universal power: it is not right that it should be under the control of anything else, as though it were some sort of slave. But as it is, such a character is nowhere to be found, except a hint of it here and there. That is why we need to choose the second alternative, law and regulation, which embody general principles, but cannot provide for every individual case.

I have pointed this out because we are now going to settle the penalty or fine to be imposed on someone who has wounded or harmed someone else. Anyone could quite easily and properly take us up on any point and
e ask: 'What attacker, what wound, what victim do you mean? How was the attack made, and when? The circumstances of these cases differ in a thousand and one different ways.' Now to leave all these details to the judgment of the courts is impracticable, and equally impracticable to leave them none. In every case, however, one point in particular simply must be left to the courts: in each separate instance, they must decide whether the crime did in fact take place, or not. But on the other hand it is hardly
876 feasible to produce laws oneself to cover every case, serious or trivial; one can scarcely leave the courts no discretion at all about the fine or punishment that ought to be imposed on a criminal of this kind.

CLINIAS: Well, then, where do we go from here?

ATHENIAN: We conclude that some details ought to be left to the courts, but not others; these should be regulated by the legislator.

CLINIAS: Which points, then, ought to be in the legal code, and which ought to be referred to the judgment of the courts?

ATHENIAN: In this connection, here's the next thing to notice: sometimes
b we find in a state that the juries are useless, dumb things; the individual

jurymen keep their opinions a mystery known only to themselves and give their decisions by secret ballot. It's even more serious when so far from keeping silent when they hear a case they make a tremendous disturbance as though they were in a theatre, and hurl shouts of applause or disapproval at the speaker on either side in turn. All this puts the state at large into an awkward predicament. It is a wretched business to be forced to lay down laws for courts of that type, but if one is forced, the right thing to do is to hand over to them the assessment of penalties only in very trivial cases, providing for the majority in explicit laws of one's own— c
if, that is, one ever does legislate for a state organized in this way. But in a country where the regulation of the courts is as satisfactory as can be achieved and the jurymen-to-be have received a good education and been examined by all kinds of tests, it is right and proper to grant them complete discretion on all points to do with the punishments or fines that convicted criminals should suffer. In the present case we cannot be blamed if we leave to their discretion the most frequent and important points that arise, d
because they are points which even inadequately educated jurymen could grasp and apply when they have to give each individual crime a penalty appropriate both to the damage done and to the wickedness which is at the root of the actual deed. We believe, in fact, that the people for whom we are legislating may well turn out quite conspicuously able judges of these matters, so we should leave most decisions to them. Even so, in enacting earlier parts of our legal code, we mentioned the practice of e
sketching some examples of penalties—models for the judges to imitate, to stop them exceeding the due limits of justice. We suited the action to the word; it was the right course then and it is the right course now, as I once again resume our legislation.

Our law on wounding, then, should be written in the following terms:

> 53 A. If a man deliberately intends to kill a fellow citizen (unless the latter is one of those whose death is sanctioned by the law [52(a-e)]), and wounds him without being able to kill him, no pity should be wasted on the man who has inflicted a wound with that sort of intention: 877
> he should be treated with no more respect than a killer, and made to stand trial for murder.

But we should have due respect for the luck that has saved him from total ruin, and for his guardian angel too, who in pity for the attacker and the wounded man has stopped the injury of the latter from proving fatal, and prevented the disastrous ill luck of the former from bringing a curse down upon his head. We should duly thank his guardian spirit and not obstruct its wishes:

> 53 A. cont.
> *He who* has inflicted the wound shall be spared the death penalty, but b
> he must suffer life-long banishment to some neighboring state, with full freedom to enjoy all the income from his property; he must pay full

compensation for whatever injury he has done the wounded man, the sum to be assessed by the court that tries the case. (The court will consist of the same people who would have tried him for murder if his victim had died of the wounds sustained.)
B. If with similar premeditation
(a) a child wounds his parents, or
(b) a slave wounds his master,
death is to be the penalty.
C. If similarly
(a) a brother wounds a brother or a sister, or
(b) a sister wounds a brother or a sister,
c and is convicted of wounding with premeditation,
death is to be the penalty.
D If with intent to kill
(a) a wife wounds her husband, or
(b) a husband wounds his wife,
he or she must go into permanent exile. If they have sons or daughters who are still in their minority, the trustees must administer their property in trust, and care for the children as though they were orphans. If the offspring are adult, they should themselves take possession of the property, and be under no obligation to support the exile.[10] If anyone
d who succumbs to such misfortune is childless, the relatives of the exile, as far as the children of the cousins on both the male and female side, must hold a meeting, and in consultation with the Guardians of the Laws appoint an heir for this property, the 5040th in the state.

(They should look at the matter in the following light: none of the 5040 farms belongs to its occupant or his family in general as much as to the state, which is entitled to it not only as a piece of public property but also
e as its own private possession; and the state ought to do its best to keep its own properties as holy and prosperous as possible.) Therefore:

54. When one of the properties falls away from this condition of holiness and prosperity to such an extent that the possessor leaves no children to succeed him, being unmarried, or married but childless, and meets his end convicted of
(a) (i) deliberate murder, or
(ii) some other crime against gods or citizens for which the death penalty is specifically laid down by law, or if
(b) someone without male issue goes into permanent exile,
first of all, this property must be cleansed and purified according to law;
878 then the relatives must hold the meeting we mentioned just now, and in consultation with the Guardians of the Laws pick out a family that has the best reputation for virtue of all the families in the state and is

10. Reading *mē* for *ēdē* in c6.

at the same time fortunate enough to have produced several children. One of these they must adopt on behalf of the deceased's father and forebears, who will receive him as their son; from them he will take his name, which should be an omen of good fortune. The relatives should pray that as a result of his adoption he will bring them children, and guard the hearth and look after the family affairs, both sacred and secular, with greater success than his adoptive father enjoyed. In this b
way they should install him, according to law, as heir to the property.
(c) When such disasters as we have mentioned [54.(a,b)] overwhelm the sinner,
they should let him lie nameless in his grave, childless and deprived of his family estate.

We can see that it is not universally true that one district extends right up to the boundary of another. In some cases there is a no man's land in between, which will extend so as to touch either boundary and occupy an intermediate position between the two. This, we said,[11] was true of an act done in anger: it falls somewhere between voluntary and involuntary. Our regulations concerning wounding inflicted in anger should therefore run as follows:

55 A. If a man is found guilty, and c
(a) the wound turns out to be curable,
he must pay double damages;
(b) if it is incurable,
he must pay quadruple damages.
(c) If he has inflicted a wound which, though curable, makes the wounded man feel acutely embarrassed and ashamed,
he must pay triple damages.
B. If one man wounds another and injures not only his victim but the state, by rendering him unable to defend his fatherland against the enemy,
he must, in addition to the other penalties, make restitution to the state for the loss it has sustained, viz. he must perform not only his own military service but that of the incapacitated person as well by serving d
in the army on his behalf.
C. If he fails so to serve,
he shall be liable under the law to a charge of evading military service, at the hands of anyone who wishes.
A. cont. The assessment of the damages, double, triple, or quadruple, must be made by the judges who found him guilty.
D. If one relative wounds another in any of these ways,
the fellow clansmen and close relatives, male and female, as far as sons of cousins on both the male and female side, must hold a meeting, and e

11. See 866d–867c.

when they have reached their verdict, they must entrust the assessment to the natural parents. If the assessment is challenged, the assessment of the relatives on the male side must be taken as final. If they cannot agree themselves, they must, in the end, hand over the matter to the Guardians of the Laws.

E. When children inflict this kind of wound on their parents, it is essential for the judges to be parents over sixty years of age who have children of their own and not merely adopted ones. If a man is found guilty,

these judges must decide whether a man who could do such a thing as this should die, or whether the penalty should be something even more severe,[12] or perhaps something a trifle less severe. None of the relations of
879 the culprit should act as a judge, not even if he is of the age required by law.

F. (a) If a slave wounds a free man in anger,

the owner must hand him over to the wounded man, who may treat him in whatever way he likes.

(b) If the owner fails to hand him over,

he must remedy the damage himself.

(c) If anyone alleges that the affair is the result of collusion between the slave and the wounded party, he must contest the point at law. If he does not win the case,

he must pay triple damages.

If he does win, he must prosecute the author of the collusion with the slave on a charge of kidnapping.

56. If anyone involuntarily wounds someone else,

b *he must* pay simple damages. (No legislator is capable of regulating the workings of chance.) The judges are to be the same as those appointed to try children who wound their parents; and they will have the duty of assessing the amount of the damages.

ATHENIAN: All the injuries we have so far mentioned involve the use of violence, and so too do the various kinds of assault. In these cases, the point that every man, woman and child should bear in mind is this:

Age is always very much more highly regarded than youth, and this is
c so both among the gods and among men, if they intend to live in security and happiness. Therefore, the assault of an older man by a younger in public is a disgusting sight, and the gods hate to see it. No young man who is struck by an old man should ever make a fuss, but put up with his bad temper, and so establish a claim to similar respect when he himself grows old.

Our law, then, should run as follows:

Everyone in our community must show, by his words and actions, respect for his senior. A man should avoid crossing any person (male or female) who is twenty years older than himself, regarding him or her in the same way as he would his father or mother. For the sake of the gods

12. Such as deprivation of burial.

of birth, he must always keep himself from striking anyone old enough to have been his parent. Similarly, he must refrain from striking a foreigner, whether the latter is a long-established resident or a recent immigrant. He must never go so far as to punish such a person by hitting him, either by attacking him first, or in self-defense. d

57 A. (a) If he thinks the foreigner is unruly and insolent in an attack on himself, and needs to be punished, he must arrest him and take him, without hitting him, to the court of the City-Wardens, so that the foreigner may learn to banish all thoughts of ever striking a citizen again. e
The City-Wardens must take the man and interrogate him, with proper respect for the god who is the protector of foreigners. If in fact the foreigner seems to have been in the wrong in striking the citizen,
the City-Wardens must put a stop to this unruliness, so characteristic of a foreigner; they must give him as many strokes of the lash as will equal the number of blows he himself inflicted.
(b) If he is not in the wrong,
they must warn and rebuke the man who made the arrest, and dismiss the pair of them.
B. If one man strikes another who
(a) is about the same age, or
(b) is older, but has no children,
whether the attacker is an old man striking an old man, or a young man 880
striking a young man, the man attacked must defend himself by natural means—with his own bare hands, without a weapon. But if a man over forty years of age has the face to fight someone, whether
(i) he strikes the first blow, or
(ii) fights in self-defense,
he will get the reputation of being an uncivilized boor with the manners of a slave, and this ignominious punishment will serve him right.

A man who is easily persuaded by these words of exhortation will give us no trouble; but stubborn people, who ignore the preamble, ought to be ready to take more notice of the following regulations:

C. If anyone strikes a man twenty years or more his senior, any bystander, b
if he is neither of the same age nor younger than the combatants, should separate them,
or be treated under the law as a wretched coward. If he is of the same age as the person attacked, or younger, he should go to his assistance as if it were his own brother or father being wronged, or some still more senior relative.
D. In addition, the man who dares to strike his senior as defined[13] must stand trial for assault. If he loses the case,

13. I.e., someone twenty years older.

c *he must* be imprisoned for not less than a year. If the court fixes a longer imprisonment, the period it decides on shall stand.
E. If a foreigner, or a resident alien, strikes a man twenty years or more his senior, the same regulation [57C] about assistance from passers-by shall be enforced in the same way as before.
(a) A man found guilty of such a charge, if he is a foreigner not resident in the state,
must pay his penalty by spending two years in prison.
(b) If it is a resident alien who is in breach of these regulations,
he must go to prison for three years, except that the court may specify
d a longer period by way of penalty.
F. The passer-by who comes across any of these cases of assault and does not give assistance as required by law
must be fined: a member of the first property-class one hundred drachmas, a member of the second fifty drachmas, a member of the third thirty drachmas, and a member of the fourth twenty drachmas. The court in such cases is to consist of the Generals, Company-Commanders, Tribe-Leaders and Cavalry-Commanders.

Some laws, it seems, are made for the benefit of honest men, to teach them the rules of association that have to be observed if they are to live
e in friendship; others are made for those who refuse to be instructed and whose naturally tough natures have not been softened enough to stop them turning to absolute vice. It will be they who have prompted the points I am just going to make, and it is for their benefit that the lawgiver will be compelled to produce his laws, although he would wish never to find any occasion to use them. Consider a man who will dare to lay hands on his father or mother or their forebears by way of violent assault. He will fear neither the wrath of the gods above nor the punishments said to
881 await him in the grave; he will hold the ancient and universal tradition in contempt, on the strength of his 'knowledge' in a field where he is in fact a total ignoramus. He will therefore turn criminal, and will stand in need of some extreme deterrent. Death, however, is not an extreme and final penalty; the sufferings said to be in store for these people in the world to come are much more extreme than that. But although the threat of these sufferings is no idle one, it has no deterrent effect at all on souls like these. If it did, we should never have to deal with assaults on mothers, and
b wicked and presumptuous attacks on other forebears. I conclude, therefore, that the punishments men suffer for these crimes here on earth while they are alive should as far as possible equal the penalties beyond the grave.
Our next enactment, then, should run as follows:

G. If a man who is not in the grip of insanity dares to strike his father or mother, or their father or mother, the first point is that the passer-by must render assistance as provided in former cases.
(a)(i) If the resident alien renders assistance,
he shall be invited to a front seat at the games;

(ii) if he does not render assistance,
he must go into permanent exile from the land.
(b)(i) If the non-resident alien renders assistance, c
he shall be commended.
(ii) If he does not render assistance,
he must be reprimanded.
(c)(i) If a slave renders assistance,
he shall be set free.
(ii) If he does not render assistance,
he must receive a hundred strokes of the lash.
If the crime was committed in the market-place, the whipping should be administered by the Market-Wardens; if in the city but not in the market, by the City Warden in residence; if somewhere in the country-side, by the chief Country-Wardens.
(d) Everyone of citizen birth who passes by, whether man, woman or child, must shout 'you wicked monster' at the attacker, and repel him. d
If the passer-by makes no attempt to repel him,
he must be liable under the law to a curse from Zeus, guardian of the family and protector of parents.
H. If a man is convicted of an assault on his parents,
he must be permanently rusticated from the city to some other part of the country, and be banned from all sacred places.
I. (a) If he returns to the city,
he must be punished by death,
(b) If he does not keep away from sacred places,
the Country-Wardens must punish him by a whipping, and by any other method at their discretion.
J. (a) If any free man eats or drinks in company with such a person, or associates with him in some other similar fashion, even by deliberately e
failing to cut him on meeting,
he must not enter any temple, or market-place, or any part of the city, before he has been purified, bearing in mind that he has come into contact with a misfortune that brings a curse upon a man.
K. If he disobeys the law and in defiance of it pollutes temples and city,
any official who discovers the fact and does not take the man to court will find that this is one of the most serious charges against him at his scrutiny.[14]
L. If a slave strikes a free man, foreigner or citizen, the passer-by who 882
does not render assistance
must pay the penalty prescribed for his property-class.
M. The passers-by in conjunction with the person attacked must bind the slave and hand him over to his victim; the victim must take him, b
put him in chains, and give him as many strokes of the whip as he likes,

14. At the end of their term officials had to submit to an examination of their conduct in office before being discharged; see 945e–947b.

provided he does not diminish the value of the slave to his master; he should then hand him over to the latter's legal ownership. This legal ownership must be subject to the following provision. Any slave who has struck a free man, other than on the orders of the officials, must be
c tied up; his master must receive him from the assaulted person and not release him before the slave persuades his victim that he deserves to live free of constraint.

The same regulations should apply in all cases (a) of women against each other, (b) of women against men, and (c) of men against women.

Book X

884 ATHENIAN: So much for cases of assault. Now let's state a single comprehensive rule to cover acts of violence. It will run more or less like this. No one may seize or make off with other people's property, nor use any of his neighbor's possessions without getting the permission of the owner. Contempt for this principle has always been (and still is and always will be) the source of all the evils just mentioned. But there are other acts of violence, too, of which the worst are the insolence and outrageous actions of the young. These actions are most serious when they affect sacred objects; and the damage is particularly grave when it is done to sacred property that also belongs to the public, or is held in common by the
885 members of a sub-division of the state, such as a tribe or some similar association. Second, and second in order of gravity, comes wanton damage to sacred objects that are privately owned, particularly tombs; third come attacks (apart from those already dealt with) on parents. A fourth category of outrageous conduct is when someone ignores the wishes of the authorities and seizes or removes or uses something belonging to them without their permission; and any violations of the civil rights of the private citizen which demand legal redress will constitute a fifth class. We have to frame a comprehensive law that will cover each individual case. As for robbery from temples, whether clandestine or open and violent, we have already specified in general terms the appropriate punishment;[1] but our statement
b of the penalty for offensive remarks about the gods or outrageous actions against their interests should be prefaced by these words of exhortation:

No one who believes in gods as the law directs ever voluntarily commits an unholy act or lets any lawless word pass his lips. If he does, it is because of one of three possible misapprehensions: either, as I said, he believes (1) the gods do not exist, or (2) that they exist but take no thought for the human race, or (3) that they are influenced by sacrifices and supplications and can easily be won over.

c CLINIAS: So what's the right thing for us to do or say to these people?

1. See 854d ff.

ATHENIAN: My friend, let's listen to the ridicule and scorn with which I imagine they put their case.

CLINIAS: What ridicule?

ATHENIAN: They'll probably go in for bantering, and address us like this: 'Gentlemen of Athens, of Sparta and of Crete, you are quite right. Some of us are indeed absolute atheists, whereas others do believe in such gods as you describe. So we demand of you what you yourselves demanded of the laws, that before you resort to threats and bullying, you should try d to convince us by argument and cogent proofs that gods do exist, and that they are in fact above being seduced by gifts into turning a blind eye to injustice. But you see, it's precisely in these and similar terms that we hear them spoken of by the most highly thought-of poets and orators and prophets and priests and thousands of other people too. That's why most of us make little effort to avoid crime, but commit it first and try to put e things right afterwards. So from lawgivers who profess to use the velvet glove rather than the iron fist we claim the right to be tackled by persuasion first. Even if, when you state your case for the existence of gods, your elegance of expression is only marginally superior to your opponents', persuade us that your argument is a better expression of the *truth*, and then perhaps we'll believe you. Isn't that fair enough? Well then, try to reply to our challenge.'

CLINIAS: Well sir, don't you think that the gods' existence is an easy truth to explain?

ATHENIAN: How? 886

CLINIAS: Well, just look at the earth and the sun and the stars and the universe in general; look at the wonderful procession of the seasons and its articulation into years and months! Anyway, you know that all Greeks and all foreigners are unanimous in recognizing the existence of gods.

ATHENIAN: My dear sir, when I think of the contempt these scoundrels will probably feel for us, I'm overcome with embarrassment—no, I withdraw that word: let's say they 'alarm' me—because you don't appreciate the real grounds of their opposition to you. You think it's just because they can't resist temptation and desire that they are attracted to the godless life. b

CLINIAS: What other reason could there be, sir?

ATHENIAN: A reason which you two, living rather off the beaten track as you do, simply wouldn't appreciate. It will have completely passed you by.

CLINIAS: What are you talking about now?

ATHENIAN: A form of ignorance that causes no end of trouble, but which passes for the height of wisdom.

CLINIAS: How do you mean?

ATHENIAN: In Athens a number of written works are current which are not found in your states (which are, I understand, too well run to tolerate c them). The subject of these writings (some of which are in verse, others in prose) is theology. The most ancient accounts, after relating how the primitive substances—the sky and so on—came into being, pass rapidly

on to a description of the birth of the gods and the details of how once born they subsequently treated each other. On some subjects, the antiquity of these works makes them difficult to criticize, whatever their influence—good or bad—on their audience; but when it comes to the respect and
d attention due to parents, I for one shall never recommend them either as a good influence or as a statement of the honest truth. Still, there's no need to bother with this old material: we may freely allow it to be arranged and recounted in any way the gods find amusing. But the principles of our modern pundits do need to be denounced as a pernicious influence. Just look at the effects of their arguments! When you and I present our proofs for the existence of gods and adduce what you adduced—sun, moon, stars and earth—and argue they are gods and divine beings, the
e proselytes of these clever fellows will say that these things are just earth and stones, and are incapable of caring for human affairs, however much our plausible rhetoric has managed to dress them up.

CLINIAS: Even if it were unique, sir, that theory you've just described would make trouble. But as similar doctrines in fact exist in their thousands, the situation is even worse.

ATHENIAN: What now, then? What's our reply? What must we do? It's as though we were on trial before a bench of godless judges, defending
887 ourselves on a charge arising out of our legislation. 'It's monstrous,' they say to us, 'that you should pass laws asserting that gods exist.' Shall we defend ourselves? Or shall we ignore them and get back to our legislation, so that the mere preface doesn't turn out longer than the actual code? You see, if we're going to postpone passing the appropriate legislation until we've proved properly to those with a taste for impiety all the points they insisted we had to cover, so that they feel uneasy and begin to find their views going sour on them, our explanation will be anything but brief.

b CLINIAS: Even so, sir, as we've often said in the comparatively short time we've been talking, there's no reason at the moment to prefer a brief explanation to a full one: after all, no one's 'breathing down our neck' (as they say). It would be an awful farce, if we appeared to be putting brevity first and quality second. It's vital that somehow or other we should make out a plausible case for supposing that gods do exist, that they are good, and that they respect justice more than men do. Such a demonstration would constitute just about the best and finest preamble our penal code
c could have. So let's overcome our reluctance and unhurriedly exert what powers of persuasion we have in this field, devoting ourselves wholeheartedly to a full exposition of our case.

ATHENIAN: How keen and insistent you are! I take it you're suggesting we should now offer up a prayer for the success of our exposition, which we certainly can't delay any longer.

Well now, how *can* one argue for the existence of gods without getting angry? You see, one inevitably gets irritable and annoyed with these people
d who have put us to the trouble, and continue to put us to the trouble, of composing these explanations. If only they believed the stories which they

had as babes and sucklings from their nurses and mothers! These almost literally 'charming' stories were told partly for amusement, partly in full earnest; the children heard them related in prayer at sacrifices, and saw acted representations of them—a part of the ceremony a child always loves to see and hear; and they saw their own parents praying with the utmost seriousness for themselves and their families in the firm conviction that their prayers and supplications were addressed to gods who really did e
exist. At the rising and setting of the sun and moon the children saw and heard Greeks and foreigners, in happiness and misery alike, all prostrate at their devotions; far from supposing gods to be a myth, the worshippers believed their existence to be so sure as to be beyond suspicion. When some people contemptuously brush aside all this evidence without a single good reason to support them (as even a half-wit can see) and oblige us to 888
deliver this address—well, how could one possibly admonish them and at the same time teach them the basic fact about gods, their existence, without using the rough edge of one's tongue? Still, we must make the best of it: we don't want both sides maddened at once, they by their greed for pleasure, we by our anger at their condition. So our address to men with such a depraved outlook should be calm, and run as follows. Let's use honeyed words and abate our anger, and pretend we're addressing just one representative individual.

'Now then, my lad, you're still young, and as time goes on you'll come b
to adopt opinions diametrically opposed to those you hold now. Why not wait till later on to make up your mind about these important matters? The most important of all, however lightly you take it at the moment, is to get the right ideas about the gods and so live a good life:—otherwise you'll live a bad one. In this connection, I want first to make a crucial and irrefutable point. It's this: you're not unique. Neither you nor your friends are the first to have held this opinion about the gods. It's an illness from which the world is never free, though the number of sufferers varies from time to time. I've met a great many of them, and let me assure you that c
none of them who have been convinced early in life that gods do not exist have ever retained that belief into old age. However, it is true that some men (but not many) do persist in laboring under the impression either that although the gods exist they are indifferent to human affairs, or alternatively that they are not indifferent but can easily be won over by prayers and sacrifices. Be guided by me: you'll only see this business in its truest light if you wait to gather your information from all sources, d
particularly the legislator, and then see which theory represents the truth. In the meantime, don't venture any impiety where gods are concerned. You may take it that it will be up to your lawgiver, now and in the future, to try to enlighten you on precisely these topics.'

CLINIAS: So far, sir, that's very well said.

ATHENIAN: Certainly, Megillus and Clinias, but what an amazing doctrine we've got involved in, without noticing it!

CLINIAS: What doctrine do you mean?

e ATHENIAN: I mean the one which many people regard as the highest truth of all.

CLINIAS: Please be more explicit.

ATHENIAN: Some people, I believe, account for all things which have come to exist, all things which are coming into existence now, and all things which will do so in the future, by attributing them either to nature, art, or chance.

CLINIAS: Isn't that satisfactory?

889 ATHENIAN: Oh, I expect they've got it more or less right—they're clever fellows. Still, let's keep track of them, and see what's really implied in the theories of that school of thought.

CLINIAS: By all means.

ATHENIAN: The facts show—so they claim—that the greatest and finest things in the world are the products of nature and chance, the creations of art being comparatively trivial. The works of nature, they say, are grand and primary, and constitute a ready-made source for all the minor works constructed and fashioned by art—*art*efacts, as they're generally called.

CLINIAS: How do you mean?

b ATHENIAN: I'll put it more precisely. They maintain that fire, water, earth and air owe their existence to nature and chance, and in no case to art, and that it is by means of these entirely inanimate substances[2] that the secondary physical bodies—the earth, sun, moon and stars—have been produced. These substances moved at random, each impelled by virtue of its own inherent properties, which depended on various suitable amalgamations of hot and cold, dry and wet, soft and hard, and all other haphazard combinations that inevitably resulted when the opposites were c mixed. This is the process to which all the heavens and everything that is in them owe their birth, and the consequent establishment of the four seasons led to the appearance of all plants and living creatures. The cause of all this, they say, was neither intelligent planning, nor a deity, nor art, but—as we've explained—nature and chance. Art, the brain-child of these living creatures, arose later, the mortal child of mortal beings; it has pro- d duced, at a late stage, various amusing trifles that are hardly real at all—mere insubstantial images of the same order as the arts themselves (I mean for instance the productions of the arts of painting and music, and all their ancillary skills). But if there are in fact some techniques that produce worthwhile results, they are those that *co-operate* with nature, like medicine and farming and physical training. This school of thought maintains that government, in particular, has very little to do with nature, and is largely e a matter of art; similarly legislation is never a natural process but is based on technique, and its enactments are quite artificial.

CLINIAS: What are you driving at?

ATHENIAN: My dear fellow, the first thing these people say about the gods is that they are artificial concepts corresponding to nothing in nature;

2. Or possibly, 'by these entirely inanimate agencies' (i.e., nature and chance).

they are legal fictions, which moreover vary very widely according to the different conventions people agree on when they produce a legal code. In particular, goodness according to nature and goodness according to the law are two different things, and there is no natural standard of justice at all. On the contrary, men are always wrangling about their moral standards and altering them, and every change introduced becomes binding from the moment it's made, regardless of the fact that it is entirely artificial, 890
and based on convention, not nature in the slightest degree. All this, my friends, is the theme of experts—as our young people regard them—who in their prose and poetry maintain that anything one can get away with by force is absolutely justified. This is why we experience outbreaks of impiety among the young, who assume that the kind of gods the law tells them to believe in do not exist; this is why we get treasonable efforts to convert people to the 'true natural life', which is essentially nothing but a life of conquest over others, not one of service to your neighbor as the law enjoins.

CLINIAS: What a pernicious doctrine you've explained, sir! It must be b
the ruin of the younger generation, both in the state at large and in private families.

ATHENIAN: That's very true, Clinias. So what do you think the legislator ought to do, faced with such a long-established thesis as this? Is he simply to stand up in public and threaten all the citizens with punishment if they don't admit the existence of gods and mentally accept the law's description of them? He could make the same threat about their notions of beauty and justice and all such vital concepts, as well as about anything that encourages virtue or vice; he could demand that the citizens' belief and c
actions should accord with his written instructions, and insist that anyone not showing the proper obedience to the laws must be punished either by death, or by a whipping and imprisonment, deprivation of civic rights, or by being sent into exile a poorer man. But what about *persuading* them? When he establishes a legal code for his people, shouldn't he try to talk them into being as amenable as he can make them?

CLINIAS: Certainly, sir. If even limited persuasion can be applied in this d
field, no legislator of even moderate ability should shrink from making the effort. On the contrary, he should argue 'till the cows come home', as the saying is, to back up the old doctrine that the gods exist, and to support the other arguments you ran through just now. In particular, he should defend law itself and art as either part of nature or existing by reason of some no less powerful agency—being in fact, to tell the truth, creations of reason. That, I think, is the point you're making, and I agree.

ATHENIAN: Really, Clinias, you *are* enthusiastic! But when these themes e
are presented as you suggest, in addresses composed for a popular audience, aren't they found rather difficult to understand? And don't the addresses tend to go on for ever?

CLINIAS: Well, sir, we put up with one long discussion, about inebriation in the cause of culture, so surely we can tolerate another, about theology

and so forth. And of course this helps intelligent legislation tremendously,
891 because legal instructions, once written down, remain fixed and permanent, ready to stand up to scrutiny forever. So there's no reason for alarm if at first they make difficult listening, because your slow learner will be able to go back again and again and examine them. Nor does their length, provided they're useful, justify any man in committing what seems to me, at least, an impiety: I mean refusing to facilitate these explanations as best he can.

MEGILLUS: Yes, sir, I entirely approve of what Clinias says.

b ATHENIAN: As well you may, Megillus, and we must do as he suggests. Of course, if this sort of argument had not been disseminated so widely over pretty well the entire human race, there would be no call for arguments to prove the existence of gods. But in present circumstances we've no choice. When the most important laws are being trampled under foot by scoundrels, whose duty is it to rush to their defense, if not the legislator's?

MEGILLUS: Nobody's.

c ATHENIAN: Now then, Clinias, you must take your share in the explanation, so tell me your opinion again. I assume the upholder of this doctrine thinks of fire and water, earth and air as being the first of all substances, and this is precisely what he means by the term 'nature'; soul, he thinks, was derived from them, at a later stage. No, I do more than 'assume': I'd say he argues the point explicitly.

CLINIAS: True.

ATHENIAN: Now then, by heaven, haven't we discovered the fountainhead, so to speak, of the senseless opinions of all those who have ever undertaken investigation into nature? Scrutinize carefully every stage in
d their argument, because it will be crucial if we can show that these people who have embraced impious doctrines and lead others on are using fallacious arguments rather than cogent ones—which I think is in fact the case.

CLINIAS: You're right, but try to explain their error.

ATHENIAN: Well, it looks as if we have to embark on a rather unfamiliar line of argument.

CLINIAS: Don't hesitate, sir. I realize you think we'll be straying outside legislation if we attempt such an explanation, but if this is the only way
e to reach agreement that the beings currently described as gods in our law are properly so described, then this, my dear sir, is the kind of explanation we must give.

ATHENIAN: So it looks as if I must now argue along rather unfamiliar lines. Well then, the doctrine which produces an impious soul also 'produces', in a sense, the soul itself, in that it denies the priority of what was in fact the first cause of the birth and destruction of all things, and regards it as a later creation. Conversely, it asserts that what actually came later, came first. That's the source of the mistake these people have made about the real nature of the gods.

892 CLINIAS: So far, the point escapes me.

ATHENIAN: It's the *soul*, my good friend, that nearly everybody seems to have misunderstood, not realizing its nature and power. Quite apart

from the other points about it, people are particularly ignorant about its birth. It is one of the *first* creations, born long before all physical things, and is the chief cause of all their alterations and transformations. Now if that's true, anything closely related to soul will necessarily have been created before material things, won't it, since soul itself is older than matter? b

CLINIAS: Necessarily.

ATHENIAN: Opinion, diligence, reason, art and law will be prior to roughness and smoothness, heaviness and lightness. In particular, the grand and primary works and creations, precisely *because* they come in the category 'primary', will be attributable to art. Natural things, and nature herself—to use the mistaken terminology of our opponents—will be secondary products from art and reason.

CLINIAS: Why do you say 'mistaken'? c

ATHENIAN: When they use the term 'nature', they mean the process by which the primary substances were created. But if it can be shown that soul came first, not fire or air, and that it was one of the first things to be created, it will be quite correct to say that soul is preeminently natural. This is true, provided you can demonstrate that soul is older than matter, but not otherwise.

CLINIAS: Very true.

ATHENIAN: So this is precisely the point we have to tackle next? d

CLINIAS: Of course.

ATHENIAN: It's an extremely tricky argument, and we old men must be careful not to be taken in by its freshness and novelty, so that it eludes our grasp and makes us look like ridiculous fools whose ambitious ideas lead to failure even in little things. Just consider. Imagine the three of us had to cross a river in spate, and I were the younger and had plenty of experience of currents. Suppose I said, 'I ought to try first on my own e account, and leave you two in safety while I see if the river is fordable for you two older men as well, or if not, just how bad it is. If it turns out to be fordable, I'll then call you and put my experience at your disposal in helping you to cross; but if in the event it cannot be crossed by old men like yourselves, then the only risk has been mine.' Wouldn't that strike you as fair enough? The situation is the same now: the argument ahead runs too deep, and men as weak as you will probably get out of your depth. I want to prevent you novices in answering from being dazed and dizzied by a stream of questions, which would put you in an undignified 893 and humiliating position you'd find most unpleasant. So this is what I think I'd better do now: first I'll ask questions of myself, while you listen in safety; then I'll go over the answers again and in this way work through the whole argument until the soul has been thoroughly dealt with and its priority to matter proved.

CLINIAS: We think that's a splendid idea, sir. Please act on your suggestion.

ATHENIAN: Come then, if ever we needed to call upon the help of God, b it's now. Let's take it the gods have been most pressingly invoked to assist the proof of their own existence, and let's rely on their help as if it were

a rope steadying us as we enter the deep waters of our present theme. Now when I'm under interrogation on this sort of topic, and such questions as the following are put to me, the safest replies seem to be these. Suppose someone asks 'Sir, do all things stand still, and does nothing move? Or is precisely the opposite true? Or do some things move, while others are
c motionless?' My reply will be 'I suppose some move and others remain at rest.' 'So surely there must be some *space* in which the stationary objects remain at rest, and those in motion move?' 'Of course.' 'Some of them, presumably, will do so in one location, others in several?' 'Do you mean', we shall reply, 'that "moving in one location" is the action of objects which are able to keep their centers immobile? For instance, there are circles which are said to "stay put" even though as a whole they are revolving.' 'Yes.' 'And we appreciate that when a disk revolves like that, points near and far from the center describe circles of different radii in the same time;
d their motion varies according to these radii and is proportionately quick or slow. This motion gives rise to all sorts of wonderful phenomena, because these points simultaneously traverse circles of large and small circumference at proportionately high or low speeds—an effect one might have expected to be impossible.' 'You're quite right.' 'When you speak of motion in many locations I suppose you're referring to objects that are always leaving one spot and moving on to another. Sometimes their motion involves only one point of contact with their successive situations, some-
e times several, as in rolling.

'From time to time objects meet; a moving one colliding with a stationary one disintegrates, but if it meets other objects traveling in the opposite direction they coalesce into a single intermediate substance, half one and half the other.' 'Yes, I agree to your statement of the case.' 'Further, such combination leads to an increase in bulk, while their separation leads to diminution—so long as the existing states of the objects remain unimpaired; but if either combination or separation entails the abolition of the existing state, the objects concerned are destroyed.

894 'Now, what conditions are always present when anything is produced? Clearly, an initial impulse grows and reaches the second stage and then the third stage out of the second, finally (at the third stage) presenting percipient beings with something to perceive. This then is the process of change and alteration to which everything owes its birth. A thing exists as such so long as it is stable, but when it changes its essential state it is completely destroyed.'

So, my friends, haven't we now classified and numbered all forms of
b motion, except two?

CLINIAS: Which two?

ATHENIAN: My dear chap, they are the two which constitute the real purpose of every question we've asked.

CLINIAS: Try to be more explicit.

ATHENIAN: What we really had in view was soul, wasn't it?

CLINIAS: Certainly.

ATHENIAN: The one kind of motion is that which is permanently capable of moving other things but not itself; the other is permanently capable of moving *both* itself *and* other things by processes of combination and separation, increase and diminution, generation and destruction. Let these stand as two further distinct types in our complete list of motions. c

CLINIAS: Agreed.

ATHENIAN: So we shall put ninth the kind which always imparts motion to something else and is itself changed by another thing. Then[3] there's the motion that moves both itself and other things, suitable for all active and passive processes and accurately termed the source of change and motion in all things that exist. I suppose we'll call that the tenth.

CLINIAS: Certainly.

ATHENIAN: Now which of our (roughly) ten motions should we be justified in singling out as the most powerful and radically effective? d

CLINIAS: We can't resist the conclusion that the motion which can generate itself is infinitely superior, and all the others are inferior to it.

ATHENIAN: Well said! So shouldn't we correct one or two inaccuracies in the points we've just made?

CLINIAS: What sort of inaccuracy do you mean?

ATHENIAN: It wasn't quite right to call that motion the 'tenth'.

CLINIAS: Why not?

ATHENIAN: It can be shown to be first, in ancestry as well as in power; the next kind—although oddly enough a moment ago we called it 'ninth'— e we'll put second.

CLINIAS: What are you getting at?

ATHENIAN: This: when we find one thing producing a change in another, and that in turn affecting something else, and so forth, will there ever be, in such a sequence, an original cause of change? How could anything whose motion is transmitted to it from something else be the *first* thing to effect an alteration? It's impossible. In reality, when something which has set itself moving effects an alteration in something, and that in turn effects something else, so that the motion is transmitted to thousands upon thousands of things one after another, the entire sequence of their 895 movements must surely spring from some initial principle, which can hardly be anything except the change effected by self-generated motion.

CLINIAS: You've put it admirably, and your point must be allowed.

ATHENIAN: Now let's put the point in a different way, and once again answer our own questions: 'Suppose the whole universe were somehow to coalesce and come to a standstill—the theory which most of our philosopher-fellows are actually bold enough to maintain—which of the motions we have enumerated would inevitably be the first to arise in it?' 'Self- b generating motion, surely, because no antecedent impulse can ever be transmitted from something else in a situation where no antecedent impulse exists. Self-generating motion, then, is the source of all motions, and

3. Inserting *te* after *heautēn* in c4.

the primary force in both stationary and moving objects, and we shan't be able to avoid the conclusion that it is the most ancient and the most potent of all changes, whereas the change which is produced by something else and is in turn transmitted to other objects, comes second.'

CLINIAS: You're absolutely right.

c ATHENIAN: So now we've reached this point in our discussion, here's another question we should answer.

CLINIAS: What?

ATHENIAN: If we ever saw this phenomenon—self-generating motion—arise in an object made of earth, water or fire (alone or in combination) how should we describe that object's condition?

CLINIAS: Of course, what you're really asking me is this: when an object moves itself, are we to say that it is 'alive'?

ATHENIAN: That's right.

CLINIAS: It emphatically is alive.

ATHENIAN: Well then, when we see that a thing has a soul, the situation is exactly the same, isn't it? We have to admit that it is alive.

CLINIAS: Yes, exactly the same.

d ATHENIAN: Now, for heaven's sake, hold on a minute. I suppose you'd be prepared to recognize three elements in any given thing?

CLINIAS: What do you mean?

ATHENIAN: The first point is what the object actually *is*, the second is the definition of this, and the third is the name. And in addition there are two questions to be asked about every existing thing.

CLINIAS: Two?

ATHENIAN: Sometimes we put forward the mere name and want to know the definition, and sometimes we put forward the definition and ask for the name.

CLINIAS: I take it the point we want to make at the moment is this.

ATHENIAN: What?

e CLINIAS: In general, things can be divided into two, and this is true of some numbers as well. Such a number has the *name* 'even' and its *definition* is 'a number divisible into two equal parts'.

ATHENIAN: Yes, that's the sort of thing I mean. So surely, in either case—whether we provide the name and ask for the definition or give the definition and ask for the name—we're referring to the same object? When we *call* it 'even' and *define* it as 'a number divisible into two', it's the same thing we're talking about.

CLINIAS: It certainly is.

896 ATHENIAN: So what's the definition of the thing we call the soul? Surely we can do nothing but use our formula of a moment ago: 'motion capable of moving itself'.

CLINIAS: Do you mean that the entity which we all *call* 'soul' is precisely that which is *defined* by the expression 'self-generating motion'?

ATHENIAN: I do. And if this is true, are we still dissatisfied? Haven't we got ourselves a satisfactory proof that soul is identical with the original

source of the generation and motion of all past, present and future things and their contraries? After all, it has been shown to be the cause of all change and motion in everything. b

CLINIAS: Dissatisfied? No! On the contrary, it has been proved up to the hilt that soul, being the source of motion, is the most ancient thing there is.

ATHENIAN: But when one thing is put in motion by another, it is never thereby endowed with the power of independent self-movement. Such derived motion will therefore come second, or as far down the list as you fancy relegating it, being a mere change in matter that quite literally 'has no soul'.

CLINIAS: Correctly argued.

ATHENIAN: So it was an equally correct, final and complete statement of the truth, when we said that soul is prior to matter, and that matter c came later and takes second place. Soul is the master, and matter its natural subject.

CLINIAS: That is indeed absolutely true.

ATHENIAN: The next step is to remember our earlier admission that if soul were shown to be older than matter, the spiritual order of things would be older than the material.

CLINIAS: Certainly.

ATHENIAN: So habits, customs, will, calculation, right opinion, diligence d and memory will be prior creations to material length, breadth, depth and strength, if (as is true) soul is prior to matter.

CLINIAS: Unavoidably.

ATHENIAN: And the next unavoidable admission, seeing that we are going to posit soul as the cause of *all* things, will be that it is the cause of good and evil, beauty and ugliness, justice and injustice and all the opposites.

CLINIAS: Of course.

ATHENIAN: And surely it's necessary to assert that as soul resides and e keeps control anywhere where anything is moved, it controls the heavens as well.

CLINIAS: Naturally.

ATHENIAN: One soul, or more than one? I'll answer for you both: more than one. At any rate, we must not assume fewer than two: that which does good, and that which has the opposite capacity.

CLINIAS: That's absolutely right.

ATHENIAN: Very well, then. So soul, by virtue of its own motions, stirs into movement everything in the heavens and on earth and in the sea. The names of the motions of soul are: wish, reflection, diligence, counsel, 897 opinion true and false, joy and grief, cheerfulness and fear, love and hate. Soul also uses all related or initiating motions which take over the secondary movements of matter and stimulate everything to increase or diminish, separate or combine, with the accompanying heat and cold, heaviness and lightness, roughness and smoothness, white and black, bitter and sweet.

These are the instruments soul uses, whether it cleaves to divine reason
b (soul itself being, if the truth were told, a divinity), and guides everything to an appropriate and successful conclusion, or allies itself with unreason and produces completely opposite results. Shall we agree this is the case, or do we still suspect that the truth may be different?

CLINIAS: By no means.

ATHENIAN: Well then, what kind of soul may we say has gained control of the heavens and earth and their entire cycle of movement? Is it the rational and supremely virtuous kind, or that which has neither advantage?
c Would you like our reply to run like this?

CLINIAS: How?

ATHENIAN: 'If, my fine fellow' (we should say) 'the whole course and movement of the heavens and all that is in them reflect the motion and revolution and calculation of reason, and operate in a corresponding fashion, then clearly we have to admit that it is the best kind of soul that cares for the entire universe and directs it along the best path.'

CLINIAS: True.

ATHENIAN: 'If however these things move in an unbalanced and disorga-
d nized way, we must say the evil kind of soul is in charge of them.'

CLINIAS: That too is true.

ATHENIAN: 'So what is the nature of rational motion?' Now this, my friends, is a question to which it is difficult to give an answer that will make sense, so you're justified here in calling me in to help with your reply.

CLINIAS: Good.

ATHENIAN: Still, in answering this question we mustn't assume that mortal eyes will ever be able to look upon reason and get to know it adequately: let's not produce darkness at noon, so to speak, by looking at
e the sun direct. We can save our sight by looking at an *image* of the object we're asking about.

CLINIAS: How do you mean?

ATHENIAN: What about selecting from our list of ten motions the one which reason resembles, and taking that as our image? I'll join you in recalling it, and then we'll give a joint answer to the question.

CLINIAS: Yes, that's probably your best method of explanation.

ATHENIAN: Do we still remember at any rate this from the list of points we made earlier, that all things are either in motion or at rest?

CLINIAS: Yes, we do.

ATHENIAN: And some of those in motion move in a single location, others
898 in a succession of locations?

CLINIAS: That is so.

ATHENIAN: Of these two motions, that taking place in a single location necessarily implies continuous revolution round a central point, just like wheels being turned on a lathe; and this kind of motion bears the closest possible affinity and likeness to the cyclical movement of reason.

CLINIAS: What do you mean?

ATHENIAN: Take reason on the one hand, and motion in a single location on the other. If we were to point out that in both cases the motion was determined by a single plan and procedure and that it was (a) regular, (b) b
uniform, (c) always at the same point in space, (d) around a fixed center, (e) in the same position relative to other objects, and were to illustrate both by the example of a sphere being turned on a lathe, then no one could ever show us up for incompetent makers of verbal images.

CLINIAS: You're quite right.

ATHENIAN: Now consider the motion that is never uniform or regular or at the same point in space or round the same center or in the same relative position or in a single location, and is neither planned nor organized nor systematic. Won't that motion be associated with every kind of unreason?

CLINIAS: Absolutely true, it will.

ATHENIAN: So now there's no difficulty in saying right out that since we c
find that the entire cycle of events is to be attributed to soul, the heavens that we see revolving must necessarily be driven round—we have to say—because they are arranged and directed *either* by the best kind of soul *or* by the other sort.

CLINIAS: Well, sir, judging from what has been said, I think it would be rank blasphemy to deny that their revolution is produced by one or more souls blessed with perfect virtue.

ATHENIAN: You've proved a most attentive listener, Clinias. Now attend to this further point. d

CLINIAS: What?

ATHENIAN: If, in principle, soul drives round the sun, moon and the other heavenly bodies, does it not impel each individually?

CLINIAS: Of course.

ATHENIAN: Let's take a single example: our results will then obviously apply to all the other heavenly bodies.

CLINIAS: And your example is . . .?

ATHENIAN: . . . the sun. Everyone can see its body, but no one can see its soul—not that you could see the soul of any other creature, living or dying. Nevertheless, there are good grounds for believing that we are in fact held in the embrace of some such thing though it is totally below the level of our bodily senses, and is perceptible by reason alone. So by reason e
and understanding let's get hold of a new point about the soul.

CLINIAS: What?

ATHENIAN: If soul drives the sun, we shan't go far wrong if we say that it operates in one of three ways.

CLINIAS: And what are they?

ATHENIAN: Either (a) the soul resides within this visible spherical body and carries it wherever it goes, just as *our* soul takes us around from one place to another, or (b) it acquires its own body of fire or air of some kind 899
(as certain people maintain), and impels the sun by the external contact

of body with body, or (c) it is entirely immaterial, but guides the sun along its path by virtue of possessing some other prodigious and wonderful powers.

CLINIAS: Yes, it must necessarily be by one of these methods that the soul manages the universe.

ATHENIAN: Now, just wait a minute. Whether we find that it is by stationing itself in the sun and driving it like a chariot, or by moving it from outside, or by some other means, that this soul provides us all with light, every single one of us is bound to regard it as a god. Isn't that right?

b CLINIAS: Yes, one would be absolutely stupid not to.

ATHENIAN: Now consider all the stars and the moon and the years and the months and all the seasons: what can we do except repeat the same story? A soul or souls—and perfectly virtuous souls at that—have been shown to be the cause of all these phenomena, and whether it is by their living presence in matter that they direct all the heavens, or by some other means, we shall insist that these souls are gods. Can anybody admit all this and still put up with people who deny that 'everything is full of gods'?[4]

c CLINIAS: No sir, nobody could be so mad.

ATHENIAN: Now then, Megillus and Clinias, let's delimit the courses of action open to anyone who has so far refused to believe in gods, and get rid of him.

CLINIAS: You mean . . .

ATHENIAN: . . . *either* he should demonstrate to us that we're wrong to posit soul as the first cause to which everything owes its birth, and that our subsequent deductions were equally mistaken, *or*, if he can't put a better case than ours, he should let himself be persuaded by us and live the rest of his life a believer in gods. So let's review the thesis we argued

d for the existence of gods against the non-believers: was it cogent or feeble?

CLINIAS: Feeble, sir? Not in the least.

ATHENIAN: Very well. So far as atheists are concerned, we may regard our case as complete. Next we have to use some gentle persuasion on the man who believes in gods but thinks they are unconcerned about human affairs. 'My splendid fellow,' we'll say, 'your belief in the existence of gods probably springs from a kind of family tie between you and the gods that draws you to your natural kin and makes you honor them and recognize their existence. What drives you to impiety is the good fortune of scoundrels

e and criminals in private and public life—which in reality is not good fortune at all, although it is highly admired as such by popular opinion and its misplaced enthusiasms: poetry and literature of every kind invest it with a pernicious glamour. Or perhaps you observe men reaching the

900 end of their lives, full of years and honor, leaving behind them their children's children, and your present disquiet is because you've discovered

4. A remark attributed to Thales (*c.* 600 B.C.), traditionally the first philosopher.

(either from hearsay or personal observation) a few of the many ghastly acts of impiety which (you notice) are the very means by which some of these people have risen from humble beginnings to supreme power and dictatorships. The result is that although by virtue of your kinship with the gods you'd clearly be reluctant to lay such things at their door, your mental confusion and your inability to find fault with them has brought b
you to your present predicament where you believe they exist, but despise and neglect human affairs. Now, we want to prevent your thoughts from becoming more impious than they are already: let's see if argument will ward off the disease while it is still in its early stages. We must also try to make use of the original thesis we argued so exhaustively against the absolute atheist, by linking the next step in the exposition on to it.' So you, Clinias and Megillus, must do what you did before: take the young man's c
place and answer on his behalf. If any difficulty crops up in the argument, I'll take over from you two as I did just now, and conduct you across the river.

CLINIAS: Good idea. You play your part, and we'll carry out your suggestions to the best of our ability.

ATHENIAN: Still, perhaps it won't be too difficult to show our friend that gods are just as attentive to details as to important matters—more so, in fact. You see, he was here a moment ago and heard that their special job— d
an expression of their perfect virtue—is to watch over the universe.

CLINIAS: Yes, he certainly did hear that said.

ATHENIAN: The next thing is for our opponents to join us in asking this question: what particular virtue have we in mind when we agree that the gods are good? Now then: don't we regard moderation and the possession of reason as a mark of virtue, and their opposites as marks of vice?

CLINIAS: We do.

ATHENIAN: What about courage and cowardice? Are we agreed they e
come under virtue and vice respectively?

CLINIAS: Certainly.

ATHENIAN: And we'll label the one set of qualities 'disgraceful' and the other 'admirable'?

CLINIAS: Yes, we must.

ATHENIAN: And if the base qualities are characteristic of anyone, they are characteristic of us; the gods, we shall say, are *not* affected by them, either radically or slightly.

CLINIAS: No one would disagree with that either.

ATHENIAN: Well, then, shall we regard neglect and idleness and riotous living as part of the soul's virtue? Or what's your view?

CLINIAS: Really!

ATHENIAN: As part of vice, then?

CLINIAS: Yes.

ATHENIAN: So it's the opposite qualities that will be ascribed to virtue? 901

CLINIAS: Right.

ATHENIAN: Very well then. In our view all idle and thoughtless bons vivants will be just the kind of people the poet said were 'like nothing so much as stingless drones'.[5]

CLINIAS: Very apt, that.

ATHENIAN: So we mustn't say that God has precisely the sort of character he himself detests, and we mustn't allow any attempt to maintain such a view.

CLINIAS: Of course not; it would be intolerable.

b ATHENIAN: Take someone who has the special job of looking after some particular sphere of action, and who is preoccupied with his major duties to the neglect of the small. Could we possibly commend him, except for reasons that would ring quite hollow? Let's consider the point in this light: doesn't this sort of conduct—divine or human—fall into two categories?

CLINIAS: Two categories, do we say?

ATHENIAN: *Either* a man thinks it makes no difference to his job as a whole if he neglects the details, *or* important though they are, he nevertheless lives
c in idleness and self-indulgence and neglects them. Or is there some other possible reason for his neglecting them? (Of course, if it is simply *impossible* to look after everything, and a god or some poor mortal fails to take care of something when he has not the strength and therefore the ability, no question of positive neglect of either major or minor duties will arise.)

CLINIAS: No, of course not.

ATHENIAN: Now let our two opponents answer the questions of the three
d of us. They both admit gods exist, but one thinks they can be bought off, the other that they are careless about details. 'First of all, do you both admit that the gods know and see and hear everything, and that nothing within the range of our senses or intellect can escape them? Is this your position, or what?

CLINIAS: 'It is.'

ATHENIAN: 'And also, that they can do anything which is within the power of mortals and immortals?'

CLINIAS: Yes, of course they'll agree to that too.

e ATHENIAN: Further, the five of us have already agreed that the gods are good—supremely so, in fact.

CLINIAS: Emphatically.

ATHENIAN: So surely, given they're the sort of beings we've admitted, it's absolutely impossible to agree that they do anything out of sloth and self-indulgence. Among us mortals, you see, laziness springs from cowardice, and sloth from laziness and self-indulgence.

CLINIAS: That's very true.

ATHENIAN: Then no god neglects anything because of sloth and laziness, because no god, presumably, suffers from cowardice.

CLINIAS: You're quite right.

5. *Works and Days* 304.

ATHENIAN: Now if in fact they do neglect the tiny details of the universe, 902
the remaining possibilities are surely these: *either* they neglect them because they know that no such detail needs their attention, *or*—well, what other explanation could there be, except a lack of knowledge?

CLINIAS: None.

ATHENIAN: So, my dearest sir, are we to interpret you as saying that the gods are ignorant, and display negligence where it is necessary to be solicitous, because they don't *know*? Or alternatively that they realize the necessity, but do what the most wretched of men are said to do, namely fail in their duty because they are somehow overcome by temptation or pain, even though they know that there are better options than the one b
they've in fact chosen?

CLINIAS: Indeed not.

ATHENIAN: Now surely human life has something to do with the world of the soul, and man himself is the most god-fearing of all living creatures, isn't he?

CLINIAS: I dare say.

ATHENIAN: And we regard all mortal creatures as possessions of gods, like the universe as a whole.

CLINIAS: Of course.

ATHENIAN: So whether you argue these possessions count for little or much in the sight of the gods, in neither case would it be proper for our c
owners to neglect us, seeing how very solicitous and good they are. You see, there's another point we ought to consider here.

CLINIAS: What?

ATHENIAN: It's a point about perception and physical strength. Aren't they essentially at opposite poles, so far as ease and difficulty are concerned?

CLINIAS: What do you mean?

ATHENIAN: Although little things are more difficult to see or hear than big, they are much easier, when there are only a few of them, to carry or control or look after.

CLINIAS: Yes, much easier. d

ATHENIAN: Take a doctor who has been given the entire body to treat. Will he ever get good results if he neglects the individual limbs and tiny parts, in spite of being willing and able to look after the major organs?

CLINIAS: No, never.

ATHENIAN: Nor yet will helmsmen or generals or householders, nor 'statesmen' or anybody of that ilk, succeed in major day-to-day matters if they neglect occasional details. You know how even masons say the big e
stones don't lie well without the small ones.

CLINIAS: Of course.

ATHENIAN: So let's not treat God as less skilled than a mortal craftsman, who applies the same expertise to all the jobs in his own line whether they're big or small, and gets more finished and perfect results the better he is at his work. We must not suppose that God, who is supremely wise,

903 and willing and able to superintend the world, looks to major matters but—like a faint-hearted lazybones who throws up his hands at hard work—neglects the minor, which we established were in fact *easier* to look after.

CLINIAS: No sir, we should never entertain such notions about gods. It's a point of view that would be absolutely impious and untrue.

ATHENIAN: Well, it looks to me as if we've given a pretty complete answer to this fellow who's always going on about the negligence of heaven.

CLINIAS: Yes, we have.

b ATHENIAN: At any rate, our thesis has forced him to admit he was wrong. But I still think we need to find a form of words to *charm* him into agreement.

CLINIAS: Well, my friend, what do you suggest?

ATHENIAN: What we say to the young man should serve to convince him of this thesis: 'The supervisor of the universe has arranged everything with an eye to its preservation and excellence, and its individual parts play appropriate active or passive roles according to their various capacities. These parts, down to the smallest details of their active and passive functions, have each been put under the control of ruling powers that have

c perfected the minutest constituents of the universe. Now then, you perverse fellow, one such part—a mere speck that nevertheless constantly contributes to the good of the whole—is you, you who have forgotten that nothing is created except to provide the entire universe with a life of prosperity. You forget that creation is not for your benefit: *you* exist for the sake of the universe. Every doctor, you see, and every skilled craftsman always works for the sake of some end-product as a whole; he handles his materials so that they will give the best results in general, and makes

d the parts contribute to the good of the whole, not vice versa. But you're grumbling because you don't appreciate that your position is best not only for the universe but for you too, thanks to your common origin. And since a soul is allied with different bodies at different times, and perpetually undergoes all sorts of changes, either self-imposed or produced by some other soul, the divine checkers-player has nothing else to do except promote a soul with a promising character to a better situation, and relegate one that is deteriorating to an inferior, as is appropriate in each case, so that

e they all meet the fate they deserve.'

CLINIAS: How do you mean?

ATHENIAN: I fancy I could explain how easy it could be for gods to control the universe. Suppose that in one's constant efforts to serve its interests one were to mold all that is in it by *transforming* everything (by turning fire into water permeated by soul, for instance), instead of producing variety from a basic unity or unity from variety, then after the first or

904 second or third stage of creation everything would be arranged in an infinite number of perpetually changing patterns.[6] But in fact the supervisor of the universe finds his task remarkably easy.

6. Deleting *mē* in e4.

CLINIAS: Again, what do you mean?

ATHENIAN: This. Our King saw (a) that all actions are a function of soul and involve a great deal of virtue and a great deal of vice, (b) that the combination of body and soul, while not an eternal creation like the gods sanctioned by law, is nevertheless indestructible (because living beings could never have been created if one of these two constituent factors had been destroyed), (c) that one of them—the good element in soul—is b
naturally beneficial, while the bad element naturally does harm. Seeing all this he contrived a place for each constituent where it would most easily and effectively ensure the triumph of virtue and the defeat of vice throughout the universe. With this grand purpose in view he has worked out what sort of position, in what regions, should be assigned to a soul to match its changes of character; but he left it to the individual's acts of will to determine the *direction* of these changes. You see, the way we react c
to particular circumstances is almost invariably determined by our desires and our psychological state.

CLINIAS: Likely enough.

ATHENIAN: So all things that contain soul change, the cause of their change lying within themselves, and as they change they move according to the ordinance and law of destiny. Small changes in unimportant aspects of character entail small horizontal changes of position in space, while a substantial decline into injustice sets the soul on the path to the depths of d
the so-called "under"world, which men call "Hades" and similar names, and which haunts and terrifies them both during their lives and when they have been sundered from their bodies. Take a soul that becomes particularly full of vice or virtue as a result of its own acts of will and the powerful influence of social intercourse. If companionship with divine virtue has made it exceptionally divine, it experiences an exceptional change of location, being conducted by a holy path to some superior place elsewhere. Alternatively, opposite characteristics will send it off to live in e
the opposite region. And in spite of your belief that the gods neglect you, my lad, or rather young man,

This is the sentence of the gods that dwell upon Olympus[7]

—to go to join worse souls as you grow worse and better souls as you grow better, and alike in life and all the deaths you suffer to do and be done by according to the standards that birds of a feather naturally apply 905
among themselves. Neither you nor anyone else who has got into trouble will ever be able to run fast enough to boast that he has escaped this sentence—a sentence to which the judges have attached special importance, and which should take every possible care to avoid. Make yourself ever so small and hide in the depths of the earth, or soar high into the sky: this

7. *Odyssey* xix.43.

sentence will be ever at your heels, and either while you're still alive on
b earth or after you've descended into Hades or been taken to some even more remote place, you'll pay the proper penalty of your crimes. You'll find the same is true of those whom you imagine have emerged from misery to happiness because you've seen them rise from a humble position to high estate by acts of impiety, or some similar wickedness. These actions, it seemed to you, were like a mirror which reflected the gods' total lack of concern. But you didn't appreciate how the role of the gods contributes to the total scheme of things. What a bold fellow you must be, if you think
c you've no need of such knowledge! Yet without it no one will ever catch so much as a glimmer of the truth or be able to offer a reasoned account of happiness or misery in life. So if Clinias here and this whole group of old men convince you that you don't really understand what you're saying about the gods, then the divine assistance will be with you. But it may be that you need some further explanation, so if you have any sense you'll
d listen while we address our third opponent.

Now as far as I'm concerned, we've proved, not too inadequately, that gods exist and care for mankind. However, there remains the view that they can be bought off by the gifts of sinners. No one should ever assent to this thesis, and we must fight to the last ditch to refute it.

CLINIAS: Well said. Let's do as you suggest.

ATHENIAN: Look—in the name of the gods themselves!—*how* would they
e be bought off, supposing they ever were? What would they have to be? What sort of being would do this? Well, if they are going to run the entire universe forever, presumably they'll have to be rulers.

CLINIAS: True.

ATHENIAN: Now then, what sort of ruler do the gods in fact resemble? Or rather, what rulers resemble them? Let's compare small instances with great, and see what rulers will serve our purpose. What about drivers of competing teams of horses, or steersmen of boats in a race? Would they be suitable parallels? Or we might compare the gods to commanders of armies. Again, it could be that they're analogous to doctors concerned
906 to defend the body in the war against disease, or to farmers anxiously anticipating the seasons that usually discourage the growth of their crops, or to shepherds. Now since we've agreed among ourselves that the universe is full of many good things and many bad as well, and that the latter outnumber the former, we maintain that the battle we have on our hands is never finished, and demands tremendous vigilance. However, gods and spirits are fighting on our side, the gods and spirits whose chattels we
b are. What ruins us is injustice and senseless aggression; what protects us is justice and sensible moderation—virtues that are part of the spiritual characteristics of the gods, although one can find them quite clearly residing among us too, albeit on a small scale. Now there are some souls living on earth in possession of ill-gotten gains, who in their obviously brutish way throw themselves before the souls of their guardians (whether watch-dogs, shepherds, or masters of the utmost grandeur) and by wheedling words

and winning entreaties try to persuade them of the truth of the line put about by scoundrels—that they have the right to feather their nest with impunity at mankind's expense. But I suppose our view is that this vice c
we've named—acquisitiveness—is what is called 'disease' when it appears in flesh and blood, and 'plague' when brought by the seasons or at intervals of years; while if it occurs in the state and society, the same vice turns up under yet another name: 'injustice'.

CLINIAS: Certainly.

ATHENIAN: Thus anyone who argues that gods are always indulgent to d
the unjust man and the criminal, provided they're given a share in the loot, must in effect be prepared to say that if wolves, for instance, were to give watch-dogs a small part of their prey, the dogs would be appeased by the gift and turn a blind eye to the plundering of the flock. Isn't this what people are really suggesting when they say that gods can be squared?

CLINIAS: It certainly is.

ATHENIAN: So consider all those guardians we instanced a moment ago. Can one compare gods to any of them, without making oneself ridiculous? What about steersmen who are turned from their course 'by libations and e
burnt offerings',[8] and wreck both the ship and its crew?

CLINIAS: Of course not.

ATHENIAN: And presumably they are not to be compared to a charioteer lined up at the starting point who has been bribed by a gift to throw the race and let others win.

CLINIAS: No sir, to describe the gods like that would be a scandalous comparison.

ATHENIAN: Nor, of course, do they stand comparison with generals or doctors or farmers, or herdsmen, or dogs beguiled by wolves.

CLINIAS: What blasphemy! The very idea! 907

ATHENIAN: Now aren't all the gods the most supreme guardians of all, and don't they look after our supreme interests?

CLINIAS: Very much so.

ATHENIAN: So are we really going to say that these guardians of the most valuable interests, distinguished as they are for their personal skill in guarding, are inferior to dogs, or the mere man in the street, who'll never abandon justice, in spite of the gifts that the unjust immorally press upon him?

CLINIAS: Of course not. That's an intolerable thing to say. There's no sort b
of impiety that men won't commit, but anyone who persists in this doctrine bids fair to be condemned—and with every justification—as the worst and most impious of the impious.

ATHENIAN: Can we now say that our three theses—that the gods exist, that they are concerned for us, and that they are absolutely above being corrupted into flouting justice—have been adequately proved?

CLINIAS: Certainly, and we endorse these arguments of yours.

8. *Iliad* ix.500.

c ATHENIAN: Still, I fancy that being so anxious to get the better of these scoundrels, we've put our case rather polemically. But what prompted this desire to come out on top, my dear Clinias, was a fear that the rogues should think that victory in argument was a license to do as they please and act on any and every theological belief they happen to hold. Hence our anxiety to speak with some force. However, if we've made even a small contribution to persuading those fellows to hate themselves and d cherish the opposite kind of character, then this preface of ours to the law of impiety will have been well worth composing.

CLINIAS: Well, there is that hope. But even without those results, the lawgiver will not be at fault for having discussed such a topic.

ATHENIAN: Now then, after the preface we'll have a form of words that convey the purpose of our laws—a general promulgation to all the ungodly that they should abandon their present habits in favor of a life of piety. Then in cases of disobedience the following law of impiety should apply:

e Anyone who comes across a case of impiety of word or deed should go to the aid of the law by alerting the authorities. The first officials to be notified should bring the matter, in due legal form, before the court appointed to try this category of case.

> 58. If an official who hears of the incident fails to perform this duty, *he must* himself be liable to a charge of impiety at the hands of anyone who wishes to champion the cause of the laws.

When verdicts of 'guilty' are returned, the court is to assess a separate penalty for each impious act of each offender. Imprisonment is to apply 908 in all cases. (The state will have three prisons: (1) a public one near the market-place for the general run of offenders, where large numbers may be kept in safe custody, (2) one called the 'reform center', near the place where the Nocturnal Council[9] assembles, and (3) another in the heart of the countryside, in a solitary spot where the terrain is at its wildest; and the title of this prison is somehow to convey the notion of 'punishment'.)

Now since impiety has three causes, which we've already described, b and each is divided into two kinds, there will be six categories of religious offenders worth distinguishing; and the punishment imposed on each should vary in kind and degree. Consider first a complete atheist: he may have a naturally just character and be the sort of person who hates scoundrels, and because of his loathing of injustice is not tempted to commit it; he may flee the unjust and feel fondness for the just. Alterna- c tively, besides believing that all things are 'empty of' gods, he may be a prey to an uncontrollable urge to experience pleasure and avoid pain, and he may have a retentive memory and be capable of shrewd insights. Both these people suffer from a common failing, atheism, but in terms of the harm they do to others the former is much less dangerous than the latter.

9. See 961 ff.

The former will talk with a complete lack of inhibition about gods and sacrifices and oaths, and by poking fun at other people will probably, if he continues unpunished, make converts to his own views. The latter holds the same opinions but has what are called 'natural gifts': full of cunning d
and guile, he's the sort of fellow who'll make a diviner and go in for all sorts of legerdemain; sometimes he'll turn into a dictator or a demagogue or a general, or a plotter in secret rites; and he's the man who invents the tricks of the so-called 'sophists'. So there can be many different types of atheist, but for the purpose of legislation they need to be divided into two e
groups. The dissembling atheist deserves to die for his sins not just once or twice but many times, whereas the other kind needs simply admonition combined with incarceration. The idea that gods take no notice of the world similarly produces two more categories, and the belief that they can be squared another two. So much for our distinctions.

59. (a) Those who have simply fallen victim to foolishness and who do not have a bad character and disposition
should be sent to the reform center by the judge in accordance with the 909
law for a term of not less than five years, and during this period no citizen must come into contact with them except the members of the Nocturnal Council, who should pay visits to admonish them and ensure their spiritual salvation.
(b) When his imprisonment is over, a prisoner who appears to be enjoying mental health should go and live with sensible people; but if appearances turn out to have been deceptive, and he is reconvicted on a similar charge, *he should be* punished by death.

There are others, however, who in addition to not recognizing the existence of gods, or believing they are unconcerned about the world or can be bought off, become subhuman. They take everybody for fools, and many a man they delude during his life; and then by saying after his death that b
they can conjure up his spirit, and by promising to influence the gods through the alleged magic powers of sacrifices and prayers and charms, they try to wreck completely whole homes and states for filthy lucre.

60. If one of these people is found guilty,
the court must sentence him to imprisonment as prescribed by law in the prison in the center of the country; no free man is to visit him at c
any time, and slaves must hand him his ration of food fixed by the Guardians of the Laws. When he dies the body must be cast out over the borders of the state unburied.

61. If any free man lends a hand in burying him,
he must be liable to a charge of impiety at the hands of anyone who cares to prosecute.
If the prisoner leaves children suitable for citizenship, the guardians of orphans must look after them too, from the day of their father's conviction, no less than ordinary orphans. d

All these offenders must be covered by one general law, which by forbidding illegal religious practices will cause most of them to sin less in word and deed against religion, and which in particular will do something to enlighten them. The following comprehensive law should be enacted to deal with all these cases.

No one is to possess a shrine in his own private home. When a man takes it into his head to offer sacrifice, he is to go to the public shrines in order to do so, and he should hand over his offerings to the priests and
e priestesses responsible for consecrating them; then he, and anyone else he may wish to participate, should join in the prayers. The grounds for these stipulations are as follows. To establish gods and temples is not easy; it's a job that needs to be very carefully pondered if it is to be done properly. Yet look at what people usually do—all women in particular, invalids of every sort, men in danger or any kind of distress, or conversely when they have just won a measure of prosperity: they dedicate the first thing that
910 comes to hand, they swear to offer sacrifice, and promise to found shrines for gods and spirits and children of gods. And the terror they feel when they see apparitions, either in dreams or awake—a terror which recurs later when they recollect a whole series of visions—drives them to seek a remedy for each individually, with the result that on open spaces or any other spot where such an incident has occurred they found the altars and shrines that fill every home and village. The law now stated must be observed not only for all these reasons but also in order to deter the impious from managing to conduct these activities too in secret, by establishing shrines
b and altars in private houses, calculating to win the favor of the gods on the quiet by sacrifices and prayers. This would make their wickedness infinitely worse, and bring the reproach of heaven both on themselves and on the virtuous people who tolerate them, so that, by a sort of rough justice, the whole state would catch the infection of their impiety. Still, God won't blame the legislator, because this is the law to be enacted:

c The possession of shrines in private houses is forbidden. If a man is proved to possess and worship at shrines other than the public ones, and the injustice committed is not an act of serious impiety (whether the possessor is a man or a woman), anyone who notices the fact must lay information before the Guardians of the Laws, who should give orders for the removal of the private shrines to public temples.

62. (a) If the culprits disobey,
they must be punished until they carry out the removal.
(b) But if a man is proved guilty of a serious act of impiety typical of an adult, and not just the peccadillo of a child, either by establishing a shrine on private land or by sacrificing on public land to gods not included in the pantheon of the state,
d *he must* be punished by death for sacrificing with impure hands.

The Guardians of the Laws, after deciding whether the crime was a childish peccadillo or not, must then take the matter straight to court, and exact from the culprits the penalty for their impiety.

Book XI

ATHENIAN: The next subject needing to be reduced to due order will be 913
our transactions with each other. I suppose something like this will serve as a general rule. Ideally, no one should touch my property or tamper with it, unless I have given him some sort of permission; and if I am sensible I shall treat the property of others with the same respect.

Let's take as our first example treasure which someone who was not one of my ancestors stored away for himself and his family. I should never pray to the gods to come across such a thing; and if I do, I must not disturb b
it nor tell the diviners, as they are called, who (I shall find) can always invent some reason for advising one to remove something deposited in the ground. The financial benefit I'd get from removing it could never rival what I'd gain by way of virtue and moral rectitude by leaving it alone; by preferring to have justice in my soul rather than money in my pocket, I'd get—treasure for treasure—the better bargain, and for a better part of myself, too.

'Hands off immovables'[1] is aptly applied to a great many situations, and this is one of them. And we should put our trust in the traditional view c
of such conduct—that it injures our descendants. Suppose a man takes no thought for his children and becomes indifferent to the legislator, and removes what neither he himself nor his father nor any of his fathers before him deposited, without the consent of the depositor; suppose he thus undermines the finest law there is, that simple rule of thumb, formulated as it was by a man of great nobility,[2] 'Don't pick up what you didn't put down'—well, when a man treats these *two* legislators[3] so contemptuously d
and picks up something he had not put down (and sometimes no bagatelle, either, but a huge treasure trove), what penalty should he suffer? God knows the penalty of heaven; but the first person to notice such an occurrence in the city should report it to the City-Wardens; if somewhere in the city's market, to the Market-Wardens; and if in some place in the country, he should inform the Country-Wardens and their Chiefs. On 914
receiving the information the state should send to Delphi and in submission to the oracles of the god do whatever he ordains about the objects and the person who removed them. If the informant is a free man, he should acquire a reputation for virtue, but

63. (a) if a free man fails to inform,
he must get a reputation for vice.

If the informant is a slave, then as a reward he will deservedly be presented with freedom by the state, which will give[4] his master what he is worth, but

1. Cf. 842e and note.
2. Solon.
3. Solon and the Magnesian legislator.
4. Reading *apodidousēs* in a8.

(b) if a slave fails to inform,
he must be punished by death.

b The natural thing to do next is to apply this same rule to all objects, important or trivial. If a man leaves some piece of his own property somewhere, deliberately or inadvertently, anyone who finds it should let it be, on the assumption that such things are under the protection of the goddess of the wayside, to whom they are consecrated by law.

64. If in defiance of this rule someone picks up an object of no great value and takes it home, and
(a) he is a slave,
he should be soundly beaten by any passer-by who is not less than thirty years of age;
c (b) if he is a free man,
in addition to being thought ungentlemanly and lawless, he must pay the person who left the article ten times its value.

If one man accuses another of being in possession of some piece of his own property, whether valuable or not, and the accused person admits he has it but denies that it belongs to the complainant, the latter should—if the object has been registered with the authorities according to law—summon the person in possession of it before the authorities, and the
d possessor must produce it; then if on being presented for inspection it proves to have been recorded in the registers as the property of one of the disputants, the owner must take it and depart; but if it belongs to some other party not present, then whichever disputant furnishes a credit-worthy guarantor should exercise the absent party's right of removal and take the article away on his behalf for delivery into his possession. If on the other hand the article in dispute has not been registered with the authorities, it must be left with the three oldest officials pending settlement of the case;
e and if it is an animal that is thus kept in safe custody, the loser of the suit must pay the officials for its keep. The officials are to settle the case within three days.

Anyone who wishes—provided he's in his right mind—may seize his own slave, and (within the permitted limits) treat him as he likes. He may also arrest a runaway slave, in order to stop him escaping, on behalf of a relative or friend. If anyone demands the release of someone who is being taken for a slave and arrested, the captor must let him go, but the releaser must furnish three credit-worthy sureties. On these terms and on no other the man may be released.

65. If a man secures a release except on these conditions, he must be liable to a charge of violence and if convicted,
915 *he must* pay to the captor twice the damages claimed in the suit.

Freedmen too may be arrested if they fail to perform their services to their manumittor, or perform them inadequately. (The services are these: three

times a month a freedman must proceed to the home of his manumittor and offer to do anything lawful and practicable; and as regards marrying he must do whatever his former master thinks right.) He must not grow more wealthy than his manumittor; if he does, the excess must become b
the property of the master. The freedman must not stay in the state longer than twenty years, but like the other aliens[5] he must then take all his property and leave, unless he has gained permission from the authorities and his manumittor to remain. If a freedman or one of the other aliens acquires property in excess of the limit allowed the third property-class,[6] then within thirty days of this event he must pack up and be off, without c
any right to ask the authorities to extend his stay.

66. If a freedman disobeys these regulations and is taken to court and convicted,
he must be punished by death and his property confiscated by the state.

Such cases should be tried in the tribal courts, unless the litigants have previously settled their charges against each other before their neighbors—that is, judges they have chosen themselves.

If a man formally seizes as his own any animal or some other piece of d
property of any other man[7] the person in possession must return it to the warrantor or donor, provided the latter is suable and solvent, or to the person who validly transferred it to him by some other procedure. If he received it from a citizen or a resident alien, he must do so within thirty days; but if he took delivery from a complete alien, he must return it within the five months of which the third shall be the month in which the summer solstice occurs.

When one person makes an exchange with another by buying or selling, the transfer must be made by handing over the article in the appointed part of the market-place (and nowhere else), and by receiving the price e
on the nail; no payment for delivery later or sale on credit is to be allowed. If a man exchanges one thing for another in any other place or under any other arrangement, trusting to the honesty of the other party to the exchange, he must do so on the understanding that when sales are made other than under the rules now stated the law does not permit him to sue. (Anyone may collect contributions to clubs on a friendly basis, but if some disagreement arises over the collection he must do so on the understanding that in this business no one under any circumstances will be allowed to go to law.)

A seller of an article who receives a price of fifty drachmas or more must be obliged to remain in the state for ten days, and the buyer (in view of the complaints that people are apt to make in this connection, and so 916

5. See 850a ff.
6. See 744a ff. and 754d ff.
7. Reading *autou* in d1.

that, if necessary, restitution may be made according to law) must be informed of his address. Here are the rules under which legal restitution may be demanded or refused. If someone sells a slave suffering from consumption or stone or strangury or the so-called 'sacred' disease[8] or some other mental or physical complaint that is chronic and difficult to cure and which the ordinary man could not diagnose, and if the purchase was made by a doctor or trainer, or if the facts were pointed out before the time of sale, the buyer shall have no right to return him to the vendor.
b But if a layman is sold such a slave by a professional, the purchaser may return him within six months, except in the case of the 'sacred' disease, when the period for restitution is to be extended to a year. The case should be heard before a bench of three doctors appointed by joint nomination of the parties, and if the vendor loses he must pay twice the selling price.
c If a layman sells to a layman there should be a right of restitution and a hearing as in the previous instance, but the loser should pay only the simple price. If the slave is a murderer, and both buyer and seller are aware of the fact, there shall be no right of restitution for the purchase; but if the buyer acted in ignorance he shall have a right of restitution as soon as he realizes the situation, and the case should be tried before the five youngest Guardians of the Laws; if the vendor is judged to have known the facts, he must purify the house of the buyer under the Expounders' rules
d and pay him three times the price.

Anyone exchanging money for money or for anything else, animate or inanimate, should always give and receive full value as the law directs. Let's do as we did in other parts of our legislation and allow ourselves a preface dealing with the whole range of crimes that arise in this connection.

Everyone should think of adulteration as essentially the same sort of thing as lying and deceit—which in fact people commonly describe as
e quite respectable. But they are wrong to defend this sort of conduct as 'frequently justified, on appropriate occasions', because what they mean by the 'appropriate' place and occasion they leave vague and indefinite, and their dictum does nothing but harm both to themselves and to others. Now a legislator cannot afford to leave this vague: he must always lay down precise limits, however wide or narrow they may be. So let's define some limits now: a man must tell no lie, commit no deceit, and do no
917 fraud in word or deed when he calls upon the gods, unless he wants to be thoroughly loathed by them—as anyone is who snaps his fingers at them and swears false oaths, or (though they find this less offensive) tells lies in the presence of his superior. Now the 'superiors' of bad men are the good, and of the young their elders (usually)—which means that parents are the superiors of their offspring, men are (of course) the superiors of women and children, and rulers of their subjects. All these people in positions of authority deserve the respect of us all, and the authorities of the state deserve it in particular. This is in fact what prompted these

8. Epilepsy.

remarks. Anyone who is so lacking in respect for men and reverence for b
the gods as to pull off some swindle of the market-place by swearing oaths and calling heaven to witness (even though the rules and warnings of the Market-Wardens stare him in the face), is a liar and a cheat. So in view of the low level of religious purity and holiness most of us generally achieve, let me emphasize what a good habit it is to think twice before taking the names of the gods in vain.

If any cases of disobedience arise, the following law should be invoked: the seller of any article in the market must never name two prices for his c
goods, but only one, and if he doesn't get it, he will (quite rightly) remove his wares without raising or lowering his price that day; and he must not push anything he has for sale, or take an oath on its quality.

67. If a man disobeys these regulations,
any citizen passing by, provided he is not less than thirty years of age, should punish the taker of the oath and beat him with impunity.

68. If the passer-by ignores these instructions and disobeys them,
he must be liable to the reproach of having betrayed the laws.

If a man proves to be beyond persuasion by our present address and sells d
a faulty article, the passer-by who has the knowledge and ability to expose him should prove his case before the authorities, and, if a slave or resident alien, may then take the faulty article for himself; a citizen, however, should dedicate it to the gods of the marketplace.

69. If a citizen fails to expose the offender,
he should be pronounced a rogue, as he has cheated the gods.

70. Anyone discovered selling such adulterated merchandise,
apart from being deprived of it, must be whipped (one lash for every e
drachma of the asking price of the object he was selling), after a herald has announced in the market-place the reason why the culprit is going to be flogged.

The Market-Wardens and the Guardians of the Laws, having ascertained from experts the details of the adulterations and malpractices of sellers, should record in writing rules which specify what vendors must and must not do; these regulations should then be inscribed on a pillar and displayed in front of the Market-Wardens' office for the information of those who 918
transact business in the market-place. (As for the City-Wardens, we have already given an adequate description of their duties, but if it seems some additional rules are needed, the wardens should consult the Guardians of the Laws, write out what they think missing, and record both the new and the old rules of their office on a pillar in front of their quarters.)

Hard on the heels of tricks of adulteration come the practices of retail trade. First we should give a word of advice on the whole subject, then lay down legislation for it. The natural function in the state of retail trading b
in general is not to do harm, but quite the opposite. When goods of any

kind are distributed disproportionately and unequally, anyone who makes the distribution equal and even cannot fail to do good. It needs to be stated that this redistribution, in which money too plays an effective role, is precisely the purpose the trader is meant to serve. Hired laborers, innkeepers and other workmen of varying degrees of respectability all perform
c the function of satisfying the needs of the community by ensuring an even distribution of goods. Why then is trading thought to be such a low and disreputable occupation? Why has it come to be so abused? Let's see if we can discover the reason, so that we can use our legislation to reform at any rate some branches of commerce, even if not the whole institution. This looks like an important task that calls for exceptional resource.

CLINIAS: How do you mean?

ATHENIAN: My dear Clinias, only a small part of mankind—a few highly-
d educated men of rare natural talent—is able to steel itself to moderation when assailed by various needs and desires; given the chance to get a lot of money, it's a rare bird that's sober enough to prefer a modest competence to wealth. Most people's inclinations are at the opposite pole: their demands are always violent demands, and they brush aside the opportunity of modest gain in favor of insatiable profiteering. That's why all branches of retailing, trade and inn-keeping suffer from abuse and extreme unpopular-
e ity. Now here's something I'm determined to mention, ludicrous though it is; it'll never happen, and Heaven help us if it did. But just picture to yourselves some eminently virtuous men forced for a time to go in for inn-keeping or retailing or some similar occupation, or some eminently virtuous women similarly forced by some stroke of fate to take up that kind of life. We'd soon realize how desirable and pleasing each of these trades really is, and if they were carried on according to honest standards we'd value them all as highly as we do our mother or our nurse. But what happens? A man goes off to some remote point on a road running through
919 the middle of nowhere and sets up his establishment to sell provisions; he receives the weary traveler with welcome lodging—peace and quiet for the victim of violent storms, cool refreshment for the sufferer from stifling heat—but then instead of greeting them as friends and offering them in addition to his hospitality some gifts as a token of goodwill, he treats them like so many enemy prisoners that have fallen into his hands, and holds them up to ransom for a monstrously steep and iniquitous sum.
b It's these and similar swindles, which are practiced in all branches of the trade, that have given the occupation of helping the worn-out traveler such a bad name, and in every case the legislator has to find a remedy. The old saying is quite right: it's difficult to fight against two enemies, especially when they are fundamentally different (as with diseases, for instance, and there are a lot of other examples). Our present battle is a case in point: it is a battle against two foes, wealth and poverty—wealth that corrupts our souls by luxury, poverty that drives us by distress into
c losing all sense of shame. So what remedy for this disease will be open to an enlightened community? First, it should keep its trading class as

small as possible; second, trade should be made over to a class of people whose corruption will not harm the state unduly; third, some means must be found to prevent those engaging in such activities from slipping too easily into an utterly shameless and small-minded way of life. d

After these remarks, our law on the subject should run like this, with Heaven's blessing: God is now re-establishing and re-founding Magnesia, and no inhabitant who holds one of the 5040 hearths must ever, willingly or otherwise, become a retailer or a wholesaler, or perform any service whatever for private individuals who are not his equals in status, with the exception of those services that a free man will naturally render to his father and mother and remoter ancestors, and to all free persons older e than himself. Of course, it is not easy to lay down in a law precisely what is consistent with the dignity of a free man and what is not, and the point will have to be determined by those who have won distinctions for their aversion to the latter and devotion to the former. Anyone who by some trick goes in for retail trading in a way forbidden to a gentleman should be indicted by anyone who wishes before a court of judges with a high reputation for virtue, on a charge of disgracing his clan.

71. If he is judged to be sullying his paternal hearth by following an unworthy calling,
he must be imprisoned for a year and so be taught to refrain from such conduct.

72. If he does not then refrain, 920
he must be imprisoned for two years, and the period of imprisonment must be doubled indefinitely on each subsequent conviction.

Now for a second law: anyone who intends to go in for retail trading must be either a resident alien or a temporary visitor. Thirdly, as a third law, such people must behave with as much virtue and as little vice as possible while they share in the life of the state. To that end, the Guardians of the Laws must not simply be regarded as guardians of those whom it is easy to keep from wickedness and crime thanks to their good birth and b education. There are those who do not enjoy such advantages, and need more careful supervision, because they engage in pursuits which are very powerful inducements to vice. So since retail trading is an occupation of great variety and embraces many cognate activities, the Guardians of the Laws must hold a meeting about it, or at any rate about such branches of it as they have concluded are unavoidable and essential to the state, after c the others have been eliminated; and just as we ordered in the case of adulteration—a closely connected matter—experts in each branch should be in attendance. The meeting must see what ratio of expenditure to receipts will give the retailer a decent profit, and the ratio arrived at must be recorded in writing, put on display, and then imposed on the various traders by the Market-Wardens, City-Wardens and Country-Wardens.

Perhaps thus retail trade will benefit the population at large and do minimum harm to those members of society who engage in it.

d If a man fails to fulfill an agreed contract—unless he had contracted to do something forbidden by law or decree, or gave his consent under some iniquitous pressure, or was involuntarily prevented from fulfilling his contract because of some unlooked-for accident—an action for such an unfulfilled agreement should be brought in the tribal courts, if the parties have not previously been able to reconcile their differences before arbitrators (their neighbors, that is).

The class of craftsmen who have enriched our lives by their arts and skills will have Athena and Hephaestus as its patrons, while Ares and
e Athena will be patrons of those who protect the products of these craftsmen by skills of a different order—the techniques of defense. (The consecration of this latter class to these gods is perfectly justified, in that both classes are in the continuous service of land and people, the latter by taking the lead in the struggles of war, the former by producing tools and goods in return for pay.) So if they respect their divine ancestors, they will think it a disgrace to break their word in a professional matter.

921 73. If one of the craftsmen culpably fails to complete his work within the stipulated time, out of disrespect for the god from whom he wins his bread, fondly thinking that he can count on the indulgence of the divinity with whom he has some personal relationship,
(a) *first he* will pay a penalty to the god,
(b) *and secondly,* under the provisions of the law applicable to his case, he must owe the price of the works of which he has cheated his employer, and perform his task all over again within the stipulated period, free of charge.

And the law will give the contractor for a work the same advice as it gave
b a seller, not to take advantage by setting too high a price on his services, but to name their actual value without further ado. The contractor has precisely the same duty, because as a craftsman he knows what the job is worth. In a state of gentlemen a workman must never use his craft, which is at bottom accurate and straightforward, to take 'craft' advantage of laymen, and anyone who is thus imposed upon shall be able to sue the culprit. But if anyone lets a contract to a workman and fails to pay him
c the price stipulated in a valid legal agreement, and snaps his fingers at those partners in our social framework, Zeus the patron of the state, and Athena, so that his delight at being in pocket wrecks the fundamental bonds of society, then the following law, with the backing of the gods, must reinforce the cohesion of the state:

74. (a) If a man takes delivery of a piece of work and fails to pay for it within the agreed time,
he must be charged double;
(b) if a whole year elapses,

then notwithstanding the rule that loans in general do not bear interest, he must pay an obol per drachma[9] for every month in arrear. d

Actions in these cases should be brought before the tribal courts.

Now that we have broached the subject of craftsmen in general, we ought in all fairness to glance at those whose job it is to keep us safe in war, such as generals and other experts in military techniques. These persons are just as much craftsmen as ordinary workmen, though of a different kind, so when one of them undertakes some public task, voluntarily or under orders, and performs it well, the law will never tire of praising anyone who pays him the honor he deserves—honor being in effect a e military man's pay. But if anyone receives the benefit of some splendid military action and fails to pay that price, the law will censure him. For the benefit of the military, then, let us enact following regulation-cum-commendation, by way of advising rather than compelling the people at large. Those fine men who safeguard the whole state either by exploits of 922 valor or by military expertise must be accorded honor—but honor of the second rank, because the highest honor should be given first and foremost to those who have proved conspicuously conscientious in respecting the written regulations of the good legislator.

ATHENIAN: We've now pretty well completed our provisions for the most important agreements that men make with each other, with the exception of those relating to orphans and the care and attention due to them from their guardians. So now we've more or less provided for the first topic, here's the next thing on which we are obliged to impose some sort of b order. All our regulations must start from two basic facts: (a) people at the point of death like to settle their affairs by a will, (b) sometimes, by chance, they die intestate. What a difficult and contentious business it is, Clinias! That's what I had in mind when I said we were 'obliged' to deal with it: to leave it unregulated is quite out of the question. If you allow a will unchallengeable validity whatever condition a man near the end of c his life may have been in when he drew it up, he might make any number of mutually inconsistent provisions that contradicted not only the spirit of the laws but also the inclinations of those who survive him, and indeed his own earlier intentions before he set out to make his will. After all, most of us, when we think death is at hand, just go to pieces and can't think straight.

CLINIAS: How do you mean, sir?

ATHENIAN: When a man is about to die, Clinias, he becomes refractory, and keeps harping on a principle that spreads alarm and despondency among legislators.

CLINIAS: How's that?

9. I.e., 200 per cent per annum (6 obols = 1 drachma). Cf. 742c for the rule that loans do not bear interest.

ATHENIAN: In his anxiety for complete authority he's apt to express
d himself with some warmth.

CLINIAS: To what effect?

ATHENIAN: 'Ye gods!' says he, 'it's a fine thing if I'm not going to be allowed to give—or not give—my own property to anyone I please! Why shouldn't I give more to one man and less to another depending on whether they have shown themselves good or bad friends to me? My illnesses, my old age and all my other various misfortunes have sorted them out well enough.'

CLINIAS: Well, sir, don't you think that's well said?

e ATHENIAN: Clinias, my view is that the ancient lawgivers were too easy-going, and legislated on the basis of a superficial and inadequate appreciation of the human condition.

CLINIAS: How do you mean?

ATHENIAN: My dear fellow, because they feared the line of argument I have mentioned, they passed the law allowing a man to dispose of his
923 own property in his will exactly as he pleases. But when people have come to death's door in your state, you and I will make a rather more appropriate response:

'Friends, you "creatures of a day" in more senses than one, it's difficult for you in your present circumstances to know the truth about your own property and also "know yourselves," as the Delphic inscription puts it. Therefore, I, as legislator, rule that neither you nor this property of yours
b belongs to yourselves, but to your whole clan, ancestors and descendants alike; and your clan and its property in turn belong, even more absolutely, to the state. That being so, I should be reluctant to tolerate someone worming himself into your good graces when you are smitten with illness or old age, and wheedling you into making a will that is not for the best. I shall legislate with a view to nothing except the interest of your clan and the entire state, relegating (as is only right) that of the individual to second place. So as you go on your journey, which is the way of all flesh, show restraint and goodwill towards us: we will look after your affairs for the future and guard your interests with the utmost care, down to the
c smallest detail.'

Let that stand by way of preamble and consolation for both the living and the dying, Clinias. Here's the actual law:

Anyone who settles his property by writing a will should first, if he has had children, write down the name of that son who in his opinion deserves to be his heir, and he should also record precisely which, if any, of his other children he offers for adoption by someone else. If, however, he is still
d left with one of his sons not adopted into an estate, who will presumably be dispatched by law to a colony,[10] the father should be permitted to present him with as much of his property as he likes, apart from the family estate and all its associated equipment; and if there is more than one son in that

10. Cf. 740e.

position, his father is to distribute his property among them—excluding the estate—in whatever proportion he pleases. But he should not distribute any part of his property to any son who has a home. He should treat a daughter analogously: if she is promised in marriage, he should not let e
her share his goods, but only if she is not promised. If subsequent to the will one of the sons or daughters is discovered to have come into possession of an estate in Magnesia, he or she should abandon his or her legacy to the testator's heir. If the testator is leaving no male offspring but only female, he should select whichever of his daughters he pleases and in his will provide someone to be a husband for her and a son for himself, and record this person as his heir. And here's another disaster a man should allow for when drawing up his will: if his son (his own or adopted) dies in infancy before he can reach man's estate, the will should specify in writing a child who is to take his place—and who, one hopes, will have 924
better luck. When a man who has no children at all writes a will, he may reserve one tenth of his acquired property and give it to anyone he wishes; all the rest he should leave to his adopted heir, so that in making him his son with the blessing of the law he gains his goodwill by treating him fairly. When a man's children need guardians, and the deceased has made a will and stated in writing the number of guardians he wants his children to have and who they should be (provided they are ready and willing to undertake the office), the choice of guardians put on record in this way b
should be binding. But if a man dies absolutely intestate or without selecting guardians, then the two nearest relatives on the father's side and the two nearest on the mother's, together with one of the deceased's friends, must be authorized to act as guardians; and the Guardians of the Laws should appoint them for any orphan who stands in such need. Everything to do with guardianship and orphans should be the concern of the fifteen eldest Guardians of the Laws, who should divide themselves by seniority c
into groups of three, one group to act one year and another the next, until the five terms of office have been completed in rotation; and so far as possible there should be no gaps in the sequence.

When a man dies absolutely intestate and leaves children in need of guardians, these same laws must be brought into operation to relieve their distress. But if he meets with some unforeseen accident and leaves just daughters, he must forgive the lawgiver if he arranges the giving of them d
in marriage with an eye on only two out of three possible considerations: close kinship, and the security of the estate. The third point, which a father would have taken into account—namely to select from among the entire citizen body someone whose character and habits qualify him to be his own son and his daughter's bridegroom—these considerations, I say, will have to be passed over, because it's impracticable to weigh them. So here's e
how the best law we can manage in such a field should run. If a man fails to make a will, and leaves only daughters, then on his death (a) a brother on his father's side (or, if without an estate of his own, a brother on his mother's side) should take the daughter and the estate of the deceased.

(b) If there is a brother's son available, but no brother, then if the parties are of a similar age the same procedure is to apply. In the absence of all these, (c) a sister's son is to benefit under the same regulations. (d) Next in line is to be the brother of the deceased's father, next (e) that brother's son, and finally (f) the son of the sister of the deceased's father. And in all cases where a man leaves only female offspring, the succession is to
925 pass through the family according to the same rules of kinship, through brothers and brothers' and sisters' sons, the males in any one generation always taking precedence over the females. As for age, the assessor must determine the propriety or otherwise of the marriage by inspection, viewing the males naked and the females stripped down to the navel. If the family suffers from such a dearth of relatives that not even a grandson either of the deceased's brother or of the son of the deceased's grandfather exists, then in consultation with her guardians the girl may single out of her own free choice any other citizen, provided he does not object, who
b should then become the deceased's heir and the daughter's bridegroom. However, 'flexibility above all': sometimes suitable candidates from within the state itself may be in unusually short supply, so if a girl is hard put to it to find a husband among her compatriots, and has in view someone who has been dispatched to a colony whom she would like to inherit her father's property, then if the man is related to her, he should enter into the estate under the provisions of the law; if he is not of her clan, then provided there are no near kin living in the state, he shall be entitled by
c virtue of the choice of the daughter of the deceased and that of her guardians to marry her and return to his homeland to take over the establishment of the intestate father.

When a man dies intestate and leaves neither male nor female issue, the situation should in general be met by the foregoing law, and a man and a woman from the clan should 'go in harness' and enter into the deserted establishment with full title to the estate. The order of precedence
d on the female side is to be: (a) the deceased's sister, (b) his brother's daughter, (c) the sister's son, (d) the sister of the deceased's father, (e) the daughter of the father's brother, and (f) the daughter of the father's sister. A woman from this list should set up home with a man from the other list according to the degrees of kinship and the demands of religion[11] for which we made provision earlier.

But let's not forget the severity of such laws. It can sometimes be hard for a near relative of the deceased to be instructed to marry his kinswoman, by a law that to all appearances takes no account of the thousands of social
e difficulties that deter people from obeying such instructions in a willing spirit, so that they invariably prefer to put up with anything rather than comply—I mean difficulties like physical or mental illnesses or defects in the man or woman one is told to marry. I dare say some people imagine the lawgiver is not bothered about these things at all, but they're wrong.

11. See 741a–e.

So in the interests of the lawgiver and those for whom he legislates, let's compose a sort of impartial preamble begging those who are subject to the legislator's orders to forgive him if in his concern for the common good he finds it hardly possible to cope with the personal inconvenience 926
experienced by individuals; and the people for whom the lawgiver's regulations are intended should also be forgiven for their occasional understandable inability to carry out the orders which, in all ignorance, he gives them.

CLINIAS: Well then, sir, what would be the most reasonable way of dealing with such cases?

ATHENIAN: It is essential, Clinias, to choose people to arbitrate between laws of that sort and the persons affected by their provisions.

CLINIAS: How do you mean?

ATHENIAN: Sometimes a nephew with a wealthy father might be reluctant to take his uncle's daughter because he fancies his chances and is bent on b
making a better marriage; in another case a man would have no choice but to disobey the law because the instructions devised by the lawgiver would lead to untold trouble—as for instance if they tried to compel him to marry someone suffering from lunacy or some other terrible physical or mental defect that would make the life of the partner not worth living. This policy should be embodied in a law with the following provisions:

If in practice people attack the established laws about wills on any point c
whatever, but especially where a marriage is concerned, and swear that if the legislator were alive and present in person he would never have forced them to either of the courses to which they are in fact being forced (to marry this man or that woman), but one of the relatives or a guardian takes the opposite line, then we must remember that the fifteen Guardians of the Laws have been bequeathed to orphan boys and girls by the legislator to act as their fathers and arbitrate on their behalf; so litigants on any of these matters must go to them to get disputes settled, and carry out their d
decisions as binding. But if a litigant believes that this is too great an authority to be vested in the Guardians of the Laws, he should take them before the court of the Select Judges and get a decision on the points at issue.

75. If he loses the day,
the lawgiver should visit him with censure and disgrace, a punishment which any sensible person will regard as more severe than a huge fine.

The effect of this will be to give our orphan children a sort of second birth. e
We have already described the training and education they should all receive after their first; after this second and parentless birth we have to see that these children who have had the ill luck to be bereaved and made orphans are to be pitied as little as possible for their misfortune. In the first place, the Guardians of the Laws—substitute parents at least as good as the original ones—should lay down rules for them; in particular, we instruct the three Guardians on duty for the year to look after them as though they were their own children; and for the guidance of these officials and the guardians we shall compose a suitable preamble on the education

927 of orphans. And luckily enough, I fancy, we have described already how after death the souls of the departed enjoy certain powers which they use to take an interest in human affairs.[12] The stories which tell of these things are true, but long, so one should trust to the ancient and widely disseminated common traditions on the point, and also take the legislator's word for it that the doctrine is true—unless, of course, one believes them to be arrant fools. Now if this is really the way of things, a guardian should
b fear, in the first place, the gods above, who are aware how deprived orphans are, and secondly the souls of the departed, whose natural instinct is to watch with particular care over their own children, showing benevolence to people who respect them and hostility to those who treat them badly. And he should also fear the reactions of those who, full of years and honor, are still living, because in a state which thrives under good
c laws their grandchildren will show them glad and tender affection, and old men have sharp eyes and ears for such things: if you do the right thing by an orphan, they'll be kind to you, whereas they'll soon show you their displeasure if you take advantage of an orphan's exposed position, because they regard orphans as a supreme and sacred trust. A guardian or official with even the slightest sense has a duty to give close attention to all these warnings, and take great care over the training and education of orphans, helping them in every possible way, just as if he were contributing to the good of his own self and family.

A man who complies with the preface to the law and refrains from any ill-treatment of an orphan will be spared first-hand experience of the
d legislator's fury against such actions, but

> 76. if a man refuses to comply, and harms a child deprived of its father or mother,
> *he must* pay double the damages that he would have to pay for a crime committed against a child with both parents living.

But do we really *need* precise rules to control a guardian's treatment of an orphan, and an official's supervision of a guardian? They already possess a pattern of how to bring up free-born children, in the education they themselves give up their own, and in the way they manage their private
e possessions—and of course the rules they have to guide them on those matters are pretty exact. If they were not, it would be reasonable to lay down rules of guardianship as a special and separate category, and make an orphan's life different from that of ordinary children by working out a detailed régime of its own. But in fact in our state being an orphan doesn't differ very much from living under one's own father, although in
928 public esteem, and the amount of attention the children get, orphanhood is usually much less desirable. That is why in dealing with this topic—rules about orphans—the law has gone to such lengths in encouraging

12. See 865d–e.

and threatening. And here's the sort of threat that will come in very handy indeed. Anyone acting as a guardian of a boy or girl, and any Guardian of the Laws who supervises that guardian by virtue of being appointed to control him, must show this child who has had the misfortune of bereavement no less affection than his own children, and be just as zealously concerned for his ward's property as he is for his own—more so, in fact; and everyone who acts as a guardian will have just that one law to observe b
on the subject of orphans. But

77. if this law is contravened in such respects,
(a) *a guardian* should be punished by his official,
(b) *an official* should be summoned before the court of Select Judges by the guardian and punished by a fine of twice the damages as estimated by the court.

If a guardian is suspected by the relatives or indeed by any other citizen of neglect or malpractice, he should be summoned before the same court.

78. *He must* be fined four times the sum he is found to have taken, half c
the fine going to the child and half to the successful prosecutor.

If once he has grown up an orphan concludes that he was badly treated by his guardian, he may bring a suit for incompetent guardianship, provided he does so within five years of its expiry.

79. (a) If a guardian is found guilty,
the court is to estimate what he is to suffer or pay;
(b) if an official is found guilty of injuring the orphan
(i) through negligence,
the court must assess how much he is to pay to the child; d
(ii) by criminal conduct,
then in addition to paying the sum assessed, he must be ejected from the office of Guardian of the Laws,

and the government must supply the state and country with a fresh Guardian of the Laws to take his place.

The bitterness with which fathers quarrel with their children and children with their fathers is often excessive. A father is apt to think that the legislator ought to give him legal authority, if he wishes, to make a public proclamation through a herald that under the provisions of the law his e
son is his son no longer; for their part, sons believe that if they have a father whose suffering from disease or old age has become a disgrace, they are entitled to prosecute him on a charge of lunacy. Such disputes are usually found where men's characters are irredeemably corrupt, because when the corruption is confined to one party—as when the son is corrupt but not the father, or the other way round—the bad feeling is not sufficient to lead to trouble. Now in any other state a child repudiated by his father would not necessarily find himself a stateless person, but in the case of Magnesia, to which these laws will apply, a man disowned by his

929 father will be obliged to migrate to another country, because the 5040 homes cannot be increased even by one. Consequently before this punishment can be legally inflicted on him, he must be repudiated not only by his father but by the entire clan. Procedure in such cases is to be governed by some such law as this: anyone who has the extreme misfortune to want—justifiably or not—to expel from the clan the child he has fathered and reared, must not be allowed to do so casually and on the spur of the
b moment. First of all he must assemble all the relatives on his own side and all the relatives of the son on the mother's side, as far as cousins in each case, and accuse his son before them, explaining why he deserves to be drummed out of the clan by its united action. The son shall have the right of reply, to argue that none of these penalties is called for. If the father carries his point, and wins the vote of more than half the relatives
c (he himself and the mother and the accused son being excluded from the voting, as well as those males and females who are not yet of adult age), then by this procedure and on these terms he shall be entitled to repudiate his son, but in no other way whatever. If some other citizen wishes to adopt the repudiated son, no law is to stop him (a young man's character is by nature bound to change frequently enough in the course of his life), but if after ten years no one has been moved to adopt the disowned person,
d the supervisors of surplus children intended for the colony[13] must take him too under their wing so that he may be suitably established in the same colony as the others.

Now suppose illness or old age or a cantankerous temper or all three make a man more wayward than old men usually are, unbeknown to all except his immediate circle; and suppose he squanders the family resources on the grounds that he can do as he likes with his own property, so that his son is driven to distraction but hesitates to bring a charge of lunacy.
e This is the law the son must observe. First of all he must go to the eldest Guardians of the Laws and explain his father's misfortune, and they, after due investigation, must advise him whether to bring the charge or not. If they advise that he should, they must come forward as witnesses for the prosecution and plead on his behalf.

80. If the case is proved,
the father must lose all authority to manage his own affairs, even in trivialities, and be treated like a child for the rest of his days.

Whenever a man and his wife find it impossible to get on with each other because of an unfortunate incompatibility of temperament, the case must
930 come under the control of ten men—middle-aged Guardians of the Laws—and ten of the women in charge of marriage, of the same age. Any arrangements they make which reconcile the couple should stand, but if feelings are too exacerbated for that they must do their best to find each some

13. Cf. 740e.

other congenial partner. It's quite likely that the existing partners are people of rough temper, so one should try to fit them in harness with mates of a more phlegmatic and gentle disposition. And when the quarreling couple have no children or only a few, the procreation of children must be kept in view in the setting up of the new homes; where sufficient children b
already exist, the divorce and the remarriages should facilitate companionship and mutual help in the evening of life.

If a wife dies and leaves male and female children, we'll lay down a law advising, though not compelling, the husband to bring up his existing children without importing a stepmother; but if there are no children, he must be obliged to remarry so as to beget sufficient children for his home and for the state. If the husband dies, leaving an adequate number of c
children, their mother should remain in her position and bring them up; but if it is judged that she is too young to live unmarried without injuring her health, her relatives should report the facts to the women in charge of marriages and do whatever seems advisable to both sides; and if there have been no children born as yet, they should bear that in mind too. (The minimum acceptable number of children is to be fixed by law as one of each sex.) d

Whenever there is no dispute about the parentage of a child, but a ruling is required as to which parent it should follow, the offspring of intercourse between a slave woman and a slave or a free man or a freedman should become the absolute property of the woman's owner; if a free woman has intercourse with a slave, the issue should belong to his master. If a free man has a child by his own slave woman, or a free woman by her own slave, and the facts are crystal clear, the female officials are to send the e
free woman's child along with its father to another country, and the Guardians of the Laws must similarly send away the free man's child with its mother.

No god or any man with his wits about him will ever advise anyone to neglect his parents. On the contrary, we should be quick to appreciate how very relevant the following preface on the subject of worshipping gods will be to the respect or disrespect in which we hold our father and mother.

Time-honored cult observances all over the world fall into two categories. Man exalts some of the gods because he can see them with his own eyes, 931
others he represents, by setting up statues of them, and believes that his worship of these inanimate 'gods' ensures him the abundant gratitude and benevolence of their real and living counterparts. This means that no one who has living in his house his father or mother, or their mothers and fathers, treasures old and frail, must ever forget that so long as he possesses such a 'shrine' at his hearth and looks after it properly, no other objects of worship will ever do him as much good.

CLINIAS: What do you mean by 'properly'? b

ATHENIAN: I'll tell you. After all, my friends, such themes are worth a hearing.

CLINIAS: Tell us, then.

ATHENIAN: Our version of the story of Oedipus is that when he was insulted by his sons he called down a curse on them—and you know how people have never stopped relating how the gods heard and answered his prayer. And Amyntor fell into a rage with his son Phoenix and cursed him; Theseus did the same to Hippolytus, and there are thousands of
c similar cases, which all go to show that the gods take the parents' side against the children: no man, you'll find, can curse anyone as effectively as a parent can curse his child; and that's absolutely right. So if it is true that the gods listen to the prayers of fathers or mothers who have been wantonly insulted by their children, isn't it reasonable to suppose that when by contrast the respect we show our parents delights them so much that they pray hard to heaven for a blessing on their children, the gods will be just as ready to listen as before, and grant us it? If not, they'd be conferring blessings unjustly—which we maintain is a peculiarly inappro-
d priate thing for a god to do.

CLINIAS: Very much so.

ATHENIAN: So as we said just now, we must reckon that the most precious object of worship a man can have is his father or grandfather, weak with age, or his mother in a similar condition, because when he honors and respects them God is delighted—if he weren't, he wouldn't listen to their prayers. These 'living shrines', in the shape of our forefathers, affect us
e far more wonderfully than lifeless ones, because when we look after them they invariably join their prayers to ours, whereas if we insult them, they oppose us. As ordinary statues do neither of these things, a man who treats his father and grandfather and so on as they deserve will have objects of worship that are much more effective than any others in winning him the favor of heaven.

CLINIAS: Excellently put.

ATHENIAN: Anyone with his wits about him holds the prayers of his parents in fear and respect, knowing that the cases in which such prayers have been brought to pass have been many and frequent. This being the
932 way of things, a good man will regard his elderly forebears as a veritable god-send, right up till they breathe their last; and when they pass on, they will be sorely missed by the next generation,[14] and be a terror to the wicked. Let everyone be convinced by this argument and do their parents all the honor enjoined by law.

But if even so a man gets the reputation of being deaf to such prefaces, then the right law to pass to deal with him will run as follows.

b If anyone in this state of ours looks after his parents less diligently than he should and fails to carry out their wishes in all respects with more indulgence than he shows to those of his sons and descendants in general, and indeed to his own desires too, the neglected parent must report the fact, either in person or by messenger, to the three most senior Guardians

14. Reading *neois* in a3.

of the Laws and three of the women in charge of marriages. These officials must take the matter in hand, and provided the offender is still a young man under the age of thirty, chastise him with a whipping and imprisonment. (In c
the case of a woman, the same chastisement may be inflicted until she is forty.) Older persons, if they persist in neglecting (and perhaps actually ill-treating) their parents, should be summoned before a court consisting of the 101 most elderly citizens of the state.

81. If a man is found guilty,
the court is to assess what penalty or fine is to be exacted, and absolutely no fine or penalty that a man can pay must be excluded from consideration.

If ill-treatment prevents a parent from complaining, any free man who d
discovers the situation should alert the authorities.

82. If he does not,
he must be regarded as a scoundrel and be liable to a suit for damage at the hands of anyone who wishes.

If the informant is a slave, he should be given his freedom; if he belongs to the criminal or his victim, he must be released by the authorities; and if he belongs to some other citizen, the public treasury is to see that the owner is reimbursed. Official action must be taken to stop anyone injuring him in revenge for giving information.

We have already dealt with *fatal* injuries inflicted by the use of drugs, e
but we have not yet discussed any of the less harmful cases of voluntary and premeditated injury, inflicted by giving food or drink or by applying ointments. Full treatment of the question is hindered by the fact that so far as human beings are concerned, poisoning is of two kinds. First there is the sort we have just explicitly mentioned: the injury a body suffers from some physical substance by natural processes. The other kind is a 933
matter of spells and charms and 'enchantments': not only are the victims persuaded that they are being seriously injured by people with magic influence, but even the perpetrators themselves are convinced that it really is in their power to inflict injury by these methods. It is not easy to know the truth about these and similar practices, and even if one were to find out, it would be difficult to convince others; and it is just not worth the b
effort to try to persuade people whose heads are full of mutual suspicion, that even if they do sometimes catch sight of a molded waxen figure in a doorway or at a junction of three roads or on their parents' grave, they should ignore it every time, because they cannot be sure these things work. All this means that our law about drugs must be a double law, reflecting the two methods by which poisoning may be attempted. But first, by c
entreaty, exhortation and advice, we'll explain that no such thing should ever be attempted, that one should not alarm and terrify the common man, like an impressionable child, and that legislators and judges should not be put to the necessity of curing men of such fears. We shall point out for

a start that unless the person who tries to use poison happens to be a diviner or soothsayer, he acts in ignorance of how his spells will turn out, and unless he happens to be an expert in medicine, he acts in ignorance of the effect he will have on the body. So the wording of our law about
d the use of poisons should be as follows:

> 83. (a) If a doctor poisons a man without doing either him or any member of his household fatal injury, or injures his cattle or bees (fatally or otherwise), and is found guilty on a charge of poisoning,
> *he must be punished* by death.
> (b) If the culprit is a layman,
> *the court* is to decide the proper penalty or fine to be inflicted in his case.
>
> 84. (a) If a diviner or soothsayer is deemed to be in effect injuring
> e someone, by spells or incantations or charms or any other poison of that kind whatever,[15]
> *he must die.*
> (b) If someone with no knowledge of divination is found guilty of this kind of poisoning,[16]
> *the same* procedure is to be followed as with the other laymen [83.(b)]—that is, the court is to decide what it thinks is the appropriate penalty or fine for him to pay.

When one man harms another by theft or violence and the damage is extensive, the indemnity he pays to the injured party should be large, but smaller if the damage is comparatively trivial. The cardinal rule should be that in every case the sum is to vary in proportion to the damage done, so that the loss is made good. And each offender is to pay an additional
934 penalty appropriate to his crime, to encourage him to reform. Thus if a man has been led to do wrong by the folly of someone else, being over-persuaded because of his youth or some similar reason, his penalty should tend to be light; but it is to be heavier when his offense is due to his own folly and inability to control his feelings of pleasure and pain—as when he has fallen victim to cowardice and fear, or some deep-rooted jealousy or lust or fury. This additional penalty is to be inflicted not because of the crime (what's done can't be undone), but for the sake of the future: we
b hope that the offender himself and those that observe his punishment will either be brought to loathe injustice unreservedly or at any rate recover appreciably from this disastrous disease. All these reasons and considerations make it necessary for the law to aim, like a good archer, at a penalty that will both reflect the magnitude of the crime and fully indemnify the victim. The judge has the same aim, and when he is faced by his legal duty of assessing what penalty or fine the defendant must pay, he must
c follow closely in the legislator's footsteps; and the latter must turn himself

15. Reading *haistisinoun* in e1.

16. Reading *ōn tēs* in e3.

into a sort of artist and sketch some specimen measures consistent with his written prescriptions. That, Clinias and Megillus, is the job to which we must now devote our best efforts; we have to describe what type of penalty is called for in all categories of theft and violence—granted, of course, that the gods and children of gods are prepared to see us legislate in this field.

Lunatics must not be allowed to appear in public; their relations must keep them in custody in private houses by whatever means they can improvise. d

85. If they fail to do so,
they must pay a fine: one hundred drachmas for a member of the highest property-class (whether it is a slave or a free man that he fails to keep an eye on), eighty for a member of the second class, sixty for the third, and forty for the lowest.

There are several kinds of madness, brought on by several causes. The cases we have just mentioned are the result of illness, but there are some people with an unfortunate natural irritability, made worse by poor discipline, who in any trivial quarrel will shout their heads off in mutual abuse. Such a thing is highly improper in a well-run state. So this single law e
should apply to all cases of defamation: no one is to defame anybody. If you are having an argument you should listen to your opponent's case, and put your own to him and the audience, without making any defamatory remarks at all. When men take to damning and cursing each other and to calling one another rude names in the shrill tones of women, these 935
mere words, empty though they are, soon lead to real hatreds and quarrels of the most serious kind. In gratifying his ugly emotion, anger, and in thus disgracefully stoking the fires of his fury, the speaker drives back into primitive savagery a side of his character that was once civilized by education, and such a splenetic life makes him no better than a wild beast; bitter indeed, he finds, are the pleasures of anger. Besides, on such occasions all men are usually quick to resort to ridicule of their opponents, and no one who has indulged that habit has ever acquired the slightest sense of b
responsibility or remained faithful to many of his principles. That is why no one must ever breathe a word of ridicule in a temple or at a public sacrifice or at the games or in the marketplace or in court or in any public gathering, and the relevant official must always punish such offenses.

86. If he fails to do so,
he must be disqualified from competing for awards of merit, as being a c
man who disregards the laws and fails to perform the duties imposed upon him by the legislator.

87. If in other localities someone fails to refrain from abusive language, whether he resorts to it first or by way of reply,
the passer-by, provided he is older than the offender, should lend his

support to the law and eject by force this fellow who has shown such indulgence to anger, that bad companion.

88. If the passer-by fails to do so,
he must be liable to the appointed penalty.

The view we are putting forward now is that when a man is embroiled in a slanging-match he is incapable of carrying on the dispute without
d trying to make funny remarks, and when such conduct is motivated by anger we censure it. Well then, what does this imply? That we are prepared to tolerate a comedian's eagerness to raise a laugh against people, provided that when he sets about ridiculing our citizens in his comedies, he is not inspired by anger? Or shall we divide comedy into two kinds, according to whether it is *good-natured* or not? Then we could allow the playful
e comedian to joke about something, without anger, but forbid, as we've indicated, anyone whatever to do so if he is in deadly earnest and shows animosity. We must certainly insist on this stipulation about anger; but we still have to lay down by law who ought to receive permission for ridicule and who not. No composer of comedies, or of songs or iambic verse, must ever be allowed to ridicule either by description or by impersonation any citizen whatever, with or without rancor. Anyone who disobeys this rule must be ejected from the country that same day by the presidents of the games.

936 89. If the latter fail to take this action,
they must be fined three hundred drachmas, to be dedicated to the god in whose honor the festival is being held.

Those who have earlier[17] been licensed to compose verse against each other should be allowed to poke fun at people, not in savage earnest, but in a playful spirit and without rancor. The distinction between the two kinds must be left to the minister with overall responsibility for the education of the young; an author may put before the public anything the minister approves of, but if it is censored, the author must not perform it to anyone
b personally nor be found to have trained someone else to do so, whether a free man or a slave.

90. If he does,
he must get the reputation of being a scoundrel and an enemy of the laws.

It is not the starving tout court or the similarly afflicted who deserve sympathy, but the man who in spite of his moderation or some other virtue or progress towards it, nevertheless experiences some misfortune. That being so, it will be a matter for surprise if a virtuous person, whether slave or free, even if the state and society he lives in is run with only average skill, is ever so grossly neglected as to be reduced to abject poverty.

17. See 816e.

So the legislator will be quite safe if he lays down a law running more or less like this. No one is to go begging in the state. Anyone who attempts c
to do so, and scrounges a living by never-ending importunities, must be expelled from the market by the Market-Wardens, from the city by the City-Wardens, and from the surrounding country conducted by the Country-Wardens across the border, so that the land may rid itself completely of such a creature.

If a slave man or woman damages any piece of someone else's property, then provided the person who suffers the loss was not himself partly to d
blame because of inexperience or careless conduct, the slave's owner must either make good the damage in full, or hand over the actual offender. But if the owner counter-claims that the prosecution has been brought as a result of the injured person and the culprit putting their heads together to rob him of his slave, he must sue the allegedly injured party on a charge of collusion. If he wins the day, he is to receive twice the value of the e
slave as assessed by the court.

91. If he loses,
he must both make good the damage and hand over the slave.

92. If a beast of burden or a horse or dog or some other animal damages a piece of a neighbor's property,
its owner is to pay for the damage on the same basis.

If anyone deliberately refuses to appear as a witness, the person who needs his evidence must serve a summons on him; and on being duly summoned the man is to present himself at the trial. If he knows something and is prepared to testify, he should give evidence accordingly; if he claims he knows nothing, he must swear an oath to three gods, Zeus, Apollo and Themis, to the effect that quite definitely he has no information, and thus 937
be dismissed from the proceedings. If a man is summoned to give evidence and fails to answer the summons, he must be liable by law to a suit for damage. No juryman is to vote in a trial in which he has been put up as a witness and given evidence. A free woman is to be allowed to be a witness and to speak in support of a litigant, provided she is over forty years of age, and to bring prosecutions, provided she has no husband; but if she has a husband living, she must be limited to acting as a witness. Slaves (male and female), and children, should be allowed to support a b
case by giving evidence, but only in a trial for murder and provided a credit-worthy surety is put up to guarantee their appearance at the trial if their evidence is objected to as false. If either disputant claims someone has borne false witness, he should enter an objection to all or part of the testimony before a verdict in the case is decided on. The objections, under the seal of both parties, should be placed in official custody and produced at the trial for perjury. If anyone is convicted twice on this charge, he may c
not be *compelled* under any law to bear witness again; if he is convicted a third time, he must never be *allowed* to be a witness in the future; and if

he does have the face to give testimony on a further occasion after a third conviction, anyone who wishes should report him to the authorities, who should haul him before a court.

93. If he is found guilty,
he must be punished by death.

When a court decides to throw out evidence on the ground that the winning
d side has triumphed because certain witnesses have perjured themselves, and more than half the evidence is condemned, the suit lost on the strength of it should come up for retrial, and after due inquiry a ruling should be given that the false evidence was, or was not, the decisive influence on the verdict; and this ruling, whichever way it goes, will automatically settle the original action.

Although human life is graced by many fine institutions, most of them have their own evil genius, so to speak, which pollutes and corrupts them. Take justice, for instance, which has civilized so much of our behavior:
e how could it fail to be a blessing to human society? And granted justice is a blessing, can advocacy fail to be a blessing too? But valuable though they are, both these institutions have a bad name. There is a certain kind of immoral practice, grandly masquerading as a 'skill', which proceeds on the assumption that a technique exists—itself, in fact—of conducting one's own suits and pleading those of others,[18] which can win the day regardless of the rights and wrongs of the individual case; and that this skill itself
938 and the speeches composed with its help are available free—free, that is, to anyone offering a consideration in return. Now it is absolutely vital that this skill—if it really is a skill, and not just a knack born of casual trial and error—should not be allowed to grow up in our state if we can prevent it. The lawgiver will have nothing to say to those who obey his command that one should either listen to justice and not contradict her, or leave for some other country; but if anyone disobeys him, the law shall pronounce
b as follows: if anyone seems to be trying to misrepresent to the judges where the course of justice lies, and to enter one plea after another in support of either his own or someone else's case, when equity would call a halt, then anyone who wishes should indict him on a charge of perverse pleading or criminal advocacy. He should be tried in the court of select judges and if he is found guilty the court should decide whether it thinks his motive is avarice or pugnacity.

94. (a) If the court believes his motive is pugnacity,
it must determine how long he must refrain from prosecuting anyone or helping someone else to do so.
(b) If the motive appears to be avarice,
c (i) *a foreigner* must leave the country and never return, on pain of death;

18. Punctuating with the second dash after *autē* in e5 and a comma after *allōi* in e6.

(ii) *a citizen* must die, for letting a love of money become the obsession of his life.

95. If a man is convicted twice of committing such an offense through pugnacity,
he must die.

Book XII

If a man passes himself off as an ambassador or herald of the state and 941
enters into unauthorized negotiations with a foreign power, or, when actually sent on such a mission, delivers a message other than the one with which he was sent—or contrariwise if he is shown to have misreported, in his capacity as an ambassador or herald, the communications which enemy or friendly states have given him, he must be open to prosecution for violating the law by impiety against the pronouncements and instructions of Hermes and Zeus.

96. If he is convicted,
the penalty or fine he must pay will have to be assessed. b

Theft of property is uncivilized, and robbery with violence an act of brazen insolence. The sons of Zeus take no pleasure in fraud and force, and none of them has ever committed either of these crimes. So no one who commits such an offense should be seduced into believing the lies of poets or other story-tellers: the thief or thug mustn't think 'There's no shame in this—after all, the gods do it themselves.' That is neither plausible nor true, and no one who breaks the law by such an act can possibly be a god or child of gods. The lawgiver is in a much better position to understand these things than all the poets in the world. Anyone who is c
convinced by this doctrine of ours is a happy man, and long may he so continue; but anyone who refuses to listen should have some such law as this to contend with: all theft of public property, great or small, should attract the same punishment. The greed of the pilferer is just as great as any other thief's—it's only his efficiency that's inferior; whereas anyone who makes off with some valuable object he did not deposit indulges his d
criminal tendencies to the full. In the eyes of the law, the one deserves a lighter penalty than the other not because of the amount of the theft, but because he is probably curable while the other is not. Thus

97. (a) if anyone successfully prosecutes in court a foreigner or slave on a charge of theft of some piece of public property,
a decision must be reached as to the fine or penalty he should pay in view of the fact that he can probably be cured.
(b) If a citizen, in spite of the education he will have enjoyed, is convicted 942
of plundering or attacking his fatherland, whether he is caught in the

act or not,
he must be punished by death, as being virtually beyond cure.

Military service is a subject on which we need to give a great deal of advice and have a large number of regulations. The vital point is that no one, man or woman, must ever be left without someone in charge of him; nobody must get into the habit of acting alone and independently, either in sham fighting
b or the real thing, and in peace and war alike we must give our constant attention and obedience to our leader, submitting to his guidance even in tiny details. When the order is given we should stand, march, exercise, wash, feed, stay awake at night on duty as guards or messengers, and even in the midst of dangers not pursue the enemy or yield without a sign from our
c commander. In short, we must condition ourselves to an instinctive rejection of the very notion of doing anything without our companions; we must live a life in which we never do anything, if possible, except by combined and united action as members of a group. No better or more powerful or efficient weapon exists for ensuring safety and final victory in war, and never will. This is what we must practice in peacetime, right from childhood—the exercise of authority over others and submission to them in turn. Freedom from
d control must be uncompromisingly eliminated from the life of all men, and of all the animals under their domination.

In particular, all choruses should be calculated to encourage prowess in the field, and for the same reason people must learn to put a brave and cheerful face on it when they have to put up with poor food and drink, extreme cold and heat, and rough bedding. Most important, they must not ruin the natural powers of head and feet by wrapping them round with artificial protection, so discouraging the spontaneous growth of the
e cap and shoes that nature provides. When these two extremities are in sound condition they help to keep the whole body at the peak of efficiency, whereas their ruin is its ruin too. The feet are the most willing servants the body has, and the head is the organ of supreme control, the natural seat of all the principal senses of the body.

943 That's the praise of military life that ought, in my view, to ring in a young man's ears. Here are the regulations. When a man is called up, or detailed for some special duty, he is obliged to perform his military service. If he is a coward and fails to present himself, without the permission of his commanders, a prosecution for failure to serve should be brought before the military authorities after return from the field. Such cases must be judged by the soldiers who have fought in the campaign; the various categories (infantry, cavalry and the other branches of the armed forces) should meet separately, infantrymen being brought before infantrymen,
b cavalrymen before cavalrymen, and the others before their own comrades similarly.

98. If a defendant is found guilty,
(a) *he must* in future be debarred from
(i) competing for any kind of military distinction,

(ii) bringing a charge against anyone else for refusing to perform military service, and
(b) *the court* must assess the additional penalty or fine he is to pay.

Afterwards, when the charges of refusal to serve have been decided, the commanders must reconvene each arm of the forces and in the presence of the candidates' fellow soldiers seek decisions on those applying for awards of distinction. Supporting statements by eye-witnesses and other c
evidence adduced by the candidates must not relate to any previous campaign, but only to the one they have just fought. The prize in each case is to be a wreath of olive, which the winner should take to the temple of whichever god of war he pleases and dedicate it, suitably inscribed, as life-long evidence that the first, second or third prize was awarded to him.
If a man does go on active service, but returns home before the commanders withdraw the troops, he should be prosecuted on a charge of desertion d
before the same court as is concerned with refusal of service.

99. If he is found guilty,
the same penalties should apply as before [98].

Naturally, everyone who brings a prosecution ought to be very wary of inflicting an unjustified punishment, whether in cold blood or by accident. Justice is said—and well said—to be the daughter of Respect, and both e
are the natural scourges of falsehood. So in general we must be careful not to offend against justice, and particularly as regards the abandonment of weapons in the field: we mustn't reproach an enforced abandonment in mistake for an ignominious one, and so inflict penalties as undeserved as the victims are undeserving of them. Although it is by no means easy to tell the two cases apart, a rough and ready distinction must be attempted 944
in the legal code. We can explain the point with the help of a story. If Patroclus had pulled round after being carried to his tent without his weapons (as has happened in thousands of other cases)—the weapons which the poet tells us were presented to Peleus by the gods as a dowry when he married Thetis, and which had been taken by Hector—then it would have been open to all the scoundrels of the time to reproach the son of Menoetius for abandoning his arms.[1] Again, sometimes men have lost their weapons because of being thrown down from a height, or when b
at sea, or when suddenly caught up by a tremendous onrush of water during their struggles in a storm. There are countless similar circumstances one could plausibly adduce to excuse and palliate a disaster that positively invites denigration. So we must do our best to distinguish the more serious and reprehensible disasters from the other kind, and in a rough and ready way the distinction can be expressed by varying our expressions of rebuke. Thus 'he *abandoned* his shield' can sometimes be properly replaced by 'he

1. See *Iliad* xvi fin., xvii.125 ff., xviii.78 ff. In the Trojan war, Patroclus, son of Menoetius and companion of Achilles, while wearing the armor of Achilles' father Peleus, was killed by Hector.

c *lost* his weapons'. When you are robbed of your shield with some force, you have not 'abandoned' it in the same way as if you had thrown it away deliberately: the two cases are fundamentally different. The distinction should be written into the legal code in the following terms:

If a man finds the enemy at his heels and instead of turning round and defending himself with the weapons he has, deliberately lets them drop or throws them away, preferring a coward's life of shame to the glorious and blessed death of a hero, then there should certainly be a penalty for
d losing his weapons by abandonment. But when he has lost his weapons in the other way we've described the judge must not fail to take the fact into account. It is the criminal you need to punish, to reform him, not someone who's simply been unlucky—that's useless. So what will be the right penalty when someone has made good his escape by throwing away the weapons that could have protected him? Unfortunately, it's beyond the power of man to do the opposite of what people say some god did to Caeneus of Thessaly—that is, change him from a woman into a man. If only we could inflict the reverse transformation, from man to woman, that
e would be, in a sense, the most appropriate punishment for a man who has thrown away his shield. But what we *can* do is to reward him for saving his skin by giving him the closest possible approximation to such a penalty: we can make him spend the rest of his days in utter safety, so that he lives with his ghastly disgrace for as long as possible. Here's the law that will deal with such people:

100. If a man is convicted on a charge of shamefully dropping his weapons of war;
945 (a) *no general* or any other army officer must employ him as a soldier again, or appoint him to any position whatever;
(b) *and in addition* to being thus permitted, like the natural coward he is, to avoid the risks that only real men can run, the guilty man must also pay a sum of money: one thousand drachmas if he belongs to the highest property-class, five hundred if to the second, three hundred if
b to the third, and one hundred if to the lowest.[2]

101. If an officer disobeys and posts the coward again,
the officer's Scrutineer is to condemn him to pay the same fine: one thousand drachmas if he belongs to the highest property-class, five hundred if to the second, three hundred if to the third, and one hundred if to the fourth.

Well then, what will be the proper policy for us to adopt on the subject of Scrutineers? So far, we simply have a corps of officials, some appointed for a single year by the luck of the draw, others chosen from a preliminary slate of selected candidates to serve for several years. What if one of them proves so inadequate to the dignity and weight of his office that he gets 'out of true' and does something crooked? Who will be capable of making

2. In Plato's text the regulation called here 100(b) comes *after* 101.

a man like that go straight again? It is desperately difficult to find someone of high moral standards to exercise authority over the authorities, so to c
speak, but try we must. So where are our god-like 'straighteners' to be found? The point is this: a state has many crucial parts that prevent it from disintegrating, just as a ship has its stays and bracing ropes and a body its tendons and associated sinews. (Features of this kind are a very widespread phenomenon, and in spite of the many different names we give them in different contexts, they are basically the same sort of thing.) Now the office of Scrutineer is the single most crucial factor determining whether a state survives or disintegrates. If the Scrutineers are better men d
than the officials they scrutinize, and display irreproachable impartiality and integrity, the entire state and country flourishes and prospers. But if their investigation of the officials is conducted badly, then the sense of justice that unites all the interests in the state is destroyed, with the result that all the officials go their different ways and refuse to pull together any longer; they fragment the state into lots of smaller states by filling it with e
the party-strife that so speedily wrecks it. That is why it is absolutely vital that the moral standards of the Scrutineers should be exemplary. So let's try to produce these officials by some such procedure as this:

Every year after the summer solstice the entire state should congregate in a precinct dedicated jointly to Apollo and the Sun, in order to present to the god three out of their number. Each citizen is to propose that person, 946
apart from himself, whom he believes to be perfect in every way; the candidate is to be at least fifty years of age. This preliminary list should be divided into two halves (on the assumption that the total is an even number; if not, the person with the fewest votes should be excluded before the division is made), and the half consisting of those with the most votes should be selected to proceed to the next stage after the other half with fewer votes have been eliminated. If some names receive the same number of votes, so that the selected candidates are too numerous, the excess should be removed by eliminating the youngest candidates. The selected candidates that remain should be voted for again until only three are left, b
each with a different number of votes. If two of them, or all three, attract equal support, then the decision should be left to chance and the gods of good luck: the first, second and third choices must be determined by lot, crowned with olive and given the rewards of their success. Next, a public proclamation must be made to the effect that the state of the Magnesians, now by the grace of God securely re-established, presents to the Sun-god her three best men; and these, her choicest fruits, in accordance with the c
law of old, she consecrates for the term of their judicial office as a joint gift to Apollo and the Sun. In the first year twelve such Scrutineers are to be appointed, each to retain office till the age of seventy-five; thereafter three more are to be added every year.

The Scrutineers are to divide all the officials into twelve groups and look into their conduct by making all such inquiries as are consistent with the dignity of a gentleman. During their period of office as Scrutineers they are to live in the precinct of Apollo and the Sun where they were d

elected. When they have sat in judgment, either privately and individually, or in association with colleagues, on those at the end of their term of office in the service of the state, they must make known, by posting written notice in the market-place, what penalty or fine in their opinion each official ought to pay. Any official who refuses to admit that he has been judged impartially should haul the Scrutineers before the Select Judges, and if he is deemed innocent of the accusations he should accuse the
e Scrutineers themselves, if he so wishes. But

102. If he is convicted, and
(a) the Scrutineers had decided on death as his penalty,
he must die (a penalty which in the nature of the case cannot be increased); but
(b) if his penalty is one that it is possible to double,
then double he must pay.

Now we ought to hear about the scrutiny of the Scrutineers themselves. What will it be, and how will it be organized?

947 During their lifetime these men, whom the whole state has thought fit to dignify with the highest honors, should sit in the front seat at all the festivals; moreover, when the Greeks assemble to perform sacrifices or see spectacles together, or congregate for other sacred purposes, the leaders of the delegations sent by the state should be chosen from the Scrutineers; and the Scrutineers are to be the only citizens whose heads may be graced by a crown of laurel. They should all be priests of Apollo and the Sun; the chief priesthood should be an annual office, held by the Scrutineer
b who has come top of the list of those appointed that year—which must be recorded under his name, so as to provide a framework for the calendar for as long as the state endures.

After the death of a Scrutineer, his laying-out, his last journey and his tomb must be on a grander scale than for ordinary citizens. All cloth used must be white, dirges and laments must be banned, and a chorus of fifteen girls and another of fifteen youths must stand one on each side of the bier
c and sing alternately a kind of hymn of praise to the dead priest, celebrating his glory in song throughout the day. As dawn comes up the following day the bier shall be taken to the tomb escorted by a hundred of the youths who attend the gymnasia, chosen by the relatives of the dead man. In front must go the young men who are as yet unmarried, each rigged out in his own military equipment; the cavalry should bring their horses, the infantry their weapons, and so on. Around the bier itself, towards the front, will be
d boys chanting the traditional strains, followed by girls, and women who have finished bearing children. The Priests and Priestesses will bring up the rear; they are of course banned from other funerals, but provided the oracle at Delphi also approves, they shall attend this one, as it will not defile them. The Scrutineer's tomb shall be an oblong crypt built of choice[3] stone of the most indestructible kind obtainable; in this, on benches of stone set side by

3. Reading *protimōn* in d7.

side, they will lay him who has gone to his reward. On top of the tomb they e
will pile a circular mound, and plant a sacred grove of trees around it—
except on one side, to allow for the indefinite extension of the tomb, where
more earth will have to be piled up to cover subsequent burials. Every year
the citizens will hold competitions in the Scrutineers' honor, one athletic,
one equestrian, and one of the arts. All these honors will be bestowed on
Scrutineers whose conduct has borne scrutiny.

If a Scrutineer relies on his election to protect him and goes to the bad,
thus showing he's only too human after all, the law will order a charge
to be brought against him by anyone who feels inclined to prosecute.
The trial should be held in court according to the following procedure. 948
Guardians of the Laws, and all the Scrutineers, active or retired, must sit
in conjunction with the court of the Select Judges, and the charge brought
by the prosecutor against the defendant must be to the effect that 'so-and-
so is a disgrace to his distinctions and his office.'

103. If the defendant is convicted,
he must be ejected from his office, denied the special tomb, and stripped
of the honors he has already received.

104. If the prosecutor fails to win one fifth of the votes,
he must pay a fine of twelve hundred drachmas if he belongs to the
highest property-class, eight hundred if to the second, six hundred if to b
the third, and two hundred if to the lowest.

Rhadamanthus should be admired for the way in which, according to
report, he decided the suits that came before him. He realized that his
contemporaries were absolutely convinced of the existence of gods—and
not surprisingly, as most people alive then were actually descended from
them, and this is traditionally true of Rhadamanthus himself. I suppose
it was because he thought that no mere man should be given the task of
judging, but only gods, that he managed to make his judgments so swift
and straightforward. Whatever the subject of dispute, he made the litigants
take an oath, a device which enabled him to get through his list of cases c
rapidly and without making mistakes. Nowadays, however, some people
(as we remarked) don't believe in gods at all, while others believe they
are not concerned about mankind; and there are others—the worst and
most numerous category—who hold that in return for a miserable sacrifice
here and a little flattery there, the gods will help them to steal enormous
sums of money and rescue them from all sorts of heavy penalties. So in
the modern world the legal procedure used by Rhadamanthus will hardly
do. The climate of opinion about the gods has changed, so the law must d
change too, and a legislator who knows his business ought to abolish the
oaths sworn by each side in a lawsuit. When a man brings a charge against
someone, he should put his accusations in writing without taking an oath;
the defendant should similarly write out his denial and hand it to the
officials unsworn. It would be dreadful, you see, to know quite well, in
view of the frequent lawsuits that occur in the state, that although pretty

e nearly half our citizens[4] have perjured themselves, they go on mixing with each other at common meals and other public and private gatherings without the slightest qualms.

There should therefore be a law requiring a juryman to take an oath before setting about his job. The law should also apply to anyone who votes in the election of officials to public positions: he must do so either
949 under oath or with a ballot-pebble he has obtained from a temple; so too should the judge of a chorus or any other artistic performance, and also the supervisor or umpire of any athletic or equestrian competition—and indeed the judge in any matter where there is nothing to 'gain' (as it seems to human eyes) from perjury. But whenever there is clearly much to be 'gained' from denials and oaths to back them up, then the question at issue between the disputants must be judged at a trial in which oaths are *not* taken.

And more generally, the presiding officials at a trial are not to give a
b man a hearing if he tries to win belief by swearing oaths, or imprecating himself or his family, or by grovelling appeals for clemency, or effeminate wailing, but only if he states his lawful claims, and listens to those of the other side, with decency and decorum. Otherwise, the officials will ignore his remarks as irrelevant and instruct him to return to the issue before the court.

c However, aliens should be entitled, as at present, to offer and accept binding oaths from each other, if they so wish—after all, they're not going to grow old in the state, nor, as a rule, build a nest in it to produce others entitled to live in the country and behave in the same way as themselves. And whenever an alien prosecutes an alien, the trial should be held under the same rules.

Sometimes a free man may defy the state in something not serious enough to deserve a whipping or imprisonment or death—by refusing to take part in a chorus or procession, for instance, or some public ceremony,
d or to pay some contribution for such communal purposes as a sacrifice in time of peace, or a special levy in war. The first thing to be done in all these cases is to assess the damages; then the culprit is to give a pledge to those officials who have the duty of exacting it under the law of the land. If he still refuses to obey even after the seizure of the pledge, it should be sold and the proceeds confiscated by the state. If a more severe punishment is called for, the official concerned shall impose the appropriate
e fine on this stubborn fellow and haul him through the courts until he's prepared to do as he's told.

A state which does not go in for trading and whose only source of wealth is the soil is obliged to have some settled policy regarding the foreign travel of its own citizens and the admission of aliens from abroad. The legislator, who has to give advice on these problems, must start by being as persuasive as he can.

4. Alternatively, 'half the litigants'.

In the nature of the case, contact between state and state produces a medley of all sorts of characters, because the unfamiliar customs of the 950
visitors rub off on to their hosts—and this, in a healthy society living under sound laws, is an absolute disaster. Most states, however, are not well run at all, so it makes no difference to them if their citizens fraternize with foreigners by welcoming them into the state and by going for trips abroad themselves whenever they feel like it and wherever their wanderlust takes them, whatever their age. On the other hand a policy of complete exclusion and complete refusal to go abroad is just not feasible, and in any case the rest of the world would think us churlish and uncivilized: we'd get the b
reputation of being a truculent and surly people who have 'Deportations of Aliens', as the term is—and a brutal one it is, too. Whether the figure you cut in the eyes of others is good or bad, you should never underestimate its importance. You see, people in general don't fall so far short of real goodness that they can't recognize virtue and vice when they see it in others; even wicked people have an uncanny instinct that usually enables even an absolute villain to understand and describe accurately enough c
what distinguishes a good man from a bad. That is why most states find it an excellent precept to value their good standing with the rest of the world. But the soundest and most important rule is this: if you mean to be perfect, you should seek to live in good repute only if you are really good in the first place, but not otherwise. And so it will be entirely right and proper if the state we are now founding in Crete wins among men a brilliant and glorious reputation for virtue, and if things go according to plan there is every reason to expect that, out of all the states and countries d
which look upon the Sun and the other gods, Magnesia will be one of the few that are well administered.

So what should we do about the admission of aliens and our own journeys to places in foreign countries? First of all, no young person under forty is ever to be allowed to travel abroad under any circumstances; nor is anyone to be allowed to go for private reasons, but only on some public business, as a herald or ambassador or as an observer of one sort or another. (Of course, absence abroad on miliary service in wartime doesn't deserve e
to be mentioned in the same breath: it's not one of those journeys which are 'for diplomatic reasons'!) We must send representatives to take part in the sacrifices and games held at Delphi in honor of Apollo and at Olympia in honor of Zeus, and to Nemea and the Isthmus; and we must send as many representatives as we can, the finest and noblest of our citizens, who will do credit to our state in these sacred gatherings of peace, 951
and win it renown to match that of her armies on the field of battle. And when they return, they will tell the younger generation that the social and political customs of the rest of the world don't measure up to their own.

But there are other kinds of observers who should be dispatched, provided the Guardians of the Laws give permission. If any citizen would like to spend rather longer surveying at his leisure the life lived by foreigners, no law should prevent him, because no state will ever be able to live at a

properly advanced level of civilization if it keeps itself to itself and never
b comes into contact with all the vices and virtues of mankind; nor will it be able to preserve its laws intact if it just gets used to them without grasping their raison d'être. In the mass of mankind you'll invariably find a number—though only a small number—of geniuses with whom it is worth anything to associate, and they crop up just as often in badly-ruled
c states as in the well-ruled. So the citizen of a well-run state, provided he's incorruptible, should go out and range over land and sea to track them down, so that he can see to the strengthening of the customs of his country that are soundly based, and the refurbishing of any that are defective. Without this observation and research a state will never stay at the peak of perfection; nor will it if the observers are incompetent.

CLINIAS: So how can we ensure that both these requirements are met?

ATHENIAN: Like this. In the first place, anyone who goes observing for us in this fashion must be over fifty; and since the Guardians of the Laws are going to send him abroad as a specimen Magnesian, he must be one of those citizens who have gained a good reputation generally, and particu-
d larly in war; and on passing sixty he must go off observing no longer. When he has spent as many of his ten years as he pleases making his observations, he should come home and present himself before the council which muses on legislation. (This council,[5] which should consist partly of young men and partly of old, must have a strict rule to meet daily from dawn until the sun is well up in the sky. Its membership is to be: (1) those Priests who have won high distinction, (2) the ten Guardians of the Laws
e who are currently the most senior, (3) the Minister of Education for the time being, together with his predecessors in office. No member should attend alone: each is to bring a young man of his own choice, aged between thirty and forty. The discussion at their meetings must always center round
952 their own state, the problems of legislation, and any other important point relevant to such topics that they may discover from external sources. They must be particularly concerned with those studies which promise, if pursued, to further their researches by throwing light on legislative problems that would otherwise remain difficult and obscure. Whichever of these studies are sanctioned by the older members should be pursued with all diligence by the younger. If one of the protégés invited to attend is judged to be inadequate, the whole council is to censure the man who
b invited him; but any that get a good name should be fostered and watched with particular care by the state at large, and if they do what's wanted of them, they are to be specially honored, but if they turn out worse than most other young men they should suffer correspondingly worse disgrace.) To this council, then, the observer of foreign customs must proceed as soon as he gets back. If he has come across people who were able to give him some information about any problems of legislation or teaching or education, or if he actually comes back with some discoveries of his own,

5. Apparently the 'Nocturnal' council, which has not yet been announced: see 960b ff.

he should make his report to a full meeting of the council. If he seems to c
be not a whit better or worse for his journey, he should be congratulated at any rate for his energy; if he is thought to have become appreciably better, even higher recognition should be given him during his lifetime, and after his death he must be paid appropriate honors by authority of the assembled council. But if it seems that he has returned corrupted, this self-styled 'expert' must talk to no one, young or old, and provided he obeys the authorities he may live as a private person; but if not, and

105. he is convicted in court of meddling in some educational or legal d
question,
he must die.

106. If none of the authorities takes him to court when that is what he deserves,
it should count as a black mark against them when distinctions are awarded.

So much for the way foreign travel should be undertaken and the sort of persons who should venture on it. But what about our duty to welcome foreign visitors? There are four categories of them worth discussing. Those in the first turn up every year without fail, usually in summer, with the e
regularity of migrating birds. Most of them are on business trips in search of profit, and throughout the summer they 'wing' their way like so many birds across the sea to foreign parts. They must be received at trading posts and harbors and in public buildings outside but not far from the state by officials appointed for the purpose, who should (a) take good care that none of this category of visitor introduces any novel custom, (b) 953
handle with proper impartiality the lawsuits that affect them, and (c) keep intercourse with them down to the unavoidable minimum. The second type are 'observers' in the most basic sense: they come to see the sights, and to listen, too, at festivals of the arts. All such visitors should be received in hospitable lodgings near temples, by whose priests and custodians they are to be looked after and attended to. Then, when they have stayed for a reasonable length of time, and seen and heard what they came to see and hear, they should take their leave without having inflicted or suffered any harm. If anyone injures them, or they injure anyone else, the Priests b
are to act as judges, provided no more than fifty drachmas are involved. If the claim is for a greater sum, the trial must be held before the Market-Wardens.

The third type of visitor, who arrives from another country on some matter of state, should be received at public expense, and by no one except Generals, Cavalry-Commanders and Company-Commanders. Together with the executive for the time being, the official by whom he is put up and entertained should have the sole responsibility for him. c

Sometimes, though rarely, a fourth kind of visitor arrives. If ever a counterpart to our own observers comes from a foreign country, we shall

first of all require that he should be not less than fifty years old, and in addition he should profess to be coming to view something whose excellence surpasses that of anything in the rest of the world, or to report on some such feature to another state. Such a man may dispense with invitations, and present himself at the doors of the wise and rich, because that is the class of man he is himself. In the full confidence that he is the right sort of guest for such a distinguished host, he should go to the home of (say) the Minister of Education, or of someone who has won an award for virtue. He should spend his time in the company of one or other of these, and after an exchange of information take his leave, duly honored as a friend by friends with fitting presents and tokens of esteem.

These are the laws that should govern the reception of all our visitors from abroad, of either sex, and the dispatch of our own people to other countries. We must show respect for Zeus the God of Strangers, and not keep aliens at arm's length by uncongenial food and offensive sacrifices (like the sons of Old Father Nile do nowadays), or by uncivilized proclamations.

Anyone who stands surety should do so in precise terms, by specifying all the details of the agreement in a written contract, before not less than three witnesses if the sum involved is less than one thousand drachmas, and not less than five in the case of greater sums. (Also, a warrantor[6] is surety for a vendor who is insolvent or cannot be sued, and is to have the same liability in law.)

When a man wants to search someone else's premises, he should do so clad in only his tunic,[7] without a belt, and after swearing to the gods specified by law that he really does expect to find what he's looking for. The other party is to open up his home, including all its sealed and unsealed property, to be searched; if he refuses permission to search to anyone requesting it, the party thus hindered must go to law, giving his estimate of the value of the object he is looking for.

107. If the defendant is convicted,
he must pay double the estimated value as damages.

If the owner of the house happens to be away, the residents must make unsealed property available for search; sealed property should be countersealed by the searcher, who should then post anyone he likes to guard it for a period of five days. If the householder stays away for longer than that, the other party should fetch the City-Wardens and make the search, opening up sealed property as well and sealing it up again afterwards in the same way in the presence of the household and the City-Wardens.

Now for cases when title is in dispute. After a certain period has elapsed, it must be no longer possible to challenge the rights of the person in

6. The vendor from whom the vendor bought the object in question.

7. Deleting *ē* in a5.

possession. In Magnesia, of course, dispute about land or houses is out of the question. But as for other possessions, if a man has used something openly in town or market-place or temple, and no one has tried to recover it and claimed to have been looking for it all the time the other man has obviously made no attempt at concealment, then provided the ownership of the one party and the search of the other have continued for a year, d
after the expiry of that period no claim for recovery is to be permitted. If a man uses an object openly, not indeed in town or market-place, but in the countryside, and no one confronts him with a claim to it for five years, then on the expiry of that period no one is to be allowed to attempt repossession. If the article is used in a man's town house, the time limit is to be three years; if it is kept in a building in the country, ten years; and if it is used abroad, then there is to be no time limit for recovery at e
all, however long the claimant may take to find it.

Sometimes a man may forcibly prevent a litigant or witness from appearing at a trial. If he prevents a slave, his own or another's, the suit should be null and void.

108. If he prevents a free man,
he must be imprisoned for a year and be liable to a suit for kidnapping 955
at the hands of anyone who cares to prosecute, and the suit will be null in any case.

If a man forcibly prevents a rival competitor from participating in an athletic or cultural or any other contest, anyone who wishes should report the fact to the supervisors of the games, who should set the would-be contestant free to enter the competition. If they prove unable to do so, and the man responsible for the competitor's absence wins, the prize should be awarded to the person prevented from competing, and he should be b
recorded as the winner in any temple he pleases.

109. The person who has hindered him must not be allowed to make any dedication or record relating to that contest, and he must be liable to a prosecution for damages whether he wins or loses.

110. If a man receives stolen goods, knowing them to be stolen,
he must suffer the same penalty as the thief.

111. The penalty for harboring an exile should be death.

Everyone is to have the same friends and enemies as the state.

112. (a) If a man makes a private peace or wages private war with c
anyone without the backing of the state,
he too must be punished by death.

If any sectional interest in the state makes peace or war with any parties on its own account, the Generals must haul those responsible for the affairs before a court.

(b) If the defendants are convicted,
death should be the penalty.

Members of the public service should perform their duties without taking bribes. Such a practice must never be extenuated by an approving reference to maxims like 'One good turn deserves another'. It is not easy for an
d official to reach his decisions impartially and stick to them, and the safest thing he can do is to listen to the law and obey its command to take no gifts for his services.

113. If a man disobeys and is convicted in court,
the only penalty permitted is to be death.

Now to deal with payments to the public treasury. For a variety of reasons, an assessment must be made of each man's property, and the members of the tribes must make a written return of the year's produce to the Country-Wardens. The treasury will thus be able to use whichever
e of the two methods of exacting payment it finds convenient—that is, every year the authorities will decide to levy a proportion *either* of the sum total of the individual assessments *or* of the revenues accruing that particular year. (Payment for the common meals should be excluded from the calculations.)

The offerings a reasonable man makes to the gods should be on a correspondingly reasonable scale. As the earth and every household's hearth are already sacred to all the gods, no one should consecrate them a second time. The gold and silver that you find in temples and private
956 houses in other states encourage jealousy; ivory, taken as it is from a lifeless body, is an unclean offering; and iron and bronze are instruments of war. A man may offer at the public temples any objects he likes made of wood or stone, provided that in either case it consists of no more than a single piece; if he offers woven material, it should not exceed what one woman can produce in a month. In general, and particularly in the case of woven material, white is the color appropriate to the gods; dyes must not be
b employed, except for military decorations. The gifts the gods find most acceptable are birds and pictures, provided they do not take a painter more than a single day to complete. All this should serve as a pattern for all our other offerings.

Now that we have described the nature and number of the parts into which the whole state is divided, and done what we can to frame laws for all the most important agreements men make, we're left with the question of legal procedure. The court of first resort will consist of judges—arbitrators, in fact, but 'judges' is really a more appropriate title—chosen
c by agreement between prosecutor and defendant. If the case is not settled in the first court, the litigants should go and contest it again before the second (composed of villagers and tribesmen, duly divided into twelve groups), but at the risk of an enhanced penalty: if the defendant loses for the second time, he must be mulcted an additional fifth of the penalty

previously assessed and recorded. If he is still aggrieved with his judges and wants to fight the case for the third time, he must take it to the Select d
Judges, and if he is defeated again, he is to pay one and a half times the original penalty. As for the prosecutor, if he is not prepared to lie down under defeat in the first court, and goes before the second, he should be awarded the extra fifth of the penalty if he wins, but be fined that amount if he loses. If the litigants refuse to acquiesce in the earlier decision and go before the third court, and the defendant loses, he must pay one and a half times the penalty as already stated; if the prosecutor loses, he must be fined one half of it. e

But what about the balloting for jurors, and the procedure for making up the juries? What about the appointment of attendants for the various officials, the fixing of times at which the various formalities should be completed, voting methods, adjournments, and all the other similar inescapable details of legal procedure, such as putting cases early or late in the calendar, the enforcement of attendance and of replies to interrogation, and suchlike? Well, we've made the point before, but the truth is all the better for being stated two or even three times. All these minor rules are 957
perfectly easy to invent, and the senior legislator may skip them and leave it to his young successor to fill in the gaps. But although that will be reasonable enough in the case of the courts that are appointed privately, the common public courts, and those that the various officials need to use in the performance of their duties, need a rather different approach. Sensible people in several states have framed a good many decent regulations which our Guardians of the Laws should adapt for the state that we are now b
founding. The Guardians should examine them and touch them up after trying them out in practice, until they think they have licked each single one into shape; then they should finalize them, ratify them as immutable, and render them lifelong obedience. Then there is the question of the silence of the judges, and the restraint or otherwise of their language, as well as all the other details in which our standards of justice and goodness and decorum differ from those you find in such variety in other states. We've already had something to say on this topic, and we shall have more to say towards the end. The judge who wants to act with proper judicial c
impartiality should bear all these points in mind and get hold of books in which to study the subject. The study of laws, provided they are good laws, is unsurpassed for its power to improve the student. (It can't be an accident that the name of this god-given and wonderful institution, law, is so suggestive of reason.)[8] And other compositions, such as eulogies or censures in verse or prose, in the latter case either taking written form or being simply spoken during our day-to-day contacts when we indulge in d
contentious argument or (sometimes thoughtlessly) express our agreement—all these will be measured against a clear criterion: the writings of the legislator, which the good judge will treasure as a kind of antidote

8. *Nomos* ('law') suggests *nous* ('reason').

against the others, so as to ensure his own moral health and that of the state. He will confirm and strengthen the virtuous in the paths of righteous-
e ness, and do his best to banish ignorance and incontinence and cowardice and indeed every sort of injustice from the hearts of those criminals whose outlook can be cured. However—and this is a point that deserves constant
958 repetition—when a man's soul is unalterably fixed in that condition by decree of fate, our erudite judges and their advisers will deserve the commendation of the whole state if they cure him by imposing the penalty of death.

When the suits for the year have been finally decided, the following laws must apply to the execution of judgment. First of all, immediately after the voting in each case, and by proclamation of a herald in the hearing of the judges, the official who has pronounced sentence should assign all
b the property of the convicted party, except the minimum he must retain, to the successful prosecutor. If after the expiry of the month following that in which the case was tried the loser has not settled the business with the victor to the satisfaction of both, the official who gave judgment must at the request of the victorious party hand over the goods of the loser. If the latter lacks the means to pay, and the deficiency amounts to a drachma or more, he must not be allowed to prosecute other people (they however,
c being entitled to prosecute *him*), until he has paid his debt in full to his opponent. If someone who has received an adverse verdict obstructs the bench that condemned him, the officials thus obstructed should haul him before the court of the Guardians of the Laws.

114. If he is convicted on such a charge,
he must be punished by death,

on the grounds that his conduct is wrecking the entire state and its laws.

Now here's the next point. A man is born and brought up, and begets and rears his own children in turn; he deals fairly in his business transac-
d tions, paying the penalty if he has done anyone injury and exacting one if others have wronged him; and finally, as destiny decrees, after an old age spent in obedience to the laws, the course of nature will bring him to the end of his life. So what should we do when a man or woman has died? First, we must bow to the absolute authority of the Expounders' instructions about the sacred rites to be observed in honor of the nether gods and those of this world. No tomb, whether its mound is large or small, should be constructed anywhere on land that can be farmed; graves
e must take up space only where nature has made the ground good for nothing except the reception and concealment of the bodies of the dead with minimum detriment to the living, because no one, alive or dead, must ever rob the living of any land which—thanks to the natural fertility of Mother Earth—will grow food for the human race. The soil must not be piled higher than five men can manage by working for five days. Stone slabs must not be made bigger than they need to be to accommodate a

eulogy of the deceased's career of not more than the usual four hexameters. 959
The laying-out at home should not last longer than is necessary to confirm that the person really is dead and not just in a faint; in average cases, it will be reasonable for the body to be taken to the tomb after two days.

We should, of course, trust whatever the legislator tells us, but especially his doctrine that the soul has an absolute superiority over the body, and that while I am alive I have nothing to thank for my individuality except my soul, whereas my body is just the likeness of myself that I carry round with me. This means we are quite right when we say a corpse 'looks like' b
the deceased. Our real self—our immortal soul, as it is called—departs, as the ancestral law declares, to the gods below to give an account of itself. To the wicked, this is a terrifying doctrine, but a good man will welcome it. And once he's dead, there's not a great deal we can do to help a man: all his relatives should have helped him while he was still in the land of the living, so that he could have passed his life in all possible justice and c
holiness; and then after death he could have escaped the penalty visited on evil deeds in the life to come. This all goes to show that we should never squander our last penny, on the fanciful assumption that this lump of flesh being buried really is our own son or brother or whoever it is we mournfully think we are burying. We ought to realize that in fact he has departed in final consummation of his destiny, and that it is our duty to make the best of what we have and spend only a moderate sum on the body, which we may now think of as a kind of altar to the gods below, d
now deserted by its spirit; and as for what is meant by 'moderate' in this matter, the most respectable ideas will be those of the legislator. The law, then, should specify a reasonable level of expenditure as follows. In the case of a member of the highest property-class, the whole funeral should not cost more than five hundred drachmas; three hundred may be spent on a member of the second class, two hundred on a member of the third, and one hundred on a member of the fourth.

The Guardians of the Laws will have to shoulder a great many burdens and responsibilities, but their overriding duty will be to devote their lives e
to the care of children and adults and indeed persons of all ages. In particular, when a man is nearing his end his household should invite one Guardian to take charge of him, and if the funeral arrangements pass off decorously and without extravagance, this Guardian-in-charge will get the credit, but if not, then the blame will be at his door. The laying-out and other matters should take place according to usage, but usage must be modified by the following directions of our legislator-statesman. 'Tasteless though it is to forbid or instruct people to weep over the dead, dirges 960
should be forbidden; and cries of mourning should be allowed only inside the house. The mourners must not bring the corpse on to the open street nor make their procession a noisy one, and they must be outside the city by day-break.' So much for the regulations on the subject. The person who obeys them will never be punished, but

115. if a man disobeys a single Guardian of the Laws,
he must be punished by them all with whatever penalty recommends itself to their united judgment.

b The other methods of burying the dead, and the kind of criminals to whom we deny burial, such as parricides, temple-robbers and all similar categories, have already been specified and provided for in the legal code.[9] And that means, I suppose, that we have pretty well come to the end of our legislation.

ATHENIAN: However, even when you have achieved or gained or founded something, you have never quite finished. Only when you have ensured complete and perpetual security for your creation can you reckon to have done everything that ought to have been done. Until then, it's a case of
c 'unfinished business'.

CLINIAS: Well said, sir—but what's the particular point you had in mind in saying that? Could you be a little clearer?

ATHENIAN: Well, you know, Clinias, a lot of old expressions are extraordinarily apt. I'm thinking particularly of the names of the Fates.

CLINIAS: What names?

ATHENIAN: Lachesis for the first, Clotho for the second, and Atropos for the third fulfiller of destiny[10]—the last so called from her likeness to a
d woman making the threads on her spindle irreversible.[11] That is precisely the situation we want to see in our state and its citizens—not merely physical health and soundness, but the rule of law in their souls and (more important than all that) the preservation of the laws themselves. In fact, it seems to me that the service we've still not done for the laws is to discover how to build into them a resistance to being reversed.

CLINIAS: That's serious, because I don't suppose there's a way of giving anything that sort of property.

e ATHENIAN: But there is. I see that quite clearly now.

CLINIAS: Well then, we mustn't abandon our task till we've achieved this for the legal code we've expounded. It would be silly to waste our labor on something by failing to construct it on a firm foundation.

ATHENIAN: You're right to encourage me, and you'll find me as keen as you are.

CLINIAS: Splendid! So what is this safety device for our political system and legal code going to be, according to you? And how can we construct it?

961 ATHENIAN: We said[12] that we ought to have in the state a council with the following range of membership. The ten Guardians of the Laws who are currently the eldest were to convene together with all persons who had won awards of distinction and the travelers who had gone abroad to

9. 717e–718a, 872e ff., 908e ff., and 947b ff.

10. Respectively 'the Distributor of Lots', 'the Spinner', and 'the Inflexible One'.

11. Reading *atraktōi* in c9.

12. 951d–952d.

see if they could discover any special method of keeping a legal code intact. When these observers got back safe and sound, they were to be accepted as suitable associates of the council, provided they had first passed the scrutiny of its members. In addition, each member had to bring a young man of at least thirty years of age, but only after selecting him as b particularly well qualified by natural abilities and education; on these terms the young man was to be introduced to the other members of the council, and if they approved of him, he was to join them; if not, they were not to breathe a word to anyone about the fact that he was considered, least of all to the rejected candidate himself. The council was to meet before dawn, when people are least beset by other business, public or private. That was more or less the description we gave earlier, wasn't it? c

CLINIAS: Certainly it was.

ATHENIAN: So I'm going to resume the subject of this council, and here's the point I want to make about it. I maintain that if one were to lower it as a sort of 'anchor' for the whole state, then provided conditions were suitable, it would keep safe everything we wanted it to.

CLINIAS: How so?

ATHENIAN: Now at this crucial moment, we must strain every muscle to get things right.

CLINIAS: That's a fine sentiment. Now do what you have in mind.

ATHENIAN: The question we have to ask about anything, Clinias, is this: d what is it that has the special power of keeping it safe in each of its activities? In a living creature, for instance, this is the natural function of the soul and the head, in particular.

CLINIAS: Again, what's your point?

ATHENIAN: Well, when these two are functioning satisfactorily, they ensure the animal's safety, don't they?

CLINIAS: How so?

ATHENIAN: Because no matter what else is true of either, the soul is the seat of reason and the head enjoys the faculties of sight and hearing. In short, the combination of reason with the highest senses constitutes a single faculty that would have every right to be called the salvation of the animal concerned.

CLINIAS: That's likely enough, I suppose.

ATHENIAN: Of course it is. But *how* do reason and the senses combine to e ensure the safety of a ship, in fair weather or foul? Isn't it because captain and crew interpret sense-data by reason, *as embodied in* the expertise captains have, that they keep themselves and the whole ship safe?

CLINIAS: Naturally.

ATHENIAN: We've no need to multiply examples, but take a general in command of his army, or any doctor tending a human body. What will they each aim at, on the assumption that they intend, as they should, to preserve their charges safe and sound? Won't the general aim at victory 962 and control over the enemy, and won't doctors and their attendants aim to keep the body in a healthy condition?

CLINIAS: Of course.

ATHENIAN: Now consider a doctor who can't recognize the state of the body we've just called 'health', or a general who doesn't know what's meant by 'victory' and the other terms we reviewed. Could either of them possibly be judged to have a rational knowledge of his field?

CLINIAS: Of course not.

ATHENIAN: And if the ruler of a *state* were obviously ignorant of the
b target at which a statesman should aim, would he really deserve his title 'ruler'? Would he be capable of ensuring the safety of an institution whose purpose he entirely failed to appreciate?

CLINIAS: Certainly not.

ATHENIAN: Well then, in the present circumstances, if our settlement of this territory is to be finished off properly, it looks as if we shall have to provide it with some constituent that understands (a) this target we have mentioned—the target, whatever we find it is, of the statesman, (b) how to hit it, and (c) which laws (above all) and which persons have helpful advice to give and which not. If a state lacks some such constituent, no
c one will be surprised to see it staggering from one irrational and senseless expedient to another in all its affairs.

CLINIAS: That's true.

ATHENIAN: So is there any institution or constituent part of our state qualified and prepared to function as an organ of protection? Can we name one?

CLINIAS: No, sir, not with much assurance, anyway. But if guess I must, I think your remarks point to the Council you said just now had to convene during the night.

d ATHENIAN: You've caught my meaning splendidly, Clinias. As the drift of our present argument shows, that body must possess virtue in all its completeness, which means above all that it will *not* take erratic aim at one target after another but keep its eye on one single target and shoot all its arrows at that.

CLINIAS: Certainly.

ATHENIAN: Now we can see why it is hardly surprising that rules and regulations fluctuate so much from state to state: it is because legislation has a different aim in each. Nor is it surprising that in most cases you find that some people think of justice as nothing but the subjection of the state
e to the rule of this or that type of person without regard to their vice or virtue, while others think of it as the opportunity to become rich, no matter whether they are thereby enslaved or not; others again are bent hell for leather on a life of 'freedom'. Some legislators keep both ends in view, and their laws have the dual purpose of securing control over other states *and* freedom for their own. The cleverest legislators of all (as they like to think of themselves), so far from aiming at one single end, look not only to these but all others like them, simply because they cannot identify any supremely valuable end to which all others ought, in their view, to contribute.

CLINIAS: Well then, sir, the line we took so long ago was the right one. 963
We said that every detail of our legislation ought to have a *single* end in view, and the proper name to call it was, I think we agreed, 'virtue'.[13]

ATHENIAN: Yes.

CLINIAS: And I think we maintained that the virtues were four.

ATHENIAN: Indeed we did.

CLINIAS: The leading one, to which not only the other three but everything else should be orientated, was reason.

ATHENIAN: You take the point admirably, Clinias. Now follow the rest of the argument. As far as the captain, doctor and general are concerned, b
we have already indicated that their intellect aims at some appropriate single end. Now it is the turn of the statesman's reason to be investigated. Let's personify it and ask it the following question: "My good sir, what aim do *you* have in view? What's your single overriding purpose? The intelligent doctor can identify his accurately enough, so can't you, with all your superior wisdom (as I suppose you'd claim), identify yours?" Or can you two, Clinias and Megillus, answer for him and tell me precisely what your notion of his aim is, just as I've often given you detailed accounts c
of the notions of many other people on their behalf?

CLINIAS: No, sir, we certainly cannot.

ATHENIAN: What about replying, 'I think he should make every effort to get an overall understanding of his aim, as well as see it in its various contexts'?

CLINIAS: What contexts, for example?

ATHENIAN: Well, when we said there were four species of virtue, obviously the very fact that there were four meant that each had to be thought of as somehow distinct from the others.

CLINIAS: Surely.

ATHENIAN: Yet in fact we call them all by a single name. We say courage is virtue, wisdom is virtue, and the other two similarly, on the ground that really they are not several things but just one—virtue. d

CLINIAS: Very true.

ATHENIAN: It's not hard to explain how these two 'virtues' and the rest *differ* from each other and how each has acquired a different name. The real problem is this: why, precisely, have we described both of them (as well as the others) by this *common* term 'virtue'?

CLINIAS: What do you mean?

ATHENIAN: My point is perfectly easy to explain. Shall we let one of us ask the questions, and the other answer them?

CLINIAS: Again, what do you mean?

ATHENIAN: Here's the question for you to put to me: "Why is it that after e
calling both by the single term 'virtue', in the next breath we speak of two 'virtues', courage and wisdom?" I'll tell you why. One of them, courage, copes with fear, and is found in wild animals as well as human

13. See 630d–e.

beings, notably in the characters of very young children. The soul, you see, becomes courageous by a purely natural process, without the aid of reason. By contrast, in this absence of reason a wise and sensible soul is out of the question. That is true now, has always been true, and always will be true; the two processes are fundamentally different.

CLINIAS: That's true.

964 ATHENIAN: So there's your explanation of why there are two different virtues. Now it's your turn: you tell me why they are one and the same thing. Your job, you understand, is to tell me why the four of them nevertheless form a unity; and when you have demonstrated that unity, ask me to show you again in what sense they are four.

Next after that we ought to ask ourselves what constitutes adequate knowledge of any object that has a name and a definition: is it enough to know only the name and not the definition? On the contrary, if a man is worth his salt, wouldn't it be a disgrace in him not to understand all these
b points about a topic so grand and so important?

CLINIAS: Presumably it would.

ATHENIAN: And as for a giver or guardian of laws, and indeed anyone who thinks of his own virtue as superior to the rest of the world's, and has won awards for his achievement, *is* there anything more important than the qualities we are now discussing—courage, restraint, justice and wisdom?

CLINIAS: Of course not.

ATHENIAN: So in such circumstances what role should the expounders, teachers and lawgivers—the guardians of the rest of the community—
c play when a criminal needs enlightenment and instruction, or perhaps correction and punishment? Should they not prove better than anyone else at giving him a full explanation and description of the effects of virtue and vice? Or is some poet-visitor to the state, or some self-styled 'educationalist', going to put up a better show than the winner of the palm for every kind of virtue? Where there are no efficient and articulate guardians with an adequate understanding of virtue, it will be hardly
d surprising if the state, precisely because it is unguarded, meets the fate of so many states nowadays.

CLINIAS: No, hardly surprising at all, I suppose.

ATHENIAN: Well then, shall we carry out these proposals, or what? Shall we make sure our guardians are more highly qualified than the man in the street to explain what virtue is, and to put it into practice? How else could our state function like the head and sense of a wise man, now that it possesses within itself something analogous to protect it?

CLINIAS: Where is this resemblance, sir? How do we draw such a comparison?

e ATHENIAN: Obviously the state itself corresponds to the trunk, and the junior guardians, chosen for their natural gifts and the acuteness of their mental vision, live as it were at the summit and survey the whole state; they store up in their memory all the sensations they receive while on
965 guard, and act as reporters for their elder colleagues of everything that

takes place in the state; and the old men—we could compare them to the intellect, for their high wisdom in so many vital questions—take advantage of the assistance and advice of their juniors in debating policy, so that the joint efforts of both ranks effectively ensure the safety of the entire state. Now is this the sort of organization we want to see, or some other? Should the state, in fact, keep all its citizens on the same level, without giving some a more specialized training and education than others?

CLINIAS: My dear sir! That's quite impracticable.

ATHENIAN: Then we have to pass on to a more advanced education than b
the one we described earlier.

CLINIAS: Perhaps so.

ATHENIAN: What about the education we touched on a moment ago? Would that answer our needs?

CLINIAS: Certainly it would.

ATHENIAN: Didn't we say that a really skilled craftsman or guardian in any field must be able not merely to see the many individual instances of a thing, but also to win through to a knowledge of the single central concept, and when he's understood that, put the various details in their proper place in the overall picture?

CLINIAS: We did, and rightly.

ATHENIAN: So what better tool can there be for a penetrating investigation c
of a concept than an ability to look beyond the many dissimilar instances to the single notion?

CLINIAS: Probably none.

ATHENIAN: 'Probably!' No, my dear fellow, this is most *certainly* the surest method we can follow, no matter who we are.

CLINIAS: I trust you, sir, and I agree, so let's carry on with the discussion on that basis.

ATHENIAN: So it looks as if we have to compel the guardians of our divine foundation to get an exact idea of the common element in all the d
four virtues—that factor which, though single, is to be found in courage, restraint, justice and wisdom, and thus in our view deserves the general title 'virtue'. This element, my friends, if only we have the will, is what we must grip until we can explain adequately the essence of what we have to contemplate, whether it is a single entity, a composite whole, or both, or whatever. If this point eludes us, can we ever expect to attain virtue—when we can't say whether it comprises a great number of things e
or just four, or whether it is a unity? Never—not if we believe our own advice, anyway, and we'll have to ensure the growth of virtue in the state by some other means. But if in the circumstances we decide we ought to abandon the attempt entirely, abandon it we must.

CLINIAS: No, sir, in the name of the gods of hospitality, we must never abandon such a project: you seem to us to be absolutely right. So now then: how is one to tackle the problem?

ATHENIAN: Let's postpone the question of method. The first thing we 966
have to settle and decide among ourselves is whether the attempt should be made at all.

CLINIAS: Indeed it should, if possible.

ATHENIAN: Well then, do we take the same line about goodness and beauty? Should the guardians know no more than that both these terms are a plurality, or should they understand the senses in which they are unities?

CLINIAS: It looks as if they are more or less obliged to comprehend that too—how they are unities.

b ATHENIAN: But what if they understood the point, but couldn't find the words to demonstrate it?

CLINIAS: How absurd! That's the condition of a slave.

ATHENIAN: Well then, isn't our doctrine going to be the same about all serious questions? If our guardians are going to be *genuine* guardians of the laws they must have *genuine* knowledge of their real nature; they must be articulate enough to explain the real difference between good actions and bad, and capable of sticking to the distinction in practice.

CLINIAS: Naturally.

c ATHENIAN: And surely one of the finest fields of knowledge is theology, on which we've already lavished a great deal of attention. It's supremely important to appreciate—so far as it's given to man to know these things —the existence of the gods and the obvious extent of their power. The man in the street may be forgiven if he simply follows the voice of the law, but if any intended guardian fails to work hard to master every theological proof there is, we must certainly not grant *him* the same indulgence; in other words, we must never choose as a Guardian of the Laws
d anyone who is not preternaturally gifted or has not worked hard at theology, or allow him to be awarded distinctions for virtue.

CLINIAS: It's fair enough, as you say, that the idle or incompetent in this business should never be allowed to get anywhere near such honors.

ATHENIAN: Now we know, don't we, that among the arguments we've already discussed, there are two in particular which encourage belief in the gods?

CLINIAS: Which two are they?

ATHENIAN: One is the point we made about the soul, when we argued that
e it is far older and far more divine than all those things whose movements have sprung up and provided the impulse which has plunged it into a perpetual stream of existence. Another argument was based on the systematic motion of the heavenly bodies and the other objects under the control of reason, which is responsible for the order in the universe. No one who has contemplated all this with a careful and expert eye has in fact ever degenerated into
967 such ungodliness as to reach the position that most people would expect him to reach. They suppose that if a man goes in for such things as astronomy and the essential associated disciplines, and sees events apparently happening by necessity rather than because they are directed by the intention of a benevolent will, he'll turn into an atheist.

CLINIAS: Well, what would happen, in fact?

ATHENIAN: Today, as I said, the situation is quite different from the time when thinkers regarded these bodies as inanimate. Even then, men were
b overcome with wonder at them, and those who studied them really closely

got an inkling of the accepted doctrines of today, that such remarkably accurate predictions about their behavior would never have been possible if they were inanimate, and therefore irrational; and even in those days there were some[14] who had the hardihood to stick their neck out and assert it was reason that imposed regularity and order on the heavens. However, these same thinkers went sadly astray over the soul's natural priority to matter: regarding soul as a recent creation, they turned the universe upside c
down, so to speak, and their own theories to boot. They concluded from the evidence of their eyes that all the bodies that move across the heavens were mere collections of stone and earth and many other kinds of inanimate matter—inanimate matter which nevertheless initiated a chain of causation responsible for all the order in the universe. These views brought down on the philosophers' heads a great many accusations of atheism, and provoked a lot of hostility; poets, in particular, joined in the chorus of abuse and among other inanities compared the philosophers to bitches baying at the d
moon. But today, as I said, the situation is fundamentally different.

CLINIAS: How so?

ATHENIAN: No mortal can ever attain a truly religious outlook without risk of relapse unless he grasps the two doctrines we're now discussing: first, that the soul is far older than any created thing, and that it is immortal and controls the entire world of matter; and second (a doctrine we've expounded often enough before) that reason is the supreme power among the heavenly bodies. He also has to master the essential preliminary studies, e
survey with the eye of a philosopher what they have in common, and use them to frame consistent rules of moral action; and finally, when a reasoned explanation is possible, he must be able to provide it. No one who is unable 968
to acquire these insights and rise above the level of the ordinary virtues will ever be good enough to govern an entire state, but only to assist government carried on by others. And that means, Clinias and Megillus, that we now have to consider whether we are going to add yet another law to the code we've already expounded, to the effect that the Nocturnal Council of the Authorities, duly primed by the course of studies we've described, shall be constituted the legal protector of the safety of the state. Or is there some alternative course for us to take? b

CLINIAS: Oh, but my dear sir, there's no question of refusing to add this law, if we can manage it, even if our success is only partial.

ATHENIAN: Then let's make every effort to win the struggle. I've had a lot of experience of such projects and have studied the field for a long time, so I'll be more than happy to help you—and perhaps I shall find others to join me.

CLINIAS: Well, sir, we must certainly stick to the path on which—it is hardly an exaggeration to say—God himself is guiding us. But the question to which we need an answer at the moment is this: what will be the correct procedure on our part? c

14. Presumably Anaxagoras (mid fifth century) in particular. Cf. *Phaedo* 97b ff.

ATHENIAN: Megillus and Clinias, it is impossible to lay down the council's activities until it has been established. Its curriculum must be decided by those who have already mastered the necessary branches of knowledge—and only previous instruction and plenty of intimate discussion will settle such matters as that.

CLINIAS: How so? How are we supposed to understand *that* remark?

d ATHENIAN: First of all, of course, we shall have to compile a list of candidates qualified for the office of guardian by age, intellectual attainments, moral character and way of life. Then there's the question of what they have to learn. It is difficult to find out this for oneself, and it is not easy either to discover somebody else who has already done so and learn from him. Quite apart from that, it will be a waste of time to produce written regulations about the order in which the various subjects should be tackled and how long should be spent on each, because even the stu-
e dents, until they have thoroughly absorbed a subject, won't realize why it comes at just that point in the curriculum. So although it would be a mistake to treat all these details as inviolable secrets, it would be fair to say that they ought not to be divulged beforehand, because advance disclosure throws no light at all on the questions we're discussing.

CLINIAS: Well then, sir, if that's the case, what are we to do?

ATHENIAN: My friends, we must 'chance our arm', as the saying is. If we are prepared to stake the whole constitution on a throw of 'three sixes'
969 or 'three ones', then that's what we'll have to do, and I'll shoulder part of the risk by giving a full explanation of my views on training and education, which we've now started to discuss all over again. However, the risk is enormous and unique. So I bid you, Clinias, take the business in hand: establish the state of the Magnesians (or whatever other name God adopts for it), and if you're successful you'll win enormous fame; at
b any rate you'll never lose a reputation for courage that will dwarf all your successors'. And if, my good companions, if this wonderful council of ours can be formed, then the state must be entrusted to it, and practically no modern legislator will want to oppose us. We thought of our combined metaphor of head and intellect, which we mentioned a moment ago, as idealistic dreaming[15]—but it will all come true, provided the council mem-
c bers are rigorously selected, properly educated, and after the completion of their studies lodged in the citadel of the country and made into guardians whose powers of protection we have never seen excelled in our lives before.

MEGILLUS: My dear Clinias, judging from what we've heard said, either we'll have to abandon the project of founding the state or refuse to let our visitor leave us, and by entreaties and every ruse we can think of enroll him as a partner in the foundation of the state.

d CLINIAS: You're quite right, Megillus. That's what I'm going to do. May I enlist your help too?

MEGILLUS: You may indeed.

15. See 961d and 964e–965a.

EPINOMIS

As its name indicates, Epinomis *is an addition or appendix to the* Laws *(*Nomoi *in Greek). Clinias, Megillus, and the Athenian visitor reconvene at some unspecified time after their conversation in the* Laws. *Their purpose is to discuss the nature of wisdom—the copestone of human fulfillment and happiness—and, more particularly, the studies by which it is to be attained. Instruction in these must be given to the members of the governing Council of their proposed new city of Magnesia, charged as the Council is with knowing in detail the overall aim of law and how to maintain in perpetuity laws and practices that achieve it. At the end of the* Laws, *it was agreed that these matters could not usefully be explained in advance; the thing to do was actually to establish a city having the right laws, educate and select a Council, and leave to them the further legislation about their successors' education. Now, going back on that, the Athenian agrees to explain what the necessary studies are and to legislate about them. It turns out, surprisingly perhaps, that though certain preliminary studies are also needed, wisdom is constituted solely by the knowledge of astronomy—of the single, mathematically unified system of the constant movements of the heavenly bodies (assumed, of course, to be rotating round the earth). Knowing that, the Council members will know the principle of order needed to organize correctly the whole of human life, both individually and socio-politically.*

This discrepancy (and there are others) already suggests that Plato was not the author of this work. This is generally accepted in current scholarship. There is ancient testimony that its author was in fact Philip of Opus, who is also said to have 'transcribed' the Laws, *presumably from wax tablets in which Plato left the work at his death because he was still revising it. If so, it presents one of the first 'Platonisms', very close to Plato's own time, carrying forward the 'spirit' of Plato's work while giving selective and distorting emphases to various elements within it.*

J.M.C.

CLINIAS: My friend, all three of us—you, I and Megillus here—have 973
come to do what we agreed: to consider what account we ought to give in explaining the nature of wisdom, as well as to discuss the course of

Translated by Richard D. McKirahan, Jr. Text: L. Tarán, *Academica: Plato, Philip of Opus, and the Pseudo-Platonic Epinomis,* American Philosophical Society, Philadelphia, 1975.

studies that we say makes a person who engages in thought as wise as a
b human can be. And rightly so, since although we have set out in detail everything else that has to do with legislation, we have neither stated nor discovered the most important thing: what a mortal must learn in order to be wise. We must not abandon this now, since to do so would be to leave largely unachieved the goal of our labors, which was to make things clear from start to finish.

ATHENIAN VISITOR: That is a good idea, Clinias, but I fear you are about
c to hear an account that is strange, though yet in a way not strange: the human race is, as a rule, neither blessed nor happy. Many people, through their experience in life, offer this same account. Pay attention then and consider closely whether you find that I too, following them, am correct on this point. I claim that people cannot become blessed and happy; there are but a few exceptions to this rule. (I limit this claim to the duration of our lives. Those who strive to live as nobly as they can during their life and at their end to die a noble death have a good hope of attaining after
d they die everything for which they have striven.) I am not saying anything clever, but only what we all know in some way, both Greeks and foreigners: from the start the terms of life are harsh for every living thing. First we have to go through the stage of being embryos. Then we have to be born
974 and then be brought up and educated, and we all agree that every one of these stages involves countless pains. In fact, if we don't count hardships, but only what everyone would consider tolerable, the time involved turns out to be quite brief—a period round about the middle of a person's life, which is thought to provide a kind of breathing-space. But then old age quickly overtakes us and tends to make anyone who takes his whole life into account unwilling ever to go through life again, unless he is full of childish thoughts.

b What proof do I have of this? That what we are now investigating points in this direction. We are investigating how to become wise, as if this capacity were found in everyone. But it takes to its heels whenever anyone achieves any expertise in any of the so-called arts or branches of wisdom or in any of the other fields usually considered to be sciences—which suggests that none of them deserves the title of wisdom about these human concerns. On the other hand, while the soul is strongly convinced and
c divines that it is somehow its nature to have wisdom, it is wholly unable to find out what this is, and when and how it is attained. In these circumstances, isn't our difficulty about wisdom entirely appropriate, and our investigation as well? This turns out to be a larger project than any of us expect who are capable of examining themselves and others intelligently and consistently through arguments of all kinds and sorts. Shall we not agree that this is so?

d CLINIAS: Perhaps we shall, my friend, since over time we have come to share your hope that we may reach the full truth in these matters.

ATHENIAN: First we must go through all the other subjects that are called sciences but that do not make those who understand and possess them

wise. After getting these out of the way, we will try to identify the ones we need, and then learn them.

To begin, let us consider how it is that the sciences that have to do with the first needs of a mortal race are most necessary and truly first, but also e
how it happens that those who have knowledge of them, though in early times they were considered wise, nowadays are not reputed for wisdom, but rather are reproached for such knowledge. We shall identify them and 975
show that virtually everyone with an ambition for a reputation of having developed into as good a person as possible avoids them in order to acquire wisdom and practice it.

First there is the knowledge that has to do with animals' eating one another. The story goes that this is what has made it customary to eat some kinds of animals while entirely keeping us from eating others. May the men of former times be kindly to us, as indeed they are; but let the first persons we leave aside be the experts at the knowledge just mentioned. b
Next, the production of barley meal and wheat flour, in combination with the knowledge of how to use them for nourishment, though it is a noble and excellent pursuit, will never succeed in making anyone completely wise, since this very thing—labelling production as wisdom—would lead to disgust at the products themselves. Nor will cultivation of the entire earth make anyone completely wise: it is clearly not by art but by a natural capacity we have from God that we have all put our hands to working the earth. Moreover, neither will the "weaving together" of dwellings, or construction as a whole, or the art of making all kinds of furnishings and implements, which includes bronze-working, building, molding and c
weaving, as well as the manufacture of all instruments. This knowledge has practical utility for the masses, but it is not because it is thought to confer virtue that it is called knowledge. Nor does the art of hunting in all its various forms make anyone noble and wise, though it has come to have many forms and involves great skill. Nor do prophetic inspiration or the ability to interpret divine messages have this effect in the least. The prophet only knows what he says; he does not understand if it is true.

We now see that these arts enable us to possess the necessities of life, d
but that none of them makes anyone wise. Next in order is a kind of play, which is mostly imitative and in no way serious. Its practitioners make use of many instruments and many bodily gestures—and not wholly becoming ones at that. This includes skills that employ words, all the arts of the Muses, and the genres of visual representation, which are responsible for producing many varied figures in many media, both wet and dry. But the imitative art makes no one wise in any of these things, even those who practice their craft with the utmost seriousness.

Now that all these subjects have been dealt with, the next group turns e
out to be kinds of defense, which come in many different forms and which benefit many people. The chief and most widespread of these, the art of war, which is known as military strategy, has the highest reputation for utility, but requires the greatest amount of good luck and is granted to

976 people through courage more than wisdom. The art called medicine too is surely a defense, in this case against all the ravages the climate inflicts upon animals through cold, unseasonable heat, and other things of the sort. But none of these arts is distinguished for wisdom of the truest sort. They lack measure, are carried along by opinion, and proceed by guesswork. We will also call both sea-captains and sailors defenders, but no one should encourage us by proclaiming any single one of these men
b wise. No one could know the anger or friendship of the wind, even though the art of sailing would find this knowledge most agreeable. Nor are those men wise who claim to be defenders in lawsuits by virtue of their speaking ability. Their attention to people's characters is based on memory and rote acquaintance with opinion, and they stray wide of the truth about what is genuinely just.

As a candidate for the reputation of wisdom there still remains a certain strange ability, which most would call not wisdom, but a natural gift. Some
c people easily learn whatever they are learning and accurately remember a great number of things, and some can call to mind what is useful for each person—what would be fitting if it were to take place—and quickly bring it about. When we notice such people, some will regard all these traits as a natural gift, while others will call them wisdom and still others a natural agility of mind. But no intelligent person will ever be willing to call anyone genuinely wise for having any of them.

But surely there must turn out to be some science whose possession makes a wise person genuinely wise and not merely wise by reputation.
d Let us see, then. We are tackling an extremely difficult subject—to discover a different science from the ones we have discussed, one which may be both genuinely and plausibly called wisdom, and which will make its possessor neither vulgar nor foolish, but a wise and good citizen of his city, a just ruler and subject, and in tune with himself and the world as well. First let us identify this science. Of all the sciences that now exist, which one would render humans the most unintelligent and senseless of living things if it completely disappeared from the human race or had not
e been developed? In point of fact, it is not at all hard to identify. If we compare, so to speak, one science with another, we will see that the one that has given the gift of number would have this effect upon the entire mortal race.

It is God himself, I believe, and not some good fortune that saves us by making us this gift. But I must say which god I mean, though it will seem
977 strange, though yet in a way not strange. How can we keep from believing that what causes all things that are good for us is also the cause of the good that is by far the greatest, namely, wisdom? So, Megillus and Clinias, what god am I speaking of with such solemnity? Uranus (i.e., the heaven), the god whom above all others it is most just to pray to and to honor, as all the other divinities and gods do. We will unanimously agree that he has been the cause of all other good things for us. But we declare that he is really the one who gave us number too, and he will continue to give
b it, supposing that we are willing to follow him closely. If we come to

contemplate him in the right way—whether we prefer to call him Cosmos or Olympus or Heaven [Uranus]—let us call him as we like, but let us notice carefully how by decorating himself and making the stars revolve in himself through all their orbits, he brings about the seasons and provides nourishment for all. Together with the entirety of number, he also furnishes, we would insist, everything else that involves intelligence and everything that is good. But this is the greatest thing, for a person to receive from him the gift of numbers and go on to examine fully the entire revolution of the heavens.

Next, let us return to a point made a little while ago and recall that we c
were very right to observe that if the human race were deprived of number, we would never come to be intelligent in anything. We would be animals unable to give a rational account, and our soul would never obtain the whole of virtue. An animal that does not know two and three or odd and even, one that is completely ignorant of number, could never give an account of the things it has grasped by the only means available to it—perception and memory. But while nothing prevents it from possessing d
the remainder of virtue—courage and moderation—no one deprived of the ability to give a true account can ever become wise, and anyone lacking wisdom, which is the greatest part of all virtue, can never become completely good or, in consequence, happy. Thus it is altogether necessary to employ number as a basis, though why this is necessary would require a still longer account than all I have said. But we will also be right in stating the present point, that regarding the achievements attributed to the other arts, the ones we recently surveyed when we allowed all the arts to exist, e
not a single one remains. They are all completely eliminated when we take away the science of number.

If we reflect upon the arts, we might well suppose that there are a few purposes for which the human race needs numbers—although even this concession is important. Further, if we contemplate the divine and the mortal elements in the generated world, we will discover reverence for the divine and also number in its true nature. But even so, not every one 978
of us will yet understand either how great a power intimate knowledge of the whole of number can confer upon us (since in addition to what I have mentioned, all musical phenomena clearly require movement and sounds that are based on number), or—the most important thing—that number causes all good things. We must also understand well that it causes no evil that may occur. By contrast, movement that is irrational, disorderly, unseemly, unrhythmical and inharmonious is wholly lacking in number, as is everything that shares in any evil. This is how anyone who is going b
to die happy must think. And as regards justice, goodness, beauty, and all such things, without knowledge no one who has attained true opinion will ever give a numerical account that is at all likely to persuade either himself or anyone else.

Now let us go on to take up this very topic, number. How did we learn to count? How did we come to have the concepts of one and two? The c
Universe has endowed us with the natural capacity to have concepts,

whereas many other living things lack even the capacity to learn from the Father how to count. With us humans, the first thing God caused to dwell in us was the capability to understand what we are shown, and then he proceeded to show us, and he still does. And of the things he shows us, taken one by one, what can we behold more beautiful than the day? Later,
d when we come to see the night, everything appears different to our vision. Since Heaven never stops making these bodies ply their course night after night and day after day, he never stops teaching humans one and two, until even the slowest person learns well enough to count. For each of us who sees them will also form the concepts of three, four, and many. Out of these many, God made a unit by constructing a moon which goes through its course sometimes appearing larger and sometimes smaller,
e thus always revealing each day as different until fifteen days and nights have passed. This *is* a period, if one is willing to treat the entire cycle as a unit. As a result, even the stupidest of the animals God has endowed with the ability to learn is able to learn it. Every living being that can has become quite knowledgeable in numbers this far [i.e., up to fifteen] and
979 in these numbers, by considering each thing individually. Next, for the purpose of reckoning on each occasion all things in relation to one another as numbers[1] and also for a purpose which I regard as greater—after creating the moon, waxing and waning as we said, God established months in relation to the year, and so all the living beings who could began to comprehend number in relation to number, with the blessing of Good Fortune. Thanks to these celestial events we have crops, the earth bears food for all living things, and the winds that blow and the rains that fall
b are not violent or without measure. If on the contrary anything turns out for the worse, we must not blame God, but humans, for not rightly managing their own lives.

Now in our inquiry about Laws we found that the other things that are best for humans are easy to know, and that we are all competent both to understand what we are told and to act on that basis, as long as we know what is likely to be advantageous and the reverse. Indeed, we found then
c and we still maintain that none of the other pursuits is particularly difficult, but how to become good people is an extremely difficult problem. Also, to acquire everything else that is good—property in the right amount and a body of the right sort—is, as the saying goes, both possible and not difficult. Further, everyone will grant that the soul should be good, and as to how it should be good, everyone says it must be just, moderate, brave, and wise as well. But when it comes to the precise form of wisdom
d it must have, as we have recently shown in detail, there is no longer any agreement, at least among the many. But as a matter of fact we have just now discovered over and above all the former kinds of wisdom one that is by no means insignificant, at least in that anyone who masters the material we have outlined is guaranteed a reputation for wisdom. But are

1. Thus extending the concept of number to include ratios.

those who know these things really wise and good? This is precisely what requires a satisfactory account.

CLINIAS: How right you were, my friend, to say that you were setting out to say important things on important subjects!

ATHENIAN: Indeed, they are not trivial, Clinias. But—and this is even e
more difficult—I am attempting to say things that are wholly and universally true.

CLINIAS: I agree completely. But even so, please don't get weary of telling me your ideas.

ATHENIAN: Of course, but don't you two get tired of listening, either.

CLINIAS: Don't worry—and I am speaking on behalf of the two of us.

ATHENIAN: Very well. We must begin from the beginning. In the first 980
place, it appears that above all we must find a single name, if we can, for this thing we hold to be wisdom. If we simply cannot do this, our second objective will be to determine what and how many kinds of wisdom a person must know in order to be wise according to our account.

CLINIAS: Please go on.

ATHENIAN: The next point is that no one can blame the lawgiver for fashioning an account of the gods that is finer and better than those given up to now, engaging, so to speak, in noble play and honoring the gods, and b
for him to pass his whole life celebrating them with hymns of happiness.

CLINIAS: Well said, my friend! I hope that this is the goal of your laws, that people will sing hymns to the gods and live purer lives, and then meet with the end that is at once best and finest.

ATHENIAN: What are we saying, then, Clinias? Does it seem that by singing hymns to the gods we are honoring them greatly, praying that we will be led to say the finest and best things about them? Is this what you mean, or something else?

CLINIAS: Precisely that. But pray to the gods with confidence and state c
the account that it occurs to you to offer about the fine things that concern the gods and goddesses.

ATHENIAN: This will happen if God himself guides me. Only please join in my prayer.

CLINIAS: Please go on to the next point.

ATHENIAN: Since people in the past have failed badly in describing the generation of gods and living things, it appears that I must begin by constructing an account based on my previous one, taking up again my d
attack on impious accounts,[2] and declaring that there are gods who care for all things, great and small, who are inexorable in matters of justice. I suppose you remember, Clinias, since you have even received a written record. What we said then was quite true. The most important point was that as a whole, soul is older than any body. Do you recall? You surely must remember. For what is superior, older and more godlike is obviously e
so in relation to what is inferior, younger and less honorable, and what

2. *Laws* x; for the point noted just below, see 891e ff., 896a ff.

rules or leads is in every way older than what is ruled or led. Let us accept
981 this point, then, that soul is older than body. But if this is so, the first step in our first account of generation will be more plausible. Let us take it, then, that the beginning of our beginning is more seemly and that we are taking exactly the right steps in approaching the most important part of wisdom, the generation of gods.

CLINIAS: Anyone must grant that we are stating these matters the best we can.

ATHENIAN: Next, when a soul and a body come together to form a single structure and produce a single form, do we assert that this is most truly said to be a living thing, in virtue of its nature?

CLINIAS: Yes.

b ATHENIAN: So this kind of thing is most correctly called a living being?

CLINIAS: Indeed.

ATHENIAN: We must identify solid bodies, five in number on the most plausible account, from which the things that are finest and best can be fashioned. The remaining kind of entity, all of it, has but a single form, for soul, the truly most divine type of entity, is the only thing that could possibly have no body or be without any color at all. This is the only entity
c naturally suited for fashioning and creating, while body, we maintain, is suited for being fashioned, for becoming, and being seen. The former type (let us say it again, since it should not be stated just once) is naturally suited to be invisible, and intelligent and intelligible as well, sharing in memory and calculation that involves the vicissitudes of odd and even. There being five bodies, then, we declare that they are fire, water, air, earth, and ether, and that each of the many and varied kinds of living things is brought to perfection with one of these playing the chief role.

But we need to learn this for each kind individually, as follows. As the
d first kind we discuss, let us take up the earthy one. This includes all humans, and in addition all living things with many legs and those with none, and all that move and the ones that are stationary, held fast by roots. What makes this a single kind, we should believe, is the fact that although all kinds of living beings are composed of all the five bodies, the greatest part of this kind is made of earth with its solid nature.

We ought further to suppose there is a second, different kind of living thing that comes to be and moreover is visible. Its largest portion is fire,
e but it has portions of earth and air along with small amounts of all the rest. This is why we should declare that from these bodies arise visible living things of all kinds. We must further suppose that the kinds of living things in the heavens—which is what we should claim the divine stars to be—have come to be, endowed with the finest body and the best and happiest soul. But as to their destiny, which might be either of two sorts, we must allow opinion a role. Either they are all entirely and of absolute
982 necessity indestructible, immortal and divine, or else each of them is content to possess such a vast length of life that they could never possibly demand more.

To repeat, let us first suppose that these are two kinds of living things, that both are visible, the one made entirely, as it might seem, of fire, the other of earth, and that the earthy kind moves in disorder, while the one of fire moves in perfect order. Now what moves in disorder (which is exactly how the kind of living things around us behaves for the most part) we ought to consider unintelligent. But if something has an orderly path b
in the heavens we should treat that as powerful evidence of its intelligence. For if it always proceeds in its course uniformly and without variation, and always acts and is affected in the same way, it gives ample evidence of intelligent life. The necessity of the soul that possesses intelligence is far the most powerful of all necessities. For it is a ruler, not a subject, and so ordains its decrees. When a soul reaches the best decision in accordance c
with the best intelligence, the result, which is truly to its mind, is perfectly unalterable. Not even adamant could ever be mightier or more unalterable. Truly, three Fates hold fast whatever has been decided through the best counsel by each and all of the gods, and guarantee that it is brought to pass. Humans should admit as evidence of the intelligence of the stars and this entire movement of theirs, the fact that they always do the same things, because they are doing what was decided an astonishingly long time ago and do not change their decision back and forth, sometimes doing d
one thing and at others doing something else, wandering and changing their orbits. This opinion of ours is the exact opposite of what most people believe—that because they do the same things uniformly they do not possess soul. The crowd has followed the fools in supposing that the human race is intelligent and alive because it undergoes change, whereas the divine is unintelligent because it remains in the same orbits. But in fact anyone could have adopted views that are finer, better and acceptable, e
and could have understood that whatever always operates uniformly, without variation, and through the same causes is for that very reason to be regarded as intelligent. Such a person could also understand that this is the nature of the stars, the finest of all things to behold, and further that moving through their march and dance, the finest and most magnificent dance there is, they bring to pass what all living things need.

In fact, we are right to say they possess soul. First, consider their size. 983
They are not as small as they appear; the mass of each is inconceivably large. This point should be accepted with confidence since it is based on adequate proofs. For we can correctly reason that the sun is larger than the earth, and indeed, all the moving stars have an amazing size. How can any being cause so vast a mass to revolve always in the same period? I declare that God is the cause and that it could never be otherwise. For b
nothing could ever come to be alive except through God, as we have shown. And since God is capable of this, it is perfectly easy for him first to make any body and any mass of material into a living being and then make it move however he thinks best. I hope the single account I am now stating may hold true for them all. Unless a soul is attached to each of them or even *in* each, earth, heaven and all the stars and all the masses made c

of these things cannot move with such precision in their annual, monthly and daily courses, making all that takes place turn out good for us all.

Since man is so sorry a thing, it is important to avoid speaking nonsense and to be clear in what we say. If anyone is going to identify as causes certain bodies in rushing movement, or kinds of matter or anything of the sort, he will not succeed in saying anything clear. As for the account we
d have given, we really must take it up again, to see whether it is reasonable or wholly deficient. We hold first that there are two kinds of entities, soul and body, and many individuals of each kind, each one different from others of its kind and from those of the other kind, and there is no third kind of entity found in anything. Second, that soul is superior to body: we shall hold that the former is intelligent, the latter not, the one rules, the other is ruled, the one is the cause of everything, the other the cause of nothing that takes place. And so it is the height of folly and absurdity
e to say that the things in the heavens have arisen through the agency of anything else and are not the products of both soul and body, as we hold. If our theories about all the celestial beings are to win out, and if it is to appear convincing that they are all divine, we must suppose them to be one of two things. Either they are themselves gods and it is perfectly correct to celebrate them in hymns, or we must suppose them to be likenesses of
984 gods, something like images of them, made by the gods themselves, for their creators were not unintelligent or of little worth. As we have declared, we must suppose them to be one of these two things, and once we do this, we must honor them above all images. Assuredly no other image will ever appear more beautiful or more widely shared by all humans than these, let alone established in better locations or surpassing them in
b purity, awe, and their whole manner of life, since they have been made superior in all these ways.

Concerning the gods let us go no further. Now that we have identified the two kinds of living things that are visible to us, of which we declare that one is immortal, while all the other, the earthy kind, is mortal, let us try with the greatest accuracy that plausible opinion permits to describe the three intermediate kinds which fall in between the two already discussed. After fire let us take up ether. We may suppose that soul fashions
c living things out of it which (like the other kinds of living things) are for the most part characterized by that substance, but which also possess smaller amounts of the other kinds in order to bond them together. After ether, soul fashions a different kind of living things out of air, and a third out of water. After creating them all, it is plausible that soul filled the entire heaven with living things, employing each according to its character, since all share in life. These are the second, third, fourth and fifth kinds
d of living things, beginning from the visible gods and ending up with us humans.

As to the gods—Zeus, Hera and all the rest—we may legislate as we like, the same law holding for each, and we must treat this principle as

firmly established. But as to the first gods, those that are visible, greatest, most honored, and most sharply seeing everywhere, we must declare that these are the stars together with all the celestial phenomena we perceive. After them and next in order beneath them are *daimons*. The kind made of e
air, which occupies the third, middle, position, is responsible for mediation between gods and humans, and should be highly honored in our prayers for bringing words of good tiding. Both these kinds of living beings—the one made of ether and the next in order, the one made of air—are wholly imperceptible. Even when they are close by we cannot see them. They have a wonderful intelligence, being of kinds that learn quickly and have 985
good memories, and we should say that they know all our thoughts and both love those of us who are noble and good and hate those who are extremely evil, since already with these kinds we are discussing beings that experience pain. (By contrast, God, who enjoys the perfection of divine nature, is removed from pain and pleasure, and is entirely occupied in thinking and knowing.) Since the heaven is completely filled with living b
beings, we should say that they communicate with one another and with the highest gods about all humans and all other things. They do so through the movements of the middle ranks of living beings, which are wafted lightly towards the earth and also towards the whole heaven. It would be correct to represent the fifth kind of living thing, that made of water, as a demigod made of that substance, sometimes seen, sometimes hidden and invisible, provoking wonder through its dim appearance. c

These five kinds of beings really are living things, and some of them have had various types of encounters with humans, whether through dreams in sleep or in audible communications through divine voices or prophecies to certain people whether healthy or ill or even at the point of death. The resulting beliefs affect both individuals and communities and have been the origin of many religious rites for many people and will be in the future as well. Anyone who legislates on all these matters and has even the least intelligence will never dare to make innovations and turn his own city towards a piety which lacks any clear foundation. On the d
other hand, in his complete lack of knowledge he will not forbid what ancestral law has declared about sacrifices, since it is impossible for mortals to have knowledge about such things.

On the same reasoning, the worst people are those that do not dare to declare to us the gods that really do appear to us, or to reveal them as being other gods, ones who do not receive worship or the honors they are due. But in fact, this is exactly what is taking place. It is as if at some point e
one of us had seen a sun or a moon coming into existence and looking down at us all, and through some inability failed to report it, and further was not eager to do his part to bring them from their dishonored state into a place of honor and make them conspicuous, and also to institute festivals and sacrifices for them and to determine their periods of longer or, in several cases, shorter years, setting apart a time for each of them. 986

Wouldn't such a person himself, as well as anyone else who was aware of the situation, agree that it would be right to call him evil?

CLINIAS: Absolutely so, my friend, most evil.

ATHENIAN: But, my dear Clinias, I want you to know that this is precisely my situation now.

CLINIAS: What do you mean?

ATHENIAN: There are eight powers [i.e., orbits] of the celestial beings, that are brothers of one another. I myself have observed them. This is no
b special accomplishment; others can do it easily too. Three of them are the ones we mentioned a little while ago:[3] those belonging to the sun, to the moon, and to all the stars. But there are five more. Now regarding all these orbits and the beings which move in them (whether they move of their own accord or proceed in their courses borne on chariots), none of us must ever rashly suppose that some of them are gods and others are not or that some are legitimate while others are what it is wrong for any of us even
c to utter. Instead, we must declare and assert that they are all brothers and have brothers' shares. We must not attribute the year to one of them and the month to another, while refusing to assign to the rest any share or any time in which it completes its own orbit, contributing to the perfection of the visible cosmos established by the most divine law of all.

Anyone who is happy began by being struck with awe at this cosmos, and then conceived a passion for learning all that a mortal can, believing
d that this is how to live the best and most fortunate life and that when he dies he will go to places where virtue is at home. Further, once he is really and truly initiated and has achieved perfect unity and a share of the one true wisdom, he continues for the rest of his days as an observer of the fairest things that sight can see.

e The next thing is to say how many and who these gods are. For we must make it clear that we never go back on our word. In fact, I insist with certainty on just the following. I repeat that they are eight, and of the eight, three have been discussed and five still remain. The fourth orbit and period of revolution and the fifth as well are nearly equal in speed to the sun, neither faster nor slower overall. Of these three, the one with sufficient intelligence must be the leader. These three orbits belong to the sun, the morning star, and a third body which I cannot call by name since its name is not known. The reason is that the first person to observe them
987 was a foreigner. Egypt and Syria have a marvelously beautiful summer season. In consequence it was an ancient practice there that led people to reflect on these matters for the first time. They were always observing the entire totality of the visible stars, as it were, since their part of the world has no clouds or rain. From there, after being closely examined for thousands of years, in fact an infinite time, this knowledge spread everywhere including Greece. Therefore we must be bold and enact this into law. It is clearly not for people of intelligence to hold some divine things in dishonor and

3. 978c–979a.

others in honor. As to why they have not got names, this is the reason b
that should be given. Instead, they have taken as their appellations the
names of [the traditional] gods. The morning star, which is also the evening
star, is accounted as Aphrodite's star [i.e., Venus], a name highly appro-
priate for a Syrian law-giver to choose. The star that more or less accompa-
nies both the sun and Aphrodite's is Hermes' [Mercury]. We have yet to
speak of three more orbits that move to the right[4] like the moon and the
sun. But we should mention one, the eighth, which above all should be
called the cosmos. It moves in the opposite direction to all the others and
carries them, as should be obvious even to humans who know a little
about these things. But all that we know well we must tell, and we are c
telling it. For to anyone with even a small amount of understanding that
is correct and divine, what is genuinely wisdom appears to be somewhat
along these lines. Of the remaining three stars, one is particularly slow,
and some call it by the name "Cronus' " [Saturn]. The next slowest we
should call Zeus' [Jupiter], and the next one Ares' [Mars]; this one has the
reddest color of them all. None of this is hard to comprehend if someone d
explains it, but once a person learns it, we say, he must believe it.

Every Greek ought to bear in mind that the location we Greeks possess
is absolutely best for virtue. Its merit is that it is intermediate between
winter and summer. Since our summer is inferior to the summer in those
other places, as we said, we were late in coming to observe the ordering
of these gods. But let us take it for granted that whatever Greeks receive
from foreigners they improve in the end—a point that we must suppose e
holds for the present subject in particular. In fact, it is difficult to find out
all these things for certain, but there is high and good hope that even 988
though the tradition about all these gods and also their worship have come
from abroad, the Greeks, on account of their forms of education, the oracles
from Delphi, and their whole legally codified system of worship, will
succeed in worshiping them better and in a real sense more justly.

Let no Greek ever fear that being mortal we should never concern
ourselves with the divine. We should have quite the opposite thought; the
divine [i.e., the cosmos] is never without intelligence nor is it at all ignorant b
of human nature, but it knows that if it teaches we will follow along and
learn what we are taught. And of course it knows that the very thing that
it teaches us and that we learn is number and how to count. If it did not
know this it would be the least intelligent thing of all. It would really not
"know itself," as the proverb goes, if it were angry at those who are able
to learn and did not instead rejoice without envy along with the ones who
become good through God's help.

Now it makes much good sense that when humans first had thoughts c
about how the gods came to be and what they were like and what deeds
they did once they came to be, what they said was not acceptable or
pleasing to sensible people. Nor were the later accounts, in which fire,

4. I.e., from West to East.

water and the other bodies were declared oldest and the wonderful soul younger, and which also maintained that that motion was superior and more valuable which belongs to body and which body produces in itself by heat, cold, and all things of that sort, and that the soul does not move
d both body and soul itself. But now, when we say that it is no surprise that if a soul comes to be in a body it causes both the body and itself to move and revolve, on no account does our soul disbelieve that it has the capacity to make any weight revolve, no matter how large. Therefore, since as we now claim, soul is the cause of the whole cosmos, and all good things have causes that are good, while evil things have different causes, which
e are evil, it is no wonder that soul is the cause of every orbit and motion, and the best kind of soul causes orbits and motions that tend toward the good, while the opposite kind of soul causes those that tend toward the opposite. It follows that the good must always have defeated and must always defeat the evil.

All that we have said is in accord with Justice, who takes vengeance on the unholy. Consequently, getting back to the object of our investigation,
989 we cannot but believe that the good person, at least, is wise. But as for the wisdom for which we have long been searching, let us see whether we can discover any discipline or art such that ignorance of it would make us lack all judgment about justice. In fact, I think we can. Let me say what it is. I shall try to make clear to you how it dawned upon me as I searched high and low. The cause of our failure is that we do not practice the most
b important part of virtue in the right way. What I just said seems to me to indicate this strongly. For no one will ever persuade us that there is a more important part of virtue for mortals than reverence towards the gods, although it must be admitted that through ignorance of the worst kind this quality has been absent from the people with the best natures.

Such natures hardly ever occur, but if they do they are an outstanding benefit. For a soul that possesses both quickness and slowness in a mild and moderate degree will tend to be good-natured. It will be inclined towards courage, readily induced to moderation, and—the most important
c feature in such cases—since it will be good at learning and remembering, it can greatly enjoy these activities, and so will have a love of learning. These are not easily produced, but when they are born and are nurtured and trained in the necessary way, it is absolutely right for such people to be able to hold the inferior majority in subjection by thinking, doing and saying all that concerns the gods in the right ways at the right times, not hypocritically performing sacrifices and purification rites for violations
d against gods and humans, but in truth honoring virtue. In fact, honoring virtue is the single most important thing for the entire city. Now we hold that this segment of the population is by nature best suited to authority and is capable of learning the noblest and finest studies, if anyone will teach them. But no one could do so unless God leads the way. Indeed, if someone were to teach, but not in the right way, it would be better not to learn. Even so, it

follows from what I am now saying that people with this kind of nature, the best, must learn these things and that I must tell them to.

I must try, then, to give a detailed account of what those things are, e
what they are like, and how to learn them, given my ability as a speaker
and the ability of those who can hear me: what things a person is to learn 990
about reverence towards the gods and how he is to learn them. When you
hear what it is, you will find it strange. I say its name is astronomy, an
answer no one would ever expect through unfamiliarity with the subject.
People do not know that the true astronomer must be the wisest person.
I do not mean anyone practicing astronomy the way Hesiod did and
everyone else of that sort, by observing risings and settings of stars, but
the one who has observed seven of the eight circuits, each of them complet-
ing its own orbit in a way no one can easily contemplate who is not b
endowed with an extraordinary nature. We have now said what we must
learn. We shall go on to state, as we say, how we must and should learn
it. My first point is the following.

The moon completes its circuit most quickly, bringing the month [the new moon] and before it the full moon. Next we must attain knowledge of the sun, which brings the solstices as it completes its entire circuit, and then the planets that accompany it [i.e., Venus and Mercury]. To avoid repeating ourselves many times about the same things, since the remaining c
orbits which we discussed earlier are not easy to understand, we should make continuous efforts in preparing for this knowledge the people whose natures can understand it, to teach them many preliminary subjects and accustom them to learning when they are boys and youths. For this reason they need to study mathematics.

First and foremost is the study of numbers in their own right, as opposed to numbers that possess bodies. This is the study of the entire nature and properties of odd and even—all that number contributes to the nature of existing things. After learning this, next in order is what goes by the d
extremely silly name of geometry [literally, "earth measurement"]. In fact, it is absolutely clear that this subject is the assimilation by reference to plane surfaces of numbers that are not by nature similar to one another. That this miracle is of divine, not human origin should be obvious to anyone who can understand it. After this is the study of numbers with three factors, which are similar in virtue of their nature as solids. Another art, called stereometry by those acquainted with it, assimilates numbers e
that are dissimilar. But what people who look into these matters and understand them find divine and miraculous is how nature as a whole molds sorts and kinds according to each proportion, with reference to the power that is always based on the double and the power opposite to this 991
[the half]. The first sequence of the double is the one carried out in numbers in the ratio one to two [i.e., the sequence 1, 2, 4, . . .]. The sequence determined by squares [sc. of these numbers: the sequence 1, 4, 16, . . .] is the double of this. Double of *this* is the one [the sequence 1, 8, 64, . . .] that

reaches what is solid and tangible, after proceeding from one to eight.[5] The sequence that gives the mean of the double involves both the mean that exceeds the smaller and is exceeded by the larger by an equal amount [i.e., the arithmetic mean], and the mean that exceeds one of the extremes by the same fraction of that extreme as the fraction of the other extreme by which it is exceeded by that extreme [i.e., the harmonic mean].
b (The means of 6 in relation to 12 are determined by the ratios 3:2 and 4:3.)[6] The sequence based on both of these means has been granted to the human race by the blessed choir of the Muses and has bestowed upon us the use of concord and symmetry to promote play in the form of rhythm and harmony.

Let us take it that all these things are as we have said. But what is the point of learning them? To ascertain this we must refer to the divine element in the generated world, which consists of the finest and most divine sort of visible things God has permitted humans to observe. No
c one who has observed them can ever claim to have learned them in any easy way that does not involve the sciences that I just described. In addition, in all our discussions we must fit the individual to the species by asking questions and refuting errors. This method is the first and finest touchstone for humans to use, whereas all the tests that are not genuine but pretend to be so involve everyone in totally useless labor. We must also have an
d accurate knowledge of how time brings to pass all celestial events precisely. If we do, then everyone who has confidence in the truth of our account that soul is both older and more divine than body should believe that the saying "all things are full of gods" is entirely right and sufficient, and further that we are never slighted through the forgetfulness or neglect of our superiors.

In all these studies, though, the following point must be kept in mind: anyone who comprehends each of them through the right method is greatly benefited in doing so; otherwise, it is better to call on God for help. The
e right method is this—I must say this much at least. To the person who learns in the right way it will be revealed that every diagram and complex system of numbers, and every structure of harmony and the uniform pattern of the revolution of the stars are a single thing applying to all these phenomena. And it *will* be revealed to anyone who learns correctly, as we
992 say, fixing his eye on unity. To one who studies these subjects in this way, there will be revealed a single natural bond that links them all. But anyone who is going to pursue these studies in any other way must "call on Good

5. This last sequence, formed by cubing the numbers in the first sequence, represents three dimensions, the "solid and tangible." (Likewise, the first and second sequences represent one and two dimensions, respectively.) In reaching it, we have passed through the previous two sequences; that is, the generation of three dimensions presupposes that of one and two dimensions.

6. The arithmetic mean of 6 and 12 is 9, the harmonic mean is 8, and 9:6 = 3:2 and 8:6 = 4:3; also 12:9 = 4:3 and 12:8 = 3:2.

Fortune for help," as we say too. For without them, no one in cities will ever become happy. This is the right way, this is the upbringing, these are the studies. Whether they are difficult, whether they are easy, this is the way we must proceed.

It is not right to neglect the gods once it is obvious that our story about them all has been told in the right way and blessed by Good Fortune. b
Anyone who has grasped all these things in this way I say is truly the wisest. I maintain also, both in jest and in earnest, that when any of these people fulfills his destiny by dying (if indeed he still exists in death), he will no longer be affected by a multitude of perceptions as he is now but will participate in a destiny of unity. Having become one from many, he will be happy, most wise, and blessed—whether in his blessed state he dwells on continents or islands [the Isles of the Blest]—and he will enjoy c
this fortune forever. And whether he lives his life engaging in these pursuits in private or in public, the gods will grant him to experience the same things in the same way. But as to what we asserted at the outset, the identical account is now at hand again, and it is genuinely true—that with but a few exceptions, humans are incapable of becoming perfectly blessed and happy. This has been stated correctly. Only those who are by nature godlike and moderate, who also possess the rest of virtue, and have under- d
stood all the subjects connected with the blessed science [astronomy] (and we have stated what these are) have obtained and possess all the gifts of the divinity in adequate measure.

In private we say and in public we enact into law that the highest offices must be bestowed upon those individuals who have mastered these studies in the right way, with much labor, and have arrived at the fullness of old age. The others must obey them and speak in praise of all gods and goddesses. Now that we have come to know this wisdom well enough and have tested it, we are all bound, most rightly, to urge the Nocturnal e
Council to pursue it.

LETTERS

The biographer Diogenes Laertius tells us that Thrasyllus included in his edition of Plato thirteen letters alleging to have been written by him. These are the letters presented here, in Thrasyllus' numbering. Apart from two insignificant ones indicating no presumed date, they all profess to be from the last two decades of Plato's life. Most of them show him deeply and personally involved in the politics of Syracuse, the most important Greek city of Sicily, then engaged in a protracted struggle with Carthage to preserve Greek hegemony in the island, or at least its eastern half. The general Dionysius had established himself as 'tyrant' of the previously democratic Syracuse, being succeeded in 367/6 by his son Dionysius II, to whom Letters *I, II, III, and XIII are addressed. Plato had visited the court of Dionysius I in about 387, and according to these* Letters *he had formed a close friendship there with the tyrant's young brother-in-law, Dion—later an influential figure in his government—of whose intellectual and moral qualities he held a high opinion. According to the account of* Letter *VII, by far the longest and most interesting of the series, Dion shared Plato's ideals of government—presumably those expressed in* Republic. *With the accession of the younger Dionysius, a young man who showed an interest in philosophical matters, Dion saw an opportunity, with the help of Plato's instruction in philosophy, to win Dionysius over to abandoning his tyranny for a rule of the 'best' laws under free institutions. Thus—still according to the* Letters*—Plato returned to Syracuse in 367 or 366 to carry out his and Dion's purpose of establishing there the magnanimous rule of a 'philosopher-king'. But Dionysius proved less tractable than Dion had expected; within four months, fearing him as a rival, he banished Dion to Greece, and Plato himself returned to Athens not long afterwards, the grand project a shambles. He came back a third time some four years later, at Dionysius' urging, in the hope at least of restoring Dion to Dionysius' good graces. At that too he failed. The rest of the story—Dion's successful expedition to take Syracuse in 357, effectively ending Dionysius' rule, and his eventual murder in 354 in the factional fighting that ensued—can be read in Plutarch's* Life of Dion.

Are these letters, or any of them, genuine? We have no way of knowing for sure. We have no record of any Platonic letters existing before the end of the third century B.C., *some one hundred fifty years or more after the nominal date of composition. We know that many such 'letters' of famous personages originated as exercises in the schools of rhetoric in later times, and others were forged for various reasons. Our manuscripts report a doubt (perhaps going back to Thrasyllus) about* Letter *XII's authenticity, and from their content*

others can hardly be by Plato. Letter *VII, the least unlikely to have come from Plato's pen, contains much tantalizing information about Plato's views about philosophy which if genuine could be of some significance for working out his final positions. The author reiterates in bold language his commitment to Forms, and, drawing upon an elaborate theory about the means of arriving at philosophical truth and the defectiveness of language to express it, he explains why he would never write any philosophical treatise. If not by Plato,* Letter *VII must have been written about when it says it was—not long after Dion's death in 354—and by someone close enough to Plato to be confident of writing about philosophy in a way that could convince a discriminating audience that included Greek philosophers in Southern Italy that the author was indeed Plato.*

J.M.C.

I

PLATO TO DIONYSIUS, WELFARE. 309

During all the time that I was with you administering your empire and enjoying your confidence above all others, you got the benefits and I the slanders. But I endured them, grievous as they were, because I knew that men would not think me a willing accomplice in any of your more barbarous acts. For all who are associated with you in your government are my b
witnesses, many of whom I myself have defended and saved from no little injury. And although I have held the highest authority and have protected your city on numerous occasions, you have deported me with less consideration than you ought to show in sending away a beggar who had been with you for the same length of time. I shall therefore in the future consult my own interests with less trust in mankind, and you, tyrant that you are, will live without friends.

The bearer of this letter, Bacchius, is bringing you the pretty gold that c
you gave for my departure. It was not enough for my traveling expenses, nor could I use it for any other need. The offer of it did you great dishonor, and its acceptance would do me almost as much, therefore I refuse it. No doubt it makes little difference to you whether you get or give such a trifle as this, so take it back and use it to serve some other friend as you have served me; I have had enough of your attentions.

A line of Euripides comes appropriately to my mind: "Thou'lt pray for d
such a helper at thy side."[1] Let me remind you also that most of the other tragic poets, when they bring in a tyrant who is being assassinated, make him cry out: "O wretched me! for lack of friends I die." But no one has 310

Translated by Glenn R. Morrow.

1. Frg. 956.

ever portrayed him as dying for lack of money. And these other lines, too, make sense to sensible men:

> *It is not gold, though a shining rarity in mortals' hopeless life,*
> *Nor gems, nor silver couches, that brighten the eyes of men,*
> *Nor broad and self-sufficient fields laden with the harvest,*
> *But the approving thought of upright men.*

b Farewell. May you realize how much you have lost in me and so conduct yourself better toward others.

II

PLATO TO DIONYSIUS, WELFARE.

Archedemus[1] tells me you think that not only I but my friends also should keep quiet about you and refrain from saying or doing anything to your discredit, Dion alone excepted. This very statement, that you except c Dion, shows that I have no power over my friends; for if I could control you and Dion and the others as you suggest, it would be much better for us, I maintain, and for all the other Greeks. As it is, I am conspicuous in showing willingness to follow my own precept. But I say this without implying that there is any truth in the reports of Cratistolus and Polyxenus, d one of whom told you, I hear, that while at Olympia he heard many of my companions speak ill of you. He must have much sharper hearing than I, for I heard nothing of the sort. But this is what you must do, I think, in the future; whenever you hear anything like this said of one of us, write and inquire of me, and I will tell you the truth without shame or hesitation.

So far as the relations between you and me are concerned the situation e is this. We are both known to practically every Greek, and our connection with each other is no secret. Remember, too, that it will be no secret to future generations, for those who hear of it will be as great in number as our friendship has been long continued and open. What do I mean by saying this now? Let me begin with a general truth. It is a law of nature that wisdom and great power go together; they exert a mutual attraction and are forever seeking to be united. And men love to converse with one another about them, and to listen to what the poets say. For example, 311 when men talk of Hiero and Pausanias the Lacedaemonian, they like to recall Simonides' connection with them and what he said and did. Likewise they usually celebrate together Periander of Corinth and Thales of Miletus, Pericles and Anaxagoras, and again Croesus and Solon, as wise men, with

1. See *Letters* III, 319a, and VII, 339a, 349d.

Cyrus, as ruler. In the same strain the poets couple Creon and Tiresias, b
Polyeidus and Minos, Agamemnon and Nestor, Odysseus and Palamedes.
And our early ancestors, if I am not mistaken, linked Prometheus with
Zeus in much the same manner. Of these men some are sung about as
coming together in conflict, others for friendship; and some as being friends
at one time and enemies at another, and agreeing in some things and
disagreeing in others. I say all this to show you that when we are dead, c
men will still talk about us, and we must have a care for their opinions.
It is necessary, I think, that we should be concerned about the future, since
it is the nature of an utterly slavish man to give it no thought, whereas
men of superior virtue do everything in their power to have themselves
well spoken of after they are dead. This very attitude is to me an indication
that the dead have some perception of what is going on here; for superior
minds divine that this is so, while those of no account deny it; and of these d
two the intimations of good men are the more worthy of credence. It is
my belief that the men whom I have mentioned above would be only too
eager, if it were possible to rectify their associations with one another so
as to have a better account given of them than is now current. This is still
possible for us, please God; if there has been any fault in our past relations
we can still correct it by our words and actions; for the account which will
be given of true philosophy, and the reputation that it will enjoy, will be e
better or worse, I say, according as we act nobly or basely. Indeed we can
show no greater piety than to act always with this concern, nor greater
impiety than to neglect it.

Shall I tell you then what we ought to do and what justice requires?
When I came to Sicily my reputation was high among philosophers, and
I came to Syracuse to make you my witness, so that philosophy might 312
gain favor with the multitude. In this I failed ingloriously, as is well known.
But I deny that the cause was what many persons might think. Instead,
it is because you showed that you did not quite trust me, but desired to
send me away and summon others to find out from them what my purposes
were, apparently mistrusting me. Many people thereupon bruited it about
that you held me in contempt and were interested in other things. This, b
as you know, was the general report. Hear now what in consequence you
ought to do, and this will answer your question how you and I should
behave towards each other. If you feel nothing but contempt for philoso-
phy, then let it alone; or if from your own studies or from the teachings
of others you have found better doctrines than mine, give them your
allegiance. But if, as I think, you favor my principles, then you ought to
honor them and me in particular. Now, as at the beginning, if you lead I
will follow. If you honor me, I will honor you; if not, I will keep silent. c
Furthermore, if you take the lead in honoring me, you will get the reputa-
tion of honoring philosophy; and the very fact that you once were consider-
ing other philosophers will bring you commendation from many persons
as being yourself a philosopher. But if I pay you honor without any honor

from you, it will look as if I had my eyes on your money, and we know that this attitude has an evil name among men. In short, if you honor me it will be a tribute to us both; if I honor you, it will bring us both disgrace.

d Enough of these matters. The sphere is not correct. Archedemus will explain it to you when he comes. And upon that other question of weightier and more sublime import about which you say you have difficulties, let him by all means enlighten you. According to his report, you say that the nature of "the first" has not been sufficiently explained. I must speak of this matter to you in enigmas, in order that if anything should happen to these tablets "in the recesses of the sea or land," whoever reads them may e not understand our meaning. It is like this. Upon the king of all do all things turn; he is the end of all things and the cause of all good. Things of the second order turn upon the second principle, and those of the third order upon the third. Now the soul of man longs to understand what sort of things these principles are, and it looks toward the things that are akin 313 to itself, though none of them is adequate; clearly the king and the other principles mentioned are not of that sort. The soul thereupon asks, What then is the nature of these principles? This is the question, O son of Dionysius and Doris, that causes all the trouble; or rather, this it is that produces in the soul the pains of childbirth, from which she must be delivered, or she will never really attain truth. You yourself once told me, under the b laurel trees in your garden, that you understood this matter, having found the answer yourself; and I replied that if you thought so, you had spared me many words. I said, however, that I had never met anyone who had discovered this truth, and that most of my own study was devoted to it. Perhaps you once heard something from someone and providentially started on the track of the answer, but then, thinking you had it safe, neglected to fix fast the proofs of it, which now dart here and there[2] about some object of your fancy, whereas the reality itself is quite different. You c are not alone in this experience; I assure you that everyone at first hearing is affected in just this way, and though some have more difficulty than others, there is almost no one who escapes with but little effort.

Considering thus our past and our present circumstances, we can fairly say we have found the answer to the question in your letter about our relations toward each other. For now that you are conversing with other d philosophers and are testing my doctrines, both by themselves and by comparing them with others, these teachings will take root this time, if your examination is sincere, and you will become attached both to them and to me.

Now how can this and all else that I have mentioned be brought about? It was quite proper of you to send Archedemus to me; do likewise in the future, for when he reaches you and gives you my answers you may still have difficulties. You will then send Archedemus back to me, if you are well advised, and he will return to you, like a good merchant. After you

2. Reading *a(i)ttousi* in b7.

have done this two or three times and have thoroughly examined the answers I send to you, I shall be much surprised if the matters which are e
now troubling you do not appear in an altogether different light. So be bold and inquire of me in this way; for you could not order, nor could Archedemus secure for you, any nobler or diviner merchandise.

Only take care that these letters do not fall into the hands of uninstructed 314
men. Nothing, I dare say, could sound more ridiculous to the multitude than these sayings, just as to gifted persons nothing could be more admirable and inspiring. One must talk about them and hear them expounded again and again, perhaps for many years, and even then their gold is with the utmost difficulty separated and refined. The most surprising thing about it is this: many a man of able understanding and tenacious memory b
has become old in the hearing of these doctrines and has told me that after more than thirty years of hearing them expounded, after examining them and testing them in every way, those points which at the beginning seemed most doubtful he now thinks to be the clearest and most self-evident of all, while the matters he then thought most credible are now quite the contrary. Keep this in mind and take care that you have no occasion in the future to feel remorse for now exposing these doctrines unworthily. The best precaution is not to write them down, but to commit them to memory; for it is impossible that things written should not become c
known to others. This is why I have never written on these subjects. There is no writing of Plato's, nor will there ever be; those that are now called so come from an idealized and youthful[3] Socrates. Farewell and heed my warning; read this letter again and again, then burn it.

Enough of these matters. You were surprised that I sent Polyxenus to you; but about him as well as Lycophron and the other men now at your d
court, I repeat the opinion that I have long had; you are far superior to them in dialectic, both by natural aptitude and by your method of disputation; and none of them lets himself be defeated intentionally, as some people suppose, but only because he cannot help it. You seem, however, to have dealt with them quite fairly and rewarded them properly. But enough, and more than enough, about such men. As for Philistion,[4] if you e
still need him, by all means keep him there; but if it is possible, release him and let Speusippus have his services. Speusippus joins me in this request, and Philistion also assured me that he would be glad to come to Athens if you would let him go. You did well to release the man from the rock quarries; and my petition about Hegesippus, the son of Ariston, and his family is easy to grant, for you wrote me that if anyone ever tried to do him or them an injury and you knew of it you would prevent it. The 315
truth should be told about Lysiclides; he is the only man who has come from Sicily to Athens who has not given a distorted report of the relations

3. Alternatively, 'modernized'.

4. A doctor.

between us; he continues, as always, to put the best interpretation upon what happened.

III

PLATO TO DIONYSIUS, GREETINGS.

Is this the most appropriate way to address you, or should I wish you
b welfare, as I usually do in letters to my friends? You yourself, so I am told by those who were with you on the embassy to Delphi, addressed the god with this fawning expression, writing, they say,

Greetings to you! May you continue the pleasant life of the tyrant!

c For my part I should not address such an exhortation even to a man, far less to a god. To God it would be enjoining something contrary to nature, since the divine has its seat far removed from pleasure and pain; and as for man, pleasure and pain more often do harm, by breeding stupidity, forgetfulness, folly, and insolence in his soul. But enough from me on the subject of salutations; read this and make whatever use you please of it.

d Not a few persons have reported to me that you are telling it about among the ambassadors to your court that once, when I heard you announce your intention to resettle the Greek cities in Sicily and relieve Syracuse by changing your government from a tyranny to a kingship, I dissuaded you, you say, though you were very eager; but that now I am instructing Dion
e to do these very things, and thus we are using your own ideas to wrest your empire from you. You know best whether you gain anything by such tales; in any case you are doing me wrong in telling the exact opposite of what happened. I have been slandered enough by Philistides and numerous other persons before the mercenaries and the people of Syracuse, because I was living in the citadel; and those outside, if any mistake was made, blamed it all on me, saying that you obeyed me in all things. You yourself
316 know quite well that on political matters I willingly labored with you on only a few things at the beginning, when I thought I could do some good. Besides other minor matters, I did considerable work on the preambles to the laws, i.e., on those parts distinct from what you or someone else has added. For I hear that some of you have since been revising them; but which parts are mine and which yours will be obvious to anyone who is able to judge of my character.[1] But as I have just said, I don't need to be further misrepresented, either to the people of Syracuse or to anyone else whom these words of yours may influence; rather I need to be defended
b against those earlier charges as well as against these graver and more malicious ones that have since appeared. Since, then, I am accused on two counts, I must make a twofold defense and show, first, that it was reason-

1. Alternatively, "to recognize my style."

able of me to avoid taking part in your affairs of state, and secondly, that it was not my advice that prevented you, as you say, and stood in your way when you were going to resettle the Greek cities. So now hear first c
my defense on the former of these two points.

I came to Syracuse at the joint invitation of you and Dion. The latter was an old and well-tried friend of mine, of mature age and settled character; and these qualities, as any man with a grain of sense can see, were absolutely necessary for advising upon problems as important as yours were at that time. You, on the contrary, were quite young, with almost no experience in the affairs with which you should have been acquainted, and were quite unknown to me. Shortly after—whether it was a man, or d
God, or chance working through you that was responsible—Dion was banished. Do you think that I could then co-operate with you in state affairs, when I had lost my wise colleague and saw the foolish one left, a ruler only in his own imagination, in reality being ruled by the crowd of unscrupulous men around him? What was my duty under those conditions? Was it not to do what I did, i.e., to let public affairs alone from that e
time on, protecting myself against the slanders of those who envied me, and trying above all to make you [and Dion] friends again, if possible, despite the differences that had arisen to separate you? You yourself can testify that this is the end for which I never ceased to labor. Eventually, though with difficulty, we came to an agreement. Since you had a war on your hands, I was to take ship for home; but after peace had been brought 317
about, both Dion and I were to return to Syracuse and you were to summon us. These are the facts of my first visit to Syracuse and my safe return home.

When peace had come you sent for me a second time, not, however, in accordance with our agreement, for you invited me only, promising to recall Dion later. On this account I refused to come, much to Dion's displeasure, for he thought it would be better for me to come as you commanded. b
A year later a trireme arrived with letters from you, the main import of which was that if I would come, Dion's affairs would be settled in accordance with my desires, but the contrary if I did not. I hesitate to say how many letters at that time came from you and from others in Italy and Sicily who wrote at your request, and to how many of my friends and c
acquaintances they were sent, all urging in the strongest terms that I accede to your request and go. Thus it seemed to everyone, beginning with Dion, that I ought to take ship without hesitation. I kept protesting to them that I was old, and insisting that you would not be strong enough to resist those who were slandering me and wished to make us enemies. For I saw then as I see now that a great and swollen fortune, whether the possessor be a private person or a monarch, generally produces an equally numerous d
and mighty progeny of talebearers and companions in shameless pleasures; this is the worst result of wealth or power of any sort. Nevertheless I dismissed all these thoughts and came to you, determined that no friend of mine should ever be able to claim that he had lost all his goods when they could have been saved by my efforts. Upon my arrival (you know,

e of course, all that happened thereafter) I demanded, in accordance with the promises made in your letters, first that you recall Dion and make him your friend—urging that friendship which, if you had then listened to me, would probably have been better for you and for Syracuse and for the rest of Greece than what we now have, or so my inner oracle tells me. In the second place I asked that Dion's property be held by his family, instead
318 of being apportioned among the executors whose names I need not mention. Furthermore, I thought that my presence with you made it more rather than less obligatory upon you to continue the annual revenues you had been sending to Dion. Failing in each of these requests, I asked permission to depart. Your next move was to urge me to remain for the year, saying that you would sell the whole of Dion's property and send half the proceeds to Corinth, retaining the other half there in Syracuse for
b Dion's son. I could mention many promises that you made and did not keep, but they are numerous and I must be brief. After you had sold all his property and without Dion's consent (though you had said you would not sell it without his consent), then, my fine friend, you put the colophon on all your broken promises. You hit upon a scheme that was neither honorable nor fitting, nor just nor advantageous, to frighten me into ignoring what was going on so that I would not even ask for the dispatch of
c Dion's money. After you had banished Heraclides (an act which neither I nor the people of Syracuse thought just), the fact that I had joined with Theodotes and Eurybius in begging you not to do this you took as a sufficient pretext and said that it had long been clear that I cared nothing for you, but only for Dion and his friends and followers; and that now when accusations had been made against Heraclides and Theodotes, who
d were friends of Dion, I was doing all in my power to keep them from being punished.

But enough of our partnership in political affairs. If you noted in me any other evidences of estrangement from you, you may rightly explain them in the same way. What would you expect? Any reasonable man would properly think me a knave if I had been seduced by the greatness of your power to desert an old comrade and guest-friend in the distress that you had brought him to (and a man in no way inferior to you, if I
e may say so) and had chosen you who were the cause of his wrongs, and had fallen in with all your plans, evidently for the sake of money; for no one would have thought there was any other reason for such a change in me, if I had so changed. It is these events, brought about by you as I have described, that are responsible for the estrangement and wolf-friendship between us.

And now comes, almost as an immediate consequence of the foregoing, my statement on the second point on which I said I should have to defend
319 myself. Attend carefully and see if you can detect any falsehood or untruth in what I say. I declare that about twenty days before my departure from Syracuse for home, when Archedemus and Aristocritus were with us in the garden, you brought against me the same reproach that you now make,

that I cared more for Heraclides and all the rest than I did for you. In their presence you asked me whether I remembered advising you, when I first arrived, to resettle the Greek cities. I admitted that I remembered it, and b
said I still thought that was the best policy. And I must remind you, Dionysius, of what was said immediately afterwards. I asked, as you remember, whether this was all my advice, or whether there was something more; and you replied, with considerable anger and derision, as you thought (whence it has come about that what you then derided is no longer a dream but a reality),[2] and said, with a very forced laugh, "I remember well;[3] you told me to get an education, or leave all these projects alone." c
I replied that your memory was excellent. "And this education," you said, "was to be in geometry, was it not?" I refrained from giving the reply that occurred to me, fearing lest a little word might narrow my prospect of sailing home, to which I was then looking forward with confidence.

Now the reason for all I have said is this: don't slander me by saying that I would not allow you to resettle the Greek cities destroyed by barbarians, or d
to relieve the people of Syracuse by changing your tyranny into a kingship. No lie you could possibly tell about me would be less appropriate; and there is more and even clearer evidence that I could submit for examination, if ever there should be a competent inquiry into the matter, that it was I who urged you to these projects and you who refused to undertake them. And it is not hard to show that they were the best things that could have been done for you and the people of Syracuse and all Sicily.

And now, my friend, if you deny that you have said any of these things e
that you said, that is all the justice I ask; but if you agree that you said them, then follow the wise example of Stesichorus, imitate his recantation, and change your lies to truth.

IV

PLATO TO DION OF SYRACUSE, WELFARE.

I think my good will towards your enterprise has been evident from 320
the beginning, as well as my earnest desire to see it brought to completion, for no other reason than admiration for noble deeds. For I deem it right b
that the men who really possess virtue and exemplify it in their conduct should receive the glory that is due them. All has gone well so far, thank God, but the greatest contest lies ahead. Strength, courage, and cleverness are qualities in which others also may win distinction; but to be

2. Dionysius' contempt for the ideal of a philosophical ruler, it is implied, brought about the victory of Dion and the triumph (or so it seemed at the time) of Plato's political ideals.

3. Accepting the emendation *eu memnēmai* in c1, and taking it as a part of the tyrant's reply.

preeminent above others in truthfulness, justice, high-mindedness, and
c the grace of conduct which these virtues express—this is what would by general consent be expected of those who profess to honor these traits of character. What I say is obvious; nevertheless we must keep reminding ourselves that these men (you know whom I mean) ought to stand out so that the rest of mankind will be as children in comparison. We must make it manifest that we are really the sort of men we say we are, particularly
d since, by God's help, it can easily be done. Other men have to travel far and wide if they are to become known; but the events of which you are the center are such that the whole world, to speak somewhat boastfully, has its eyes upon one place, and upon you especially in that place. You are the object of universal interest; make ready, then, to eclipse Lycurgus and Cyrus and anyone else deemed preeminent in character and statesmanship, especially since many people (indeed most people) here are saying
e that with Dionysius out of the way your cause will in all likelihood come to ruin through your ambitions and those of Heraclides, Theodotes, and the other notables. May no such dissension arise; but if it does, you must
321 show that you can heal it and all will be well. You will no doubt smile at my saying this, for you are yourself aware of the danger. But I have noticed that competitors in the games are spurred on by the shouts of the children, and still more by those of their friends, when they think that the cheering springs from sincerity and good will. Be you then the contestants, and write us when we can help you.

b Matters here are almost the same as when you were with us. Write us also what you have done or are doing, since we hear many reports but know nothing surely. Letters have just now come to Lacedaemon and Aegina from Theodotes and Heraclides, but as I said, though we hear many rumors from the people here,[1] we know nothing. Remember that some persons think you are not sufficiently obliging; don't forget that one
c must please men if one would do anything with them, whereas self-will is fit only for solitude. Good luck!

V

PLATO TO PERDICCAS,[2] WELFARE.

I have advised Euphraeus, as you wrote me, to look studiously after your interests, and it is right that I should give you also the proverbial "holy counsel" of a friend on the various matters you mention, and
d particularly as to the use you should now make of Euphraeus. The man can be of service to you in many ways, but most of all in supplying what you now lack, for you are young and there are not many who can counsel

1. Accepting the emendation *akouontes per tōn tēide* in b4–5.
2. Perdiccas III, elder brother of Philip and king of Macedon from 364 to 359.

young men about it. Constitutions, like species of animals, have each their own language—democracy one, oligarchy another, and monarchy still another. Many persons would say they know these languages, but for the e
most part, and with rare exceptions, they fall short of understanding them. The constitution that speaks its own language to gods and men, and suits its actions to its words, always prospers and survives; but it goes to ruin if it imitates another. Now in this Euphraeus can perhaps be of most use to you, though he will be a manly aid in other respects as well; I believe 322
that he can search out the words appropriate to monarchy as well as any man in your service. Use him, then, for this, and you will not only profit yourself but confer upon him a very great benefit.

If anyone hears this and says, "Plato apparently claims to know what is good for a democracy, but though he is at liberty to speak in the assembly and give it his best advice, he has never yet stood up and said a word," you can answer by saying, "Plato was born late in the life of his native city, and he found the demos advanced in years and habituated by former b
advisers to many practices incompatible with the advice he would give. Nothing would be sweeter to him than to give advice to the demos as to a father, if he did not think he would be risking danger in vain and accomplish nothing. He would do the same about advising me, I know. If we seemed to him incurable, he would bid us a long farewell and refrain from advising about me or my affairs." Good luck! c

VI

PLATO TO HERMIAS AND ERASTUS AND CORISCUS,[1] WELFARE.

It is evident to me that some god has graciously and generously prepared good luck for you, if you receive his gift properly. For you are living as neighbors to one another and each of you needs what the others can best d
supply. Hermias should know that his power for all purposes has its greatest support not in the number of his horses or other equipment of war, nor in the gold he adds to his treasury, but in steadfast friends of solid character. And to Erastus and Coriscus I say, "old as I am," that they need to supplement their knowledge of the Ideas—that noble doctrine—with the knowledge and capacity to protect themselves against wicked e
and unjust men. They are inexperienced, since they have spent a great part of their lives with us, among men of moderation and good will; this is why I said they need some power to protect them, that they may not be forced to neglect the true wisdom and concern themselves more than is fitting with that which is worldly and necessary. Now this power that

1. Hermias was tyrant of Atarneus and Assos in the Troad; Erastus and Coriscus were members of the Academy.

they need Hermias apparently possesses, both as a natural gift (so far as one
323 may judge without knowing him), and as an art perfected by experience.

What is the point of these remarks? To you, Hermias, since I have known Erastus and Coriscus longer than you have, I solemnly declare and bear witness that you will not easily find more trustworthy characters than these neighbors of yours, and I therefore advise you to make it a matter of central importance to attach yourself to them by every honorable means. Coriscus and Erastus in their turn I advise to hold fast to Hermias and to
b try to develop this mutual alliance into a bond of friendship. If ever any one of you should seem to be weakening this union (for nothing human is altogether secure), send a letter to me and my friends declaring the grievance; for unless the injury be very grave, I believe your sense of justice and your respect for us will make the words that we may send more efficacious than any incantation would be in binding up the wound and causing you to grow together again into friendship and fellowship as
c before. If all of us, you and we alike, according to our several abilities and opportunities, apply our wisdom to the preservation of this bond, the prophecies I have just uttered will come true. What will happen if we do not, I will not say, for I am prophesying only what is good, and I declare that with God's help we shall bring all these things to a good issue.

Let this letter be read, if possible, by all three of you gathered together, otherwise by twos, and as often as you can in common. Adopt it as a just
d and binding law and covenant, taking a solemn oath—in gentlemanly earnest, but with the playfulness that is the sister of solemnity—in the name of the divine letter of all things present and to come, and in the name of the lordly father of this governor and cause, whom we shall all some day clearly know, in so far as the blessed are able to know him, if we truly live the life of philosophy.

VII

PLATO TO THE FRIENDS AND FOLLOWERS OF DION, WELFARE.

You have written me that I must consider your aims as identical with those that Dion had, and you therefore urge me to co-operate with you
324 as much as I can, both in word and in deed. My answer is that if your views and purposes are really the same as his, I agree to join with you; if not, I shall have to consider the matter further. What his principles and ambitions were I can tell you, I may say, not from conjecture, but from certain knowledge. For when I first came to Syracuse, being then about forty years of age, Dion was of the age that Hipparinus is now; and it was
b then that he came to the opinions which he continued to hold until the end; the Syracusans, he thought, ought to be free and live under the best of laws. It would not then be surprising if some divine power should bring Hipparinus also to the same mind that Dion had about government. To

learn the way in which these convictions come about is instructive to young and old alike; and since the present occasion seems appropriate, I will try to describe how they originated in my own case.

When I was a young man I had the same ambition as many others: I thought of entering public life as soon as I came of age. And certain happenings in public affairs favored me, as follows. The constitution we c
then had, being anathema to many, was overthrown; and a new government was set up consisting of fifty-one men, two groups—one of eleven and another of ten—to police the market place and perform other necessary duties in the city and the Piraeus respectively, and above them thirty other d
officers with absolute powers. Some of these men happened to be relatives and acquaintances of mine, and they invited me to join them at once in what seemed to be a proper undertaking. My attitude toward them is not surprising, because I was young. I thought that they were going to lead the city out of the unjust life she had been living and establish her in the path of justice, so that I watched them eagerly to see what they would do. But as I watched them they showed in a short time that the preceding constitution had been a precious thing. Among their other deeds they e
named Socrates, an older friend of mine whom I should not hesitate to call the justest man of that time, as one of a group sent to arrest a certain citizen[1] who was to be put to death illegally, planning thereby to make 325
Socrates willy-nilly a party to their actions. But he refused, risking the utmost danger rather than be an associate in their impious deeds. When I saw all this and other like things of no little consequence, I was appalled and drew back from that reign of injustice.[2] Not long afterwards the rule of the Thirty was overthrown and with it the entire constitution; and once more I felt the desire, though this time less strongly, to take part in public b
and political affairs. Now many deplorable things occurred during those troubled days, and it is not surprising that under cover of the revolution too many old enmities were avenged; but in general those who returned from exile[3] acted with great restraint. By some chance, however, certain powerful persons brought into court this same friend Socrates, preferring against him a most shameless accusation, and one which he, of all men, c
least deserved. For the prosecutors charged him with impiety, and the jury condemned and put to death the very man who, at the time when his accusers were themselves in misfortune and exile, had refused to have a part in the unjust arrest of one of their friends.

The more I reflected upon what was happening, upon what kind of men were active in politics, and upon the state of our laws and customs, and the older I grew, the more I realized how difficult it is to manage a city's affairs rightly. For I saw it was impossible to do anything without friends d

1. Leon of Salamis. See *Apology* 32c–d.
2. Alternatively, "from those evil men."
3. Supporters of the democracy.

and loyal followers; and to find such men ready to hand would be a piece of sheer good luck, since our city was no longer guided by the customs and practices of our fathers, while to train up new ones was anything but easy. And the corruption of our written laws and our customs was
e proceeding at such amazing speed that whereas at first I had been full of zeal for public life, when I noted these changes and saw how unstable everything was, I became in the end quite dizzy; and though I did not cease to reflect how an improvement could be brought about in our laws
326 and in the whole constitution, yet I refrained from action, waiting for the proper time. At last I came to the conclusion that all existing states are badly governed and the condition of their laws practically incurable, without some miraculous remedy and the assistance of fortune; and I was forced to say, in praise of true philosophy, that from her height alone was it possible to discern what the nature of justice is, either in the state or in
b the individual, and that the ills of the human race would never end until either those who are sincerely and truly lovers of wisdom come into political power, or the rulers of our cities, by the grace of God, learn true philosophy.

Such was the conviction I had when I arrived in Italy and Sicily for the first time. When I arrived and saw what they call there the "happy life"—a life filled with Italian and Syracusan banquets, with men gorging themselves twice a day and never sleeping alone at night, and following all the
c other customs that go with this way of living—I was profoundly displeased. For no man under heaven who has cultivated such practices from his youth could possibly grow up to be wise—so miraculous a temper is against nature—or become temperate, or indeed acquire any other part of virtue. Nor could any city enjoy tranquillity, no matter how good its laws,
d when its men think they must spend their all on excesses, and be easygoing about everything except the feasts and the drinking bouts and the pleasures of love that they pursue with professional zeal. These cities are always changing into tyrannies, or oligarchies, or democracies, while the rulers in them will not even hear mention of a just and equitable constitution.

These, plus the conviction previously mentioned, were my thoughts on
e coming to Syracuse—a coming which may have been mere coincidence, but which seems to have been the work of some higher power laying then the foundation for what has since come to pass with respect to Dion and Syracuse; and for still further misfortunes, too, I fear, unless you now obey
327 the advice which I am giving for the second time. How can I say that my coming to Sicily then was the beginning of it all? In my association with Dion, who was then a young man, I imparted to him my ideas of what was best for men and urged him to put them into practice; and in doing so I was in a way contriving, though quite unwittingly, the destruction of the tyranny that later came to pass. For Dion was in all things quick to learn, especially in the matters upon which I talked with him; and he listened with a zeal and attentiveness I had never encountered in any
b young man, and he resolved to spend the rest of his life differently from

most Italians and Sicilians, since he had come to love virtue more than pleasure and luxury. For this reason his way of life was more than annoying to those who guided themselves by the practices of tyranny, until the death of Dionysius. After that event he conceived that these convictions which he himself had got from proper instruction might arise in others besides c
himself; and observing that they were in fact making their appearance in the minds of some, at least, of his associates, he thought that by the help of the gods Dionysius himself might be counted among this number; and if this should happen, it would mean an incalculably blessed life for the tyrant himself and the other Syracusans. Furthermore, he thought that by all means I should come to Syracuse as soon as possible and become a partner in his plans, for he recalled our conversations together and how d
effectively they had aroused in him the desire for a life of nobility and virtue. If now he could arouse this desire in Dionysius, as he was attempting to do, he had high hopes of establishing throughout the land a true and happy life, without the massacres and deaths and the other evils that have come to pass. With this just purpose in mind Dion persuaded Dionysius to send for me, and he himself wrote urging me by all means to come at e
once before certain others came in contact with Dionysius and diverted him to a less worthy ideal of life. His petition, though too long to give in full, was as follows: "What better opportunity can we expect," he said, "than the situation which Providence has presented us with?" He mentioned the empire in Italy and Sicily, his own power in it, the youth of 328
Dionysius, and the eager interest he was showing in philosophy and culture; Dion's nephews and other relatives, he said, could be easily persuaded to accept the life and doctrine that I have always taught, and would be a very strong additional influence upon Dionysius; so that now, if ever, might we confidently hope to accomplish that union, in the same persons, of philosophers and rulers of great cities.

These and many other like arguments he addressed to me. For my own b
part I felt a certain anxiety, since one never knows how young men will turn out, for their desires arise quickly and often change to their contraries; but Dion's character, I knew, was steadfast by nature and he had already reached middle age. Consequently I weighed the question and was uncertain whether or not to yield to his urging and undertake the journey. What tipped the scales eventually was the thought that if anyone ever was to attempt to realize these principles of law and government, now was the c
time to try, since it was only necessary to win over a single man and I should have accomplished all the good I dreamed of. This, then, was the "bold" purpose I had in setting forth from home, and not what some persons ascribed to me. Above all I was ashamed lest I appear to myself as a pure theorist, unwilling to touch any practical task—and I saw that I was in danger of betraying Dion's hospitality and friendship at a time d
of no little real danger to him. Suppose he should be killed or banished by Dionysius and his other enemies and should come to me in his exile and say, "Here I am, Plato, a fugitive, not because I lacked hoplites or

horsemen to ward off my enemies, but only for need of the persuasive words by which, as I well know, you are always able to turn young men towards goodness and justice and make them friends and comrades of
e one another. This weakness which you could have remedied is the cause of my being here in exile from Syracuse. But my own misfortune is a small part of your dishonor. You are always praising philosophy, and saying she is held in little esteem by the rest of mankind; but in betraying me now have you not, by neglecting this opportunity, also betrayed her? If
329 we had happened to be living in Megara you would certainly have come as a helper in answer to my call, or you would consider yourself the most trifling of men. And now do you think you can escape the charge of cowardice by pleading the length of the journey, the greatness of the voyage and its fatigue? Far from it." To words of this sort what respectable answer could I give? None. And so from motives as rational and just as
b is humanly possible I departed, giving up for those reasons my occupations here, which are not without dignity, to live under a tyranny seemingly unsuited both to my doctrines and to me. In so going I discharged my obligation to Zeus Xenios[4] and cleared myself of reproach from philosophy, which would have been dishonored if I had incurred disgrace through softness or cowardice.

When I arrived—to make the story short—I found the court of Dionysius full of faction and of malicious reports to the tyrant about Dion. I defended
c him as well as I could, but I was able to do very little; and about the fourth month Dionysius, charging Dion with plotting against the tyranny, had him put aboard a small vessel and exiled in disgrace. Thereupon we friends of Dion were all afraid that one of us might be accused and punished as an accomplice in Dion's conspiracy. About me there even went abroad in Syracuse a report that I had been put to death by Dionysius as the cause
d of all that had happened. But Dionysius, seeing how we all felt, and apprehensive lest our fears might lead to something even graver, treated us all kindly, and me especially he reassured, telling me to have no fear and earnestly begging me to remain; for there was no honor for him in my leaving, he said, but only in my remaining. For this reason he made a great pretense of begging me, but we know that the requests of tyrants are mingled with compulsion. He devised a means for preventing my
e departure by bringing me inside the citadel and lodging me there, whence no ship's captain would have dared to take me away without a messenger sent from Dionysius himself commanding him to do so, still less if Dionysius had forbidden it. Nor would any merchant or guard along the roads leading out of the country have let me pass alone, but would have taken me in charge at once and brought me back to Dionysius, especially since
330 another report had already got abroad, contrary to the earlier one, that Dionysius was wonderfully fond of Plato. What in fact was the situation? With the passage of time Dionysius, I must truly say, did become more

4. Zeus the protector of strangers, the guardian of the obligations of hospitality.

and more attached to me as he became more familiar with my manner and character; but he wanted me to praise him more than I did Dion and value his friendship more highly, and he was marvelously persistent towards this end. How this could best have come about, if at all, was through his becoming my disciple and associating with me in discourse b about philosophy; but he shrank from this, for the intriguers had made him fear that he would be entrapped, so that Dion would have accomplished his purposes. I put up with all this, however, holding fast to the original purpose for which I had come, hoping that he might somehow come to desire the philosophic life; but I never overcame his resistance.

These, then, were the circumstances that account for my first visit to Sicily and occupied the time of my sojourn there. Afterwards I came home, c only to return again at the urgent summons of Dionysius. Why I returned and what I did, with the explanation and justification of my actions, I will go into later for the benefit of those who wonder what my purpose was in going a second time. But in order that these incidental matters may not usurp the chief place in my letter, I will first advise what is to be done in the present circumstances. This, then, is what I have to say.

When one is advising a sick man who is living in a way injurious to his health, must one not first of all tell him to change his way of life and give d him further counsel only if he is willing to obey? If he is not, I think any manly and self-respecting physician would break off counseling such a man, whereas anyone who would put up with him is without spirit or skill. So too with respect to a city: whether it be governed by one man or many, if its constitution is properly ordered and rightly directed, it would be sensible to give advice to its citizens concerning what would be to the e city's advantage. But if it is a people who have wandered completely away from right government and resolutely refuse to come back upon its track and instruct their counselor to leave the constitution strictly alone, threaten- 331 ing him with death if he changes it, and order him instead to serve their interests and desires and show them how they can henceforth satisfy them in the quickest and easiest way—any man, I think, who would accept such a role as adviser is without spirit, and he who refuses is the true man. These are my principles; and whenever anyone consults me on a question of importance in his life, such as the making of money, or the care of his b body or soul, if it appears to me that he follows some plan in his daily life or is willing to listen to reason on the matters he lays before me, I advise him gladly and don't stop with merely discharging my duty. But a man who does not consult me at all, or makes it clear that he will not follow advice that is given him—to such a man I do not take it upon myself to offer counsel; nor would I use constraint upon him, not even if he were my own son. Upon a slave I might force my advice, compelling him to follow it against his will; but to use compulsion upon a father or mother is to me an impious act, unless their judgment has been impaired c by disease. If they are fixed in a way of life that pleases them, though it may not please me, I should not antagonize them by useless admonitions,

nor yet by flattery and complaisance encourage them in the satisfaction of desires that I would die rather than embrace. This is the principle which a wise man must follow in his relations towards his own city. Let him
d warn her, if he thinks her constitution is corrupt and there is a prospect that his words will be listened to and not put him in danger of his life; but let him not use violence upon his fatherland to bring about a change of constitution. If what he thinks is best can only be accomplished by the exile and slaughter of men, let him keep his peace and pray for the welfare of himself and his city.

In this way, then, I venture to advise you, as Dion and I used to advise Dionysius, first of all to make his daily life such as to give him the greatest
e possible mastery over himself and win him loyal friends and followers. In so doing, we said, he might avoid his father's experience when, after taking over many great cities in Sicily that had been laid waste by the barbarians, he was unable at their resettlement to establish loyal governments in them. For he had no comrades to head these governments, neither among foreigners, nor among his own brothers whom he had trained in
332 their youth (since they were younger than himself) and raised from private to royal station and from poverty to great wealth. None of these was he able, either by persuasion or by teaching, by benefits conferred or by ties of kinship, to make an associate in his empire. In this respect he was seven times weaker than Darius, who had neither brothers to rely upon, nor persons trained by himself, but only those who helped him to overthrow
b the Mede and the Eunuch. He distributed among them seven provinces, each one greater than all Sicily, and he found them to be loyal, for they did not attack him or one another; and in so doing he set an example of what a good lawgiver and king should be, for he established laws that have kept the Persian empire to this day. We have another example in the Athenians, who took over the protection of a number of Hellenic cities threatened by barbarians. Though the Athenians had not themselves settled these cities but took them over already established, yet they maintained
c their power over them for seventy years because of the friends they made in each of them. But Dionysius, though he united all Sicily into a single city (for he knew that he could trust no one), was scarcely able to survive, for he was poor in friends and loyal followers, and the possession or lack of these is the best indication of a man's virtue or vice.

This is the advice that Dion and I gave to Dionysius, since his father's
d neglect had resulted in his being without culture and unused to associations appropriate to his position. We said that once embarked upon the course just mentioned[5] he should induce others among his relatives and companions to become friends and partners in the pursuit of virtue; but above all to become a friend to himself, for in this respect he was incredibly deficient. We did not say it thus openly, for that would not have been safe, but made veiled references to his weakness, striving by our words to show

5. Accepting the emendation *epi tauta* at d3, with no lacuna in d2.

him that everyone must do this who would save himself and the people over whom he rules, whereas any other course will accomplish his ruin e
and theirs. Let him take the path we pointed out and perfect himself in wisdom and self-control; then if he should resettle the deserted cities of Sicily, and bind them together with such laws and constitutions as would make them friendly to himself and to one another and a mutual help against the barbarians, he would have an empire not twice but actually many times as powerful as his father's had been; he would be ready to 333
inflict upon the Carthaginians a far heavier defeat than they had suffered in the days of Gelon, instead of paying tribute to these barbarians as he was doing at present under the agreement his father had made.

These were the words of exhortation we addressed to Dionysius—we who were conspiring against him, according to the reports that were current on all sides. These reports finally prevailed with Dionysius, as you know, bringing exile to Dion and fear to us his friends. But—to jump to the end b
of the many events of this short time—when Dion returned from the Peloponnesus and Athens he indeed taught Dionysius a lesson. And then when he had delivered the people of Syracuse and twice restored their city to them, they felt towards Dion exactly as Dionysius had. For at the time when Dion was endeavoring to educate Dionysius and form him into a king worthy of the office, making himself thus a partner in all Dionysius' life, Dionysius was giving ear to the slanderers who said that Dion was conspiring against the tyrant in all that he was doing. The studies he c
enjoined were obviously intended, they said, to bewitch the mind of Dionysius so that he would neglect his kingdom and entrust it to Dion, who would then make it his own and treacherously banish Dionysius from power. These suspicions against Dion prevailed then as they did later when circulated among the Syracusans; but their triumph was an unnatural one and puts to shame those who were the cause of it. What sort of triumph it was you ought to hear, you who have asked for my help in the present crisis. I, an Athenian citizen, a friend of Dion and his ally, came to the d
tyrant in order to bring about friendship, not war, between them; but the slanderers worsted me in this contest. And when Dionysius tried by honors and gifts to persuade me to take his side and affirm that his banishment of Dion had been proper, he failed utterly, as you know. Later Dion came home bringing with him two brothers from Athens, friends whom he had e
acquired not through philosophy, but by way of that facile comradeship which is the basis of most friendship, and which is cultivated by hospitality and mystic rites and initiation into secrets; because of these associations and the service they had rendered Dion in returning to Syracuse, these two men who came with him had become his comrades. But when they 334
arrived in Sicily and saw how Dion was being slandered among the people of Syracuse whom he had liberated, and was being accused of plotting to become a tyrant, not only did they betray their comrade and host, but they became as it were his murderers, since they stood by with arms in their hands to assist his assassins. The shame and impiety of their action

I mention only, without dwelling upon it; many others will make it their
b theme both now and in time to come. But I cannot pass over what is said about Athens, that these men brought dishonor on their city. Remember that he also was an Athenian who refused to betray this same Dion when by doing so he could have had money and honors in abundance. He had become Dion's friend not through vulgar fellowship, but through common liberal culture; and this alone should a sensible man trust, rather than kinship of soul or body. Therefore I say that these two who murdered
c Dion were not worthy of bringing their city into discredit, for they were never men of any consequence.

I have said all this for the purpose of advising Dion's friends and relatives; and to all that has been said I add the same advice and the same doctrine that I have given twice before. Do not subject Sicily nor any other state to the despotism of men, but to the rule of laws; this at least is my doctrine. For despotic power benefits neither rulers nor subjects, but is
d an altogether deadly experience for themselves, their children, and their children's children; and no one grasps at the prizes it offers except petty and illiberal souls who know nothing of the divine and human goods that are now and for all time good and just. This is the doctrine that I endeavored to bring home, first to Dion, next to Dionysius, and now for the third time do so to you. Listen to me then, in the name of Zeus the Savior, to whom this third libation belongs. Consider Dionysius and Dion, of whom one
e was deaf to my teachings and now lives ignobly, and the other listened to me and died nobly; for it is altogether noble and right to suffer whatever may come while aiming at the highest for oneself or one's city. None of us can avoid death, nor if any man could would he be happy, as people think; for there is nothing worth mentioning that is either good or bad to
335 creatures without souls, but good and evil exist only for a soul, either joined with a body or separated from it. And we must always firmly believe the sacred and ancient words declaring to us that the soul is immortal, and when it has separated from the body will go before its judges and pay the utmost penalties. Therefore we must count it a lesser evil to suffer great wrongs and injustices than to do them, though this is
b a saying that the avaricious man, who is poor in the goods of the soul, will not give ear to; or if he does, laughs it into silence, as he thinks, and goes about like a wild beast snatching from every quarter whatever he thinks will furnish him meat or drink or the satisfaction of that slavish and graceless pleasure incorrectly called after Aphrodite. He is blind and does not see what defilement his plunderings involve, nor how great an evil attaches to each wicked act—a defilement which the evildoer necessarily drags with him as he goes up and down the earth and follows his
c dishonorable and utterly wretched path to the world below.

Now Dion had accepted this and other similar teachings of mine, and I may rightly be as indignant at his murderers as at Dionysius. Both parties have done infinite wrong to me and, I may say, to all mankind—the first two in striking down a man whose purpose was to realize justice, the

other in refusing to have anything to do with justice, though he possessed every resource for making it prevail throughout his domain. If in his empire d there had been brought about a real union of philosophy and power, it would have been an illustrious example to both Greeks and barbarians, and all mankind would have been convinced of the truth that no city nor individual can be happy except by living in company with wisdom under the guidance of justice, either from personal achievement of these virtues or from a right training and education received under God-fearing rulers. This is the center of my grievance against Dionysius; the other injuries e that he has done to me are trivial in comparison. And he who murdered Dion has unknowingly produced the same result. For of Dion I know, as surely as a man can know anything about his fellow men, that if he had held the power he would not have been diverted from using it for the following purposes. First of all, with regard to Syracuse,[6] his native city, 336 after having cleansed her of her servitude and put on her the garment of freedom, he would have made every effort to adorn her citizens with the best and most suitable laws. Then he would have turned with ardor to the next task, that of resettling all Sicily and liberating her from the barbarians, driving out some of them and subjugating others, a thing he could have done more easily than Hiero. Such deeds accomplished by a man of justice and courage and temperance and philosophy would have produced in the b multitude the same respect for virtue which, if Dionysius had listened to me, would have made its saving appearance, one may say, among all mankind. But now some daemon or avenging deity has fallen upon us, and through disrespect for law and the gods, and worst of all, through the audacity of ignorance—that soil in which all ills are rooted and grow, to produce in the end a bitter fruit for those who have planted them—such ignorance has a second time overturned all our plans and brought them to naught.

But on this our third trial let us avoid saying anything of ill omen. In c spite of previous misfortunes, I advise you, the friends of Dion, to imitate his love for his country and his sober way of living and to try to carry out, under better auspices, these plans of his; and what they were you have clearly heard me explain. If there is anyone in your number who is incapable of living in the Dorian fashion like your fathers and follows the "Sicilian life" of the slayers of Dion, do not ask his help nor imagine that d he will act loyally or dependably. But summon others to help you in resettling all Sicily and equalizing her laws. Summon them not only from Sicily herself, but from the whole of the Peloponnesus; and do not fear even Athens, for Athens also has citizens preeminent in virtue who abhor the shameless audacity of those who slay their hosts. But if these projects I have mentioned must be deferred, because you are now hard pressed by the many and diverse factions daily sprouting in your midst, then e anyone to whom the gods have given a modicum of right opinion must

6. Accepting the emendation *ē epi tode. Surakousas* in a1.

know that there can be no end to the evils of faction until the party that has gained the victory in these battles and in the exiling and slaughtering
337 of fellow citizens forgets its wrongs and ceases trying to wreak vengeance upon its enemies. If it controls itself and enacts laws for the common good, considering its own interests no more than those of the vanquished, the defeated party will be doubly constrained, by respect and by fear, to follow the laws—by fear because the other party has demonstrated its superior force, and by respect because it has shown that it is able and willing to conquer its desires and serve the law instead. In no other way can a city
b that is rent by factions bring its disorders to an end, but it will continue to be divided within itself by strife and enmity, hatred and distrust.

Whenever, then, the victors desire to save their city, they must enter into counsel with themselves and first of all select the most eminent Greeks they can discover—old men, with wives and children at home, descended from a long line of illustrious ancestors and each of them possessing a
c fair amount of property (fifty such men will be enough for a city of ten thousand)—and these they must induce, by personal entreaties and by all the honors at their disposal, to leave home and come to their aid; and when they have come they must direct them to make laws, binding them upon oath to award no more to the victors than to the vanquished, but to consider only the equal and common good of the whole city. And then when the laws have been laid down everything depends upon this. If the
d victors show themselves more eager than the vanquished to obey the laws, then everything will be safe, happiness will abound, and all these evils will take their flight. But let no one who refuses to abide by these principles call upon me or anyone else for support. These proposals are akin to those that Dion and I tried to accomplish for the benefit of Syracuse, but second best. The best were those that we earlier tried to effect with the aid of Dionysius himself [goods to be common to all]. But fortune is mightier
e than men and shattered our plans. Now it is for you to try to bring them about with better luck, and may divine favor attend your efforts.

This, then, is my advice and admonition, and the account of my first visit to Dionysius. As to my later journey across the water, whoever is interested can learn from what follows that it was a reasonable and proper venture. The early part of my first stay in Syracuse passed as I have
338 described it above before giving my advice to the relatives and friends of Dion. After the events described, I made every effort to persuade Dionysius to let me depart, and we came to an agreement that when peace was restored (war was then going on in Sicily) and when Dionysius had made his empire more secure, he would recall both Dion and me. He also asked
b Dion to consider himself not as having been exiled, but only banished.[7] On these conditions I promised that I would return. After peace was restored he sent for me, but Dion he asked to wait another year; me, however, he urged most strongly to come. Dion consented, and even

7. Banishment did not involve the confiscation of the condemned person's property.

entreated me to set sail; in fact there were many reports coming from Sicily that Dionysius had now once more conceived a great desire for philosophy, and this was why Dion persistently urged me not to disobey the summons. But as for me, though I knew that philosophy often affects young men in this way, yet it seemed to me safer, for the present at least, to say farewell c to my plans and let Dion and Dionysius alone; and I offended both of them by replying that I was an old man, and that what they were doing now did not at all accord with the agreement we had made. Now it seems that after this, Archytas visited Dionysius (for before my departure I had established relations of friendship and hospitality between Archytas and his Tarentine friends and Dionysius), and that there were certain other d persons who had learned something from Dion, and others who had learned from them; and being full of these half-understood doctrines, they were apparently trying to converse with Dionysius about them as if he had mastered all my thought. Now he is not without natural capacity for learning, and besides is extraordinarily vain; and no doubt he was pleased to have these questions addressed to him, and ashamed to have it discovered that he had learned nothing during my stay. For these reasons he e came to desire a clearer understanding, and at the same time his ambition spurred him on. (Why he did not learn from me during my first visit, I have described above.) When, therefore, I had got safely home and had, as I have just said, disregarded his summons to return, Dionysius' chief ambition, I think, was to prevent anyone from supposing that I had refused to come to his court because I had a contempt for his nature and character 339 and was displeased with his way of living. I must tell the truth, and put up with it if anyone, after hearing what happened, despises my philosophy and esteems the tyrant's intelligence. Dionysius summoned me a third time, sending a trireme to ease the journey for me, and with it certain Sicilian acquaintances of mine, among them Archedemus, one of the associates of Archytas and a man whom, as he knew, I valued the most highly b of all men in Sicily. These all brought me the same story of the marvelous progress Dionysius was making in philosophy. He knew of my feelings towards Dion and of Dion's desire to have me embark and go to Syracuse; so he wrote me a very lengthy letter, evidently composed with these facts in view. The beginning of it was about as follows: "Dionysius to Plato," then the customary salutations, and immediately afterwards, "If you come c at once to Syracuse as we have requested, first of all the issues that concern Dion will be settled in whatever way you desire (for I know you will desire only what is fair and I agree to this); but if not, none of these questions, whether touching Dion's person or any other matter, will be settled to your liking." Such were his words; to give the rest of the letter would take too much space and would not be pertinent here. Other letters kept coming to me from Archytas and the Tarentines praising Dionysius' d philosophy and saying that if I did not come now the friendship I had brought about between them and Dionysius, a friendship which was of no little importance to their state, would be broken off. Now when the

summons had taken on this character, with my friends in Sicily and Italy pulling me and those at Athens almost pushing me away with their urging,
e the same consideration occurred to me as before, that I ought not to betray my friends and followers in Tarentum. Besides, I thought, it is not an unusual thing that a young man of native intelligence who has overheard some talk of lofty matters should be seized by a love for an ideal of life. I ought then to test the situation clearly to see on which side the truth lay, and by no means to give up in advance and expose myself to the blame
340 that would rightly fall upon me if these reports should really be true. I set off, therefore, under cover of this reasoning, though with many fears and forebodings of evil, as can well be understood. "The third time to the Savior," runs the proverb;[8] and my third journey at least confirmed its truth, for by good luck I again came off safely; and next to God I thank Dionysius for it, because there were many determined to destroy me, but he prevented them and showed a certain respect for me and my position.
b When I arrived, I thought my first task was to prove whether Dionysius was really on fire with philosophy, or whether the many reports that came to Athens were without foundation. Now there is a certain way of putting this to the test, a dignified way and quite appropriate to tyrants, especially to those whose heads are full of half-understood doctrines, which I saw at once upon my arrival was particularly the case with Dionysius. You must picture to such men the extent of the undertaking, describing what
c sort of inquiry it is, with how many difficulties it is beset, and how much labor it involves. For anyone who hears this, who is a true lover of wisdom, with the divine quality that makes him akin to it and worthy of pursuing it, thinks that he has heard of a marvelous quest that he must at once enter upon with all earnestness, or life is not worth living; and from that time forth he pushes himself and urges on his leader without ceasing, until he has reached the end of the journey or has become capable of doing without
d a guide and finding the way himself. This is the state of mind in which such a man lives; whatever his occupation may be, above everything and always he holds fast to philosophy and to the daily discipline that best makes him apt at learning and remembering, and capable of reasoning soberly with himself; while for the opposite way of living he has a persistent hatred. Those who are really not philosophers but have only a coating of opinions, like men whose bodies are tanned by the sun, when they see how much learning is required, and how great the labor, and how orderly
e their daily lives must be to suit the subject they are pursuing, conclude that the task is too difficult for their powers; and rightly so, for they are
341 not equipped for this pursuit. But some of them persuade themselves that they have already sufficiently heard the whole of it and need make no further effort. Now this is a clear and infallible test to apply to those who love ease and are incapable of strenuous labor, for none of them can ever

8. See 334d above.

blame his teacher, but only himself, if he is unable to put forth the efforts that the task demands.

It was in this fashion that I then spoke to Dionysius. I did not explain everything to him, nor did he ask me to, for he claimed to have already a sufficient knowledge of many, and the most important, points because b
of what he had heard others say about them. Later, I hear, he wrote a book on the matters we talked about, putting it forward as his own teaching, not what he had learned from me. Whether this is true I do not know. I know that certain others also have written on these same matters; but who they are they themselves do not know. So much at least I can affirm with confidence about any who have written or propose to write on these c
questions, pretending to a knowledge of the problems with which I am concerned, whether they claim to have learned from me or from others or to have made their discoveries for themselves: it is impossible, in my opinion, that they can have learned anything at all about the subject. There is no writing of mine about these matters, nor will there ever be one. For this knowledge is not something that can be put into words like other sciences; but after long-continued intercourse between teacher and pupil, in joint pursuit of the subject, suddenly, like light flashing forth when a fire is kindled, it is born in the soul and straighway nourishes itself. And d
this too I know: if these matters are to be expounded at all in books or lectures, they would best come from me. Certainly I am harmed not least of all if they are misrepresented. If I thought they could be put into written words adequate for the multitude, what nobler work could I do in my life than to compose something of such great benefit to mankind and bring to light the nature of things for all to see? But I do not think that the e
"examination," as it is called, of these questions would be of any benefit to men, except to a few, i.e., to those who could with a little guidance discover the truth by themselves. Of the rest, some would be filled with an ill-founded and quite unbecoming disdain, and some with an exaggerated and foolish elation, as if they had learned something grand.

Let me go into these matters at somewhat greater length, for perhaps 342
what I am saying will become clearer when I have done so. There is a true doctrine that confutes anyone who has presumed to write anything whatever on such subjects, a doctrine that I have often before expounded, but it seems that it must now be said again. For every real being, there are three things that are necessary if knowledge of it is to be acquired: first, the name; second, the definition; third, the image; knowledge comes b
fourth, and in the fifth place we must put the object itself, the knowable and truly real being. To understand what this means, take a particular example, and think of all other objects as analogous to it. There is something called a circle, and its name is this very word we have just used. Second, there is its definition, composed of nouns and verbs. "The figure whose extremities are everywhere equally distant from its center" is the definition of precisely that to which the names "round," "circumference," and "circle" apply. Third is what we draw or rub out, what is turned or destroyed; c

but the circle itself to which they all refer remains unaffected, because it is different from them. In the fourth place are knowledge (*epistēmē*), reason (*nous*), and right opinion (which are in our minds, not in words or bodily shapes, and therefore must be taken together as something distinct both from the circle itself and from the three things previously mentioned); of
d these, reason is nearest the fifth in kinship and likeness, while the others are further away. The same thing is true of straight-lined as well as of circular figures; of color; of the good, the beautiful, the just; of body in general, whether artificial or natural; of fire, water, and all the elements; of all living beings and qualities of souls; of all actions and affections. For
e in each case, whoever does not somehow grasp the four things mentioned will never fully attain knowledge of the fifth.

These things, moreover, because of the weakness of language, are just as much concerned with making clear the particular property of each object
343 as the being of it. On this account no sensible man will venture to express his deepest thoughts in words, especially in a form which is unchangeable, as is true of written outlines. Let us go back and study again the illustration just given. Every circle that we make or draw in common life is full of characteristics that contradict the "fifth," for it everywhere touches a straight line, while the circle itself, we say, has in it not the slightest element belonging to a contrary nature. And we say that their names are by no
b means fixed; there is no reason why what we call "circles" might not be called "straight lines," and the straight lines "circles," and their natures will be none the less fixed despite this exchange of names. Indeed the same thing is true of the definition: since it is a combination of nouns and verbs, there is nothing surely fixed about it. Much more might be said to show that each of these four instruments is unclear, but the most important point is what I said earlier: that of the two objects of search—the particular
c quality and the being of an object—the soul seeks to know not the quality but the essence, whereas each of these four instruments presents to the soul, in discourse and in examples, what she is not seeking, and thus makes it easy to refute by sense perception anything that may be said or pointed out, and fills everyone, so to speak, with perplexity and confusion. Now in those matters in which, because of our defective training, we are not accustomed to look for truth but are satisfied with the first image suggested to us, we can ask and answer without making ourselves ridicu-
d lous to one another, being proficient in manipulating and testing these four instruments. But when it is "the fifth" about which we are compelled to answer questions or to make explanations, then anyone who wishes to refute has the advantage, and can make the propounder of a doctrine, whether in writing or speaking or in answering questions, seem to most of his listeners completely ignorant of the matter on which he is trying to speak or write. Those who are listening sometimes do not realize that it is not the mind of the speaker or writer which is being refuted, but these four instruments mentioned, each of which is by nature defective.

By the repeated use of all these instruments, ascending and descending e
to each in turn, it is barely possible for knowledge to be engendered of
an object naturally good, in a man naturally good; but if his nature is
defective, as is that of most men, for the acquisition of knowledge and the
so-called virtues, and if the qualities he has have been corrupted, then not 344
even Lynceus could make such a man see.[9] In short, neither quickness of
learning nor a good memory can make a man see when his nature is not
akin to the object, for this knowledge never takes root in an alien nature;
so that no man who is not naturally inclined and akin to justice and all
other forms of excellence, even though he may be quick at learning and
remembering this and that and other things, nor any man who, though
akin to justice, is slow at learning and forgetful, will ever attain the truth
that is attainable about virtue. Nor about vice, either, for these must be b
learned together, just as the truth and error about any part of being must
be learned together, through long and earnest labor, as I said at the begin-
ning. Only when all of these things—names, definitions, and visual and
other perceptions—have been rubbed against one another and tested, pupil
and teacher asking and answering questions in good will and without
envy—only then, when reason and knowledge are at the very extremity
of human effort, can they illuminate the nature of any object.[10]

For this reason anyone who is seriously studying high matters will be c
the last to write about them and thus expose his thought to the envy and
criticism of men. What I have said comes, in short, to this: whenever we
see a book, whether the laws of a legislator or a composition on any other
subject, we can be sure that if the author is really serious, this book does
not contain his best thoughts; they are stored away with the fairest of his
possessions. And if he has committed these serious thoughts to writing,
it is because men, not the gods, "have taken his wits away."[11] d

To anyone who has followed this discourse and digression it will be
clear that if Dionysius or anyone else—whether more or less able than
he—has written concerning the first and highest principles of nature, he
has not properly heard or understood anything of what he has written
about; otherwise he would have respected these principles as I do, and
would not have dared to give them this discordant and unseemly publicity.
Nor can he have written them down for the sake of remembrance; for
there is no danger of their being forgotten if the soul has once grasped e
them, since they are contained in the briefest of formulas. If he wrote them,
it was from unworthy ambition, either to have them regarded as his own
ideas, or to show that he had participated in an education of which he
was unworthy if he loved only the reputation that would come from having 345

10. Accepting the emendation *sunteinontōn* at b7.

11. *Iliad* vii.360.

shared in it. Now if Dionysius did indeed come to understand these matters from our single conversation, how that happened, "God wot," as the Thebans say. For as I said, I went through the matter with him once only, never afterwards. Whoever cares to understand the course of subsequent events should consider why it was that we did not go over the matter a second or a third time, or even oftener. Was it that Dionysius, after this
b one hearing, thought he understood well enough and really did understand, either because he had already found these principles himself or had previously learned them from others? Or did he think that what I said was of no value? Or, a third possibility, did he realize that this teaching was beyond him, and that truly he would not be able to live in constant pursuit of virtue and wisdom? If he thought my teachings of no value he contradicts many witnesses who say the opposite and who are probably much more capable judges of such matters than Dionysius. And if he had already discovered or learned these doctrines and regarded them as fitted
c for educating a liberal mind, how—unless he is a very strange creature indeed—could he have so lightly brought ignominy upon their teacher and guardian? But this is what he did, as I shall now tell you.

Shortly after the above occurrence, although Dionysius had previously allowed Dion to retain possession of his property and to enjoy its revenues, he gave orders to Dion's stewards not to send anything more to the Peloponnesus, as if he had completely forgotten his letter, saying that this property belonged not to Dion but to Dion's son, who was his nephew
d and under his legal guardianship. Matters then had come to this, in so short a time. From this action I saw precisely the character of Dionysius' desire for philosophy, and in spite of myself I was indignant, and with good reason. It was summer at the time, and ships were leaving the port. Though it was clear to me that I ought not to be more angry with Dionysius than with myself and the others who had compelled me to come a third
e time to this strait of Scylla, "To measure again the length of deadly Charybdis,"[12] yet I thought I ought to tell Dionysius that it was impossible for me to remain after this scurvy treatment of Dion. He tried to placate me and begged me to remain, thinking it would not go well with him if I should set out immediately as the personal bearer of this news; but when he could not persuade me, he said that he would himself make the
346 preparations for my departure. For in my anger I thought of going on board one of the vessels ready to set sail and suffering the consequences, whatever they might be, of being detained, since it was clearly evident that I had done no wrong but was the victim of wrongdoing. Seeing that nothing could induce me to remain, he devised a scheme for keeping me until the ships could no longer leave port. The following day he came to me with this persuasive speech: "Let us dispose of this matter of Dion
b and Dion's property which has been the cause of frequent disagreement between you and me. For your sake I will do this for Dion. Let him have

12. *Odyssey* xii.428.

his property and live in the Peloponnesus, not as an exile, but as one permitted to return here as soon as he and I and you his friends have come to an understanding—all this upon condition that he is not to conspire against me; you and your relatives and the relatives of Dion here shall be sureties to me, and he shall give you pledges of good faith. Let the property he takes be deposited in the Peloponnesus and at Athens in the keeping of any persons you please, and let Dion enjoy the revenues from it, but c
be without power to dispose of the principal without your consent. For it will be a large sum and I have little faith that if he had this wealth at his disposal he would act justly towards me; but in you and your friends I have more confidence. See now whether these proposals please you, and if they do, stay for the year on these terms and when spring comes depart d
with this property. Dion, I know, will be very grateful to you if you do this for him."

I was angered when I heard this proposal, nevertheless I said I would consider the matter and bring him my opinion on it the following day. This then was agreed upon. Later, when I had got to my own quarters and was thinking the matter over, I found myself in great perplexity; but this was the dominant thought in my deliberations: "Beware! Dionysius e
may not intend to keep a single one of his promises; but what if he should write to Dion after I have gone, telling him what he has just said to me? And should persuade a number of Dion's friends to write also, intimating plausibly that it was not his refusal but mine that prevented his doing what he promised, and making me out altogether indifferent to Dion's interests? Besides this, if he does not want to see me go and, without issuing definite orders to any ship's captain, should let it be generally 347
known, as he easily could, that he was unwilling for me to sail, would any captain take me as a passenger, even if I could get out of the palace of Dionysius?" For besides the other disadvantages of my situation, I was living in the garden surrounding the palace, and the gatekeeper would not have let me out without an express command from Dionysius. "But if I remain for the year, I can write to Dion what my situation is and what I am doing; and then if Dionysius keeps any part of his promises, what I have done will not seem altogether ridiculous," for the property of Dion, b
if estimated rightly, was probably worth not less than a hundred talents. "On the other hand, if the contrary comes to pass,[13] as is most likely, I don't see what course I can then take. Nevertheless, it seems that I must probably hold out one more year and put these schemes of Dionysius to the test of events."

Having come to this decision, I told Dionysius the next day that I had decided to remain. "But," I said, "you must not think that I can bind Dion. c
Let us send him a joint letter explaining the agreement we have just made and ask whether its terms satisfy him, telling him that if he is not satisfied and wishes to modify them in any way to write us at once; and in the

13. Reading *apemphainonta* in b3.

meantime I ask that you take no new steps affecting him." These were my words and these were the terms we agreed upon, almost exactly as I have stated them. Now the boats had set sail and it was no longer possible for
d me to leave, when Dionysius mentioned to me that half the property should be Dion's and half his son's. He said he was going to sell it and give me half the proceeds to take to Dion; the other half he would keep here for the son, for this was clearly the most equitable procedure. I was stunned by this statement, but thought it foolish to make any further protest; yet I did say that we should await the letter from Dion and advise him of these new conditions. Immediately thereafter he sold the whole of Dion's
e property in the most audacious manner, selling it on whatever terms and to whomever he pleased, and said not a word to me about it. And likewise I refrained from saying anything more to him about Dion's affairs, for I thought any further effort would be useless.

This then was the result of my efforts in aid of philosophy and my friends. From this time on Dionysius and I lived, I like a bird looking out
348 of its cage and longing to fly away, he scheming how to frighten me[14] without turning over any of Dion's property; yet before all Sicily we professed to be friends.

Now Dionysius, contrary to the practice of his father, tried to reduce the pay of his older mercenaries. The soldiers, infuriated, gathered in a
b mob and declared they would not permit it. He tried to hold out against them by closing the gates of the citadel, but they straightway moved against the walls, chanting a barbarian war cry; and this so frightened Dionysius that he yielded and granted even more than they demanded to the peltasts assembled there. Now a rumor quickly got about that Heraclides had been the cause of all this disturbance. Upon hearing it, Heraclides took flight and concealed himself; and Dionysius, being at a loss how to apprehend
c him, summoned Theodotes to the palace garden, where I happened to be walking at the time. I do not know what else they talked about, for I could not hear them; but I know and recall what Theodotes said to Dionysius in my presence. "Plato," he said, "I am trying to persuade Dionysius here that if I can bring Heraclides before us to answer the charges that have just been made against him, and if in consequence it seems necessary for him to leave Sicily, to let[15] him take his wife and child and sail to the
d Peloponnesus and live there, enjoying the revenue from his property so long as he does no harm to Dionysius. I have already summoned him and will do so now again, and one or the other of these messages should bring him. And I ask and beseech Dionysius, if he should happen upon Heraclides anywhere, either here or in the country, to do nothing more
e than banish him from the land during his present displeasure. Do you consent to this?" he asked, turning to Dionysius. "I consent," he said;

14. See *Letter* III, 318b.

15. Reading *axioun* in c9.

"even if he should be found in your own house he will suffer nothing beyond what you have said." The evening of the following day Eurybius and Theodotes came to me in haste, greatly troubled. Theodotes spoke for them. "Plato," he said, "you were a witness yesterday to the promise Dionysius made to you and me about Heraclides?" "Indeed I was," I replied. "But now," he continued, "there are peltasts running all about trying to take Heraclides, and it is likely that he is somewhere near here. You must with all speed go with us to Dionysius," he said. So we set out, 349
and when we came into his presence the two men stood weeping silently, and I said: "They are afraid that you have changed your mind regarding Heraclides and are acting contrary to what was agreed upon yesterday. For it appears that he has taken refuge nearby." At this he became angry and turned various colors, as is the way with an angry man. Falling before him, Theodotes seized his hand and implored him, with tears in his eyes, b
not to do such a thing. "Cheer up, Theodotes," I interrupted, trying to encourage him; "Dionysius will not presume to do anything contrary to the promise he made yesterday." And Dionysius looked at me and, like a true tyrant, "To you," he said, "I made no promise whatever." "By the gods," I replied, "you at least made a promise, not to do what Theodotes is now imploring you not to do." With these words I turned and went out. After this Dionysius continued to hunt for Heraclides, while Theodotes sent messengers warning him to flee; and though Tisias and a band of c
peltasts were sent in pursuit, Heraclides, it was reported, having a few hours the start of them, got safely into Carthaginian territory.

After this, Dionysius conceived that my resistance to his long-standing plot not to restore Dion's money could now be plausibly made the ground for enmity toward me. His first step was to send me out of the citadel on the pretext that the women were to hold a ten-day sacrifice in the garden d
where I dwelt, and directed me to live outside during this period at the home of Archedemus. While I was there Theodotes sent for me and poured out his complaints and his anger against Dionysius for what he had done. When Dionysius heard that I had visited Theodotes he used this as another pretext, similar to the earlier one, for quarreling with me. He sent to inquire e
whether I had in fact visited Theodotes at his invitation. "Certainly," I replied. "Then he bade me say," said the messenger, "that you are not doing right in always preferring Dion and Dion's friends to himself." After this message he never again summoned me back to the palace, it being now clear that I was the friend of Heraclides and Theodotes, and consequently his enemy, and he knew also that I was not pleased at the complete dissipation of Dion's goods. From that time on, then, I lived outside the 350
acropolis among the mercenaries. Some of the rowers in the fleet were from Athens and fellow citizens of mine; they and others came to me with the report that I had an evil name among the peltasts and that some of them were threatening to kill me if they ever got hold of me. I began then to plan the following means of escape. I sent letters to Archytas and my other friends in Tarentum telling them of my plight, and they found some

pretext for an embassy from their city, dispatching Lamiscus, one of their
b number, with a thirty-oared vessel. When he arrived he besought Dionysius on my behalf, saying that I wished to depart and begging him not to prevent it. Dionysius complied and released me, giving me travel money; but for Dion's property I made no further demand, nor did anyone deliver it to me.

Upon my return to the Peloponnesus I encountered Dion among the spectators at Olympia and recounted to him what had occurred. Calling upon Zeus to witness, he straightway summoned me and my relatives
c and friends to prepare for vengeance against Dionysius, demanding satisfaction to me for breach of hospitality (these were his words and this is what he thought), and to himself for his unjust dismissal and exile. When I heard this I told him to call upon my friends, if they wished to help him. "But as for me," I said, "you and the others compelled me, in a way, to become a guest at the table and hearth of Dionysius and a participant in his sacrifices; and he perhaps believed, from the many reports circulated against me, that I was plotting with you against him and the tyranny—
d yet he did not put me to death, but respected my person. Nor am I any longer at the age for helping anyone carry on war, though I am with you if ever you desire one another's friendship and wish to accomplish something good. But as long as you are intent on harm, look elsewhere for your allies." I said this in disgust at my Sicilian "adventure" and its lack of success. But they did not listen to me; and in failing to heed my attempts at reconciliation they are themselves responsible for all the misfortunes that have come upon them. None of them would ever have
e occurred, humanly speaking, if Dionysius had restored his property to Dion or become fully reconciled with him, for I would have been willing and easily able to restrain Dion; but as it is they have attacked one another and brought about universal disaster.

351 Dion's purpose, however, with respect to his native city and to the power he sought for himself and his friends, was exactly what I should say any moderate man, myself or anyone else, ought to have; such a man would think of enjoying great power and honor only because he is conferring great benefits. I do not mean such benefits as are conferred by an impecunious agitator, lacking in self-control, the weak victim of his passions, who enriches himself and his partisans and his city by organizing plots and
b conspiracies, and puts to death the men of wealth on the pretext that they are enemies, and distributes their property, and charges his fellow conspirators and followers not to blame him if they are poor; nor do I mean the honors enjoyed by a man who "benefits" his city in this way, by dividing the goods of the few among the many by public decree, or who, as head of a great city ruling over many lesser ones, unjustly assigns
c the wealth of the smaller ones to his own city. Neither Dion nor anyone else in his right mind would seek power for these ends, power that would be a plague to himself and his family for all time; but rather would seek it for the purpose of creating, without murder or bloodshed, the best and

most just constitution and system of laws. This is what Dion was aiming at, preferring to be the victim of wickedness rather than the agent of it, though he endeavored to protect himself. In spite of all this he fell, just as he had come to the summit of triumph over his enemies. There is nothing surprising in what he experienced. For although a good man who d
is also prudent and sagacious cannot be altogether deceived about the character of wicked men, it would not be surprising if he should suffer the misfortune of the skilled captain who, though not unaware of the approach of a storm, may not foresee its extraordinary and unexpected violence, and be swamped by its force. This is the mistake that Dion made. Those who caused him to fall were men whom he well knew to be villains, but he did not suspect the depths of their ignorance and villainy and greed. e
By this error he is fallen, and Sicily is overwhelmed with grief.

The advice I have to offer you in the present state of affairs has mostly 352
been given, and let that suffice. Why I undertook the second voyage to Sicily I thought I ought to explain, because of the strange and improbable nature of these events. If then they appear more plausible as I have described them, and if it has been made evident that there were sufficient motives for what happened, this account will have properly accomplished its purpose.

VIII

PLATO TO THE RELATIVES AND FRIENDS OF DION, WELFARE. b

What principles you must follow if you are really to fare well I will do my best to explain to you. And I hope that my advice will be of advantage not only to you (though to you, of course, first of all), but secondly to c
everyone in Syracuse, and thirdly even to your enemies and adversaries—except anyone of them who has done an unholy deed;[1] for such acts are irremediable and a man can never wash away their stain. Give your thought, then, to what I say.

Since the fall of the tyranny you have had nothing but dissension throughout all Sicily, one party desiring to get its power back, the other to make final the suppression of the tyranny. In such circumstances the d
multitude always think the right counsel is to recommend those measures that will do their enemies the most harm and their friends the most good. But it is by no means easy to do great harm to others without bringing many other evils upon oneself. We have a clear example of this close at hand. Only look at what has happened right here in Sicily, with one party attempting to act upon that principle and the other defending itself against their actions; the story of these events, if you should tell it to others, would e
give them many useful lessons, though of such instruction there is hardly

1. I.e., those who connived in the murder of Dion.

any need. On the other hand, a policy that would benefit all concerned, friends and foes alike, or do as little harm as possible to both—this is not easy to see, nor to carry out when it is seen; and to counsel such a policy, or attempt to explain it, seems like making a prayer. By all means, then
353 let it be a prayer—for the gods should be first in every man's words and thoughts—and may it be fulfillled when it declares unto us some such word as follows.

Now you and your enemies have been ruled almost continuously from the beginning of the war by a single family, a family that your ancestors put in power at a time when they were in the direst peril and there was imminent danger that all of Hellenic Sicily would be overrun by the Carthaginians and become barbarian territory. For then it was that to save Sicily they chose Dionysius, a young and brilliant warrior, to take charge
b of the military actions for which he had an aptitude, and Hipparinus as his elder and counselor, making them, as they say, "generals with full power."[2] Was it God and divine chance that saved the city? Or the valor of these leaders? Or both luck and leadership together with the efforts of the citizens? Think what you will; in any case, the city was saved for that
c generation. It is right that everyone should feel gratitude to these saviors for the qualities they displayed; and if in later times the tyrants misused in any way the gift the city had bestowed upon them, for these misdeeds they have in part paid the penalty and should make even further atonement. But what penalties would it necessarily be right to impose in the present state of their affairs? If you were able to get rid of them easily, and without great toil and danger, or if they could easily regain their power, there would be no occasion for offering the advice that I am going
d to give. As it is, however, both of your factions ought to reflect and call to mind how often each party has been in high hopes, and has thought almost always that it lacked only a little of being able to do what it liked, and that this little has repeatedly turned out to be the cause of great and innumerable disasters. The limit is never reached; but what seems to be the end of an old difficulty always involves the beginning of a new one, and in this endless round there is danger that both the tyrannical party
e and the democratic party will be completely destroyed; and eventually, if things take their natural course (which God forbid!), the whole of Sicily will have practically lost the Greek language and will have come under the empire and dominion of the Phoenicians or the Opici.

This is a prospect which should incite every Hellene to search for a remedy with all his might. If anyone has an apter or a better plan than the one I am going to offer, let him bring it forth and he will rightly be
354 called a loyal Hellene. What now appears best to me I will try to explain in all frankness and set it forth with just and impartial reasoning. I am speaking in the fashion of an arbitrator between two parties at law, the one a former tyrant, the other his former subject, and proffering to each

2. Accepting the correction *stratēgous* in b3.

of them my well-known counsel. Now, as always, I advise the tyrant to shun his name and the reality it stands for, and to change his government to a kingship if he can. That he can is shown by the action of that wise b
and good man, Lycurgus, who, seeing that his own relatives in Argos and Messene were becoming tyrants instead of kings and in both cases destroying both themselves and their cities, was filled with apprehension both for his house and his native city, and instituted as a remedy the office of the Elders and that of the Ephors as the saving bond of the kingly power. By such means this kingship has been signally secure through all these generations, since law became the lord and king of men, not men c
tyrants over the laws.

Now this is the point of my present recommendation to you all: let those who are aiming at tyrannical power shun and flee from what senseless and insatiate men call happiness; let them try to change into the form of kings and subject themselves to kingly laws, thus acquiring the highest honors from their willing subjects and from the laws. Likewise I advise those who cherish the ways of freedom and shun the yoke of slavery as d
something evil, to beware lest by an excessive and ill-timed thirst for freedom they fall into the affliction of their ancestors, the excessive anarchy they experienced as a result of their unmeasured passion for liberty. For the Sicilians before the reign of Dionysius and Hipparinus lived happily, as they thought, faring sumptuously and ruling their rulers; they it was who, without any legal judgment, stoned to death the ten generals who preceded Dionysius, in order not to be subject to any master, not even e
justice and the law, but to be altogether and absolutely free. This is why tyranny came upon them. Both servitude in excess and liberty in excess are very great evils, but in due measure both are great goods. Due measure is found in obedience to God, the absence of measure in obedience to men. And the god of wise men is the law; of foolish men, pleasure.

Since this is so, I call upon the friends of Dion to say to all Syracusans 355
that what I advise is his and my joint counsel. I shall be the interpreter of what he would say if he were alive and able to speak to you now. Well, then, someone may say, what words does Dion's counsel contain for us about our present situation? These:

"First of all, men of Syracuse, accept laws that you think will not arouse your desires and turn your thoughts toward money-making and wealth. b
Of the three goods—soul, body, and wealth—your laws must give the highest honor to the excellence of the soul, the second place to that of the body, as subordinate to the excellence of the soul, and the third and lowest rank to wealth, since it serves both body and soul. The sacred tradition that ranks them in this order might rightly be made a positive law among c
you, since it makes truly happy those who live by it; whereas the doctrine that the rich are the happy ones is a foolish saying of women and children, a miserable doctrine in itself, bringing misery upon all who follow it. Put to trial these words about law and you will see by the event that my advice is sound; experience seems to be the truest test of any matter.

"Having received laws of this sort, then, since Sicily is in grave danger
d and neither you nor your adversaries are clearly superior in force, it would without question be just and expedient for all of you to strike a compromise—both for those of you who wish to avoid the rigor of absolute rule and for those who are bent on regaining their power. It was their ancestors, remember, who in their time saved the Hellenes from the barbarians and made it possible for us now to be discussing a constitution; for if the Greeks had been defeated then, there would be no opportunity for deliberation nor any basis for hope. So now let the one party have the freedom they desire, but under the government of a king; and let the other have their office,
e but let it be a responsible kingship, the laws punishing kings and citizens alike if they disobey.

"Now with a steadfast and wholehearted adherence to all these conditions, and with God's help, appoint [three] kings: first, my son, in double gratitude for my father's services and my own (as my father in his time
356 saved the city from the barbarians, I have twice freed it from tyrants, as you yourselves can bear witness); secondly, him who has the same name as my father and is the son of Dionysius, in gratitude for the help he has just rendered your cause, as well as because of his upright character; for though he is the son of a tyrant, he is voluntarily liberating the city and gaining for himself and his house undying honor in place of an ephemeral and unjust tyranny. Thirdly, invite him who is now head of the army of
b your enemies—Dionysius the son of Dionysius—to become king of the Syracusans as willing king of a willing city, if, through fear of misfortune and pity for his native city and its neglected temples and tombs, he shows himself willing to exchange his power for that of a king, in order that his city may not be completely ruined by this civil strife and fall a rich prize to the barbarians.

"Let these then be your kings, three in number. Whether you invest them with the authority of the Spartan kings or agree upon some more limited powers for them, install them in something like the following
c manner. I have already said this to you on a former occasion, but it is well that you hear it again. If the family of Dionysius and Hipparinus is willing to end the present disorders for the salvation of Sicily and gain enduring honors for themselves and their houses on these terms, then, as I have said, summon ambassadors with full authority to effect a reconciliation. Let these ambassadors be whoever and as many as they please, chosen from persons here, or abroad, or both. When they have come together, let
d them begin by drawing up laws and a constitution providing that the kings shall have authority over religious and all other matters appropriate to former benefactors of the city, but that matters of war and peace shall be under the control of five-and-thirty guardians of the laws ruling in conjunction with the assembly and council. There should be various courts of justice for various offenses, but offenses involving death or exile should be judged by the thirty-five, in conjunction with other select judges chosen each year from the officeholders of the preceding year (one from each

office, namely that officer who showed himself the best and justest); these should for the ensuing year judge all cases involving the death or imprisonment or exiling of citizens. But a king should not be permitted to act as judge in such cases, since like a priest he is to remain undefiled by bloodshed or imprisonment or exile. e 357

"This is what I planned to accomplish for you when I was alive, and this is still my earnest desire. If avenging deities in the guise of friends had not prevented me, I should have carried out this plan, after conquering my enemies with your help. Then, if everything had gone as I desired, I should have resettled the rest of Sicily and driven out the barbarians that now possess it, with the exception of those who made common cause with us in fighting for freedom against the tyranny, and I should have restored to b their ancient and ancestral homes the former inhabitants of those Hellenic regions. So now I advise all parties to adopt these same purposes as your common aids, and to work and summon everybody to work with you for their realization, and to regard anyone who refuses as your common enemy. These aims are not impossible of accomplishment, for what is already in two minds, and readily appears the most feasible to those who have reflected upon it, can hardly be called impossible by any man of understanding. By the "two minds" I mean that of Hipparinus, the son of Dionysius, and that of my own son; when these two have come to an agreement, I think all others in Syracuse who care for their city will give their assent. c

"Now offer honor and prayers to all the gods and to all other beings to whom, with the gods, honor belongs, persuading and exhorting friends and opponents gently but unceasingly, until the plans that I have just described, like the dreams that God sends to waking men, have been d brought to visible and happy realization."

IX

PLATO TO ARCHYTAS OF TARENTUM,[1] WELFARE.

Archippus and Philonides and their companions have come to me with the letter you gave them and have brought me news of you. Their mission to e the city they accomplished with no difficulty, since it was not a burdensome matter. But as to you, they reported that you think it a heavy trial not to be able to get free from the cares of public life. It is indeed one of the sweetest things in life to follow one's own interests, especially when they 358 are such as you have chosen; practically everyone would agree. But this also you must bear in mind, that none of us is born for himself alone; a part of our existence belongs to our country, a part to our parents, a part to our other friends, and a large part is given to the circumstances that

1. Pythagorean philosopher and mathematician, who was also a leading statesman of his native city, in southern Italy. Plato visited there shortly before 388 B.C.

command our lives. When our country calls us to public service it would,
b I think, be unnatural to refuse; especially since this means giving place to unworthy men, who enter public life for motives other than the best.

Enough of this. As for Echecrates, I am taking care of him and will do so in the future, both for your sake and the sake of his father Phrynion as well as for the young man himself.

X

PLATO TO ARISTODORUS, WELFARE.

c I hear from Dion that you are one of his most trusted followers and have been so from the beginning, manifesting the most philosophical of the philosophical virtues; for to be steadfast, loyal, and dependable—this, I say, is true philosophy; whereas all other learning, and all cleverness directed to any other end than this, I call—and I think rightly—mere ornaments. Farewell; hold fast to these virtues that you have thus far manifested.

XI

d PLATO TO LAODAMAS, WELFARE.

I have written you before that the matters you have mentioned will all be greatly advanced if you yourself can come to Athens; but since you say that is impossible, the next best thing would be, as you write, that I
e or Socrates[1] should come to you, if we can. But Socrates is ill with strangury, and it would be unseemly for me to come and not accomplish what you summoned me for. For my part I have little hope that it can be done, though to explain why would require another and longer letter giving all the reasons; and besides, at my time of life I have not the bodily strength for travel and for all the dangers that one encounters both by land and by sea, and at present all the circumstances of travel are full of danger. I can, however, give you and the leaders of your colony a piece of advice
359 which, when I have spoken it, "may seem trifling," to quote Hesiod, but is hard to take. If they think[2] that a constitution can ever be well established by the enactment of laws, of whatever sort they may be, without some authority in the city to look after the daily life of the citizens and to insure that both free men and slaves live in a temperate and manly fashion, they are thinking wrongly. This could be done, however, if you have at hand
b men worthy of exercising such authority; but if you lack an educator, then

1. This is the younger Socrates, who figures as one of the personages in the *Statesman.*
2. Accepting the emendation *oiontai* in a3.

you have neither teachers nor learners, as I see it, and no course is left but to pray to the gods. Indeed most cities in the past have been similarly established and later attained good government under the force of circumstances brought on by war or other enterprises of the city, when a man of nobility and character has appeared and exercised great power. In the meantime you must and should ardently desire this to happen; but reflect on what I have said and do not act lightly, thinking that success is within c
your grasp. Good luck!

XII

PLATO TO ARCHYTAS OF TARENTUM,[1] WELFARE.

I am overjoyed at receiving the treatises that have come from you and am filled with admiration for their author, who seemed to me a man d
worthy of his ancient ancestors. These ancestors are said to have been Myrians, and to have been among the Trojans who emigrated under Laomedon. Good men they were, according to the accepted legend. As to the writings of mine about which you wrote, they are not yet completed, but I am sending them to you as they are. We are agreed that they ought e
to be guarded, so I need not admonish you on that point.

(Some have contended that this letter is not Plato's.)[2]

XIII

PLATO TO DIONYSIUS, TYRANT OF SYRACUSE, WELFARE. 360

Let this beginning of my letter be likewise a sign to you that it comes from me.[3] Once when you were feasting the young men from Locri you arose and came over to me (your couch being at some distance from mine) and greeted me with a phrase that was both friendly and neatly turned, as it seemed to me. The man lying next to me (and a fair youth he was) b
thought so too, for he said: "I suppose, Dionysius, that you have got much wisdom from Plato?" "And much else besides," you said; "for from the very minute I sent for him, and by the very fact that I had sent for him, I was the gainer." So let us preserve this opinion and endeavor always to increase our usefulness to one another. It is for this very purpose that I am sending you some Pythagorean writings and some *Divisions*, and also a man whom we thought, you remember, that both you and Archytas, if Archytas comes to you, could use to advantage. His name is Helicon, his c

1. See note to 357d above.
2. This notation is found in our best manuscripts, and may go back to Thrasyllus.
3. Because of its salutation "Welfare," for the usual "Greetings": see *Letter* III, 315a.

family is of Cyzicus, and he is a disciple of Eudoxus[4] and well versed in all that eminent man's doctrines. Moreover he has been associated with one of the pupils of Isocrates and with Polyxenus, one of the followers of Bryson. But, what is rarer with such men, he is pleasant to meet, seemingly
d not difficult, but easy and mild mannered. I put it thus cautiously, for it is a man I am giving my opinion of; and though man has his good qualities, he is, with rare exceptions and in the greater part of his actions, quite changeable. I had my fears and doubts even about this man, so I not only conversed with him myself but also made inquiry among his fellow citizens, and nobody had anything to say against him. But look him over yourself and be on your guard. Above all, if you can in any way find leisure for it, take lessons from him as part of your studies in philosophy.
e If not, have him instruct someone else so that when you do have leisure you can learn and thereby add to your character and your good name. In this way I shall continue to be of help to you. But enough of this.

361 As for the things you wrote me to send you, I have had the Apollo executed and Leptines is bringing it to you, the work of a good young sculptor whose name is Leochares. There was another piece in his shop that I thought very charming, and I therefore bought it to give to your wife, for she looked after me, both in health and in sickness, in a manner that did honor both to me and to you. Give it to her, then, if you think it fitting. I am also sending twelve jars of sweet wine and two jars of honey
b for the children. I arrived too late for the fig harvest, and the myrtle berries that were laid by have spoiled. We shall look after them better next time. Leptines will tell you about the plants.

The money for these purchases and for certain payments to the city I procured from Leptines, telling him (what I thought was quite proper as well as true) that the money we spent in fitting out the Leucadian ship, about sixteen minae, came from my funds. So I got this sum from him,
c have made use of it, and have sent these objects to you. Now hear how it stands with respect to your funds here at Athens, and mine. I will make use of your money, as I told you, just as I do that of my other friends; but I am using it as sparingly as I can, and only so much as seems necessary or just or proper, not to me only, but to your agent. My own situation is this. Four daughters were left by my nieces (who died at the time when
d you bade me wear a crown, you remember, but I refused), one of marriageable age, another eight years old, another a little over three, and the other not yet one. My friends and I must provide dowries for them, at least for those who are married during my lifetime; the others we may leave out of account. Nor need I provide for those whose fathers may become richer than I am; but at present I am the wealthiest, and it was I who, with the
e help of Dion and other friends, provided dowries for their mothers. The oldest of these girls is to marry Speusippus, whose sister's daughter she is. For her I will require at most thirty minae; that is a reasonable wedding

4. Eudoxus of Cnidus, one of the foremost mathematicians of the fourth century, had moved his school from Cyzicus to Athens and merged it with the Academy.

portion for us to give. Moreover, if my mother should die I should need almost ten minae for building her tomb. These are about all my obligations at present. If any other private or public expense comes up because of my visit to you, I will endeavor to make the expenditure as little as possible; but what I cannot avoid will have to be at your charge, as I told you must 362
be the case.

Now a word regarding your funds at Athens and their expenditure. In the first place, if it should ever be necessary for me to fit out a chorus or anything of the sort, you have no guest-friend here who would advance the money, as we thought. Furthermore, if some matter of great importance to you should arise such that you would be benefited immediately if an expenditure were made but injured if it were not made or were delayed until word had come from you, the situation would be not only damaging but humiliating for you. I found this out myself when, wishing to send b
you some other and more costly articles that you had written for, I sent Erastus to Andromedes the Aeginetan, upon whom, as your guest-friend, you told me to draw if I needed money. He replied, as was only human and natural, that he had formerly advanced money for your father but had had difficulty in collecting it; so now he would give a small sum, but no more. And so I got it from Leptines, who deserves to be praised, not because he gave, but because he gave willingly; and in all else that he has done and said about you he has shown the quality of his friendship. I c
ought to report such things, as well as matters of an opposite sort, to show how I think this or that man is disposed towards you. And so I shall be frank with you about your money; since it is only right, and since moreover I can speak from experience of the men who surround you. Whenever your men bring in their reports, they hesitate to mention any matter that they think involves expense, for fear of your displeasure. You must there- d
fore compel them to form the habit of speaking about these things as well as other matters; for it is your duty to know everything, so far as possible, and pass judgment and not shrink from any facts. This will be the best of all ways of enhancing your authority. To make expenditures rightly and to repay debts properly is a good thing in many ways, and even furthers the acquisition of money, as you yourself will see more and more. Then do not allow those who profess to be looking out for your interests to give you a bad name; for there is no advantage nor honor in being known as difficult in money matters. e

And now I would say something about Dion. About the other matters at issue I can say nothing as yet, until the letters come which you say you are sending me; but on the subject which you forbade me to mention to him, though I have not mentioned nor spoken about it, I have tried to find out how he would take it if you carried out your design, and it seemed to me he would be not a little indignant. In every other respect Dion's attitude toward you, as shown in his words and actions, is quite temperate.

To Cratinus, the brother of Timotheus and my friend, let us give a hoplite 363
breastplate, one of the light kind for foot soldiers; and to the daughters of Cebes three full-length chitons, not the expensive Amorgian ones, but

linen ones of Sicilian make. You are probably familiar with the name of Cebes, for he figures in the Socratic writings as taking part with Simmias in a discussion with Socrates about the soul. He is an intimate friend and well disposed towards us all.

363b You no doubt recall the sign that distinguishes the letters I write that are seriously intended from those that are not. Still I would have you attend carefully and keep it in mind; for there are many who ask me to write whom it is not easy to refuse openly. Those that are seriously meant begin with "God"; those less seriously with "gods."

The ambassadors also asked me to write you, and quite properly; for they have everywhere been sounding your praises and mine, not least of c all Philagrus, the one who had a sore hand, you remember. Philaedes, who has just returned from the Great King, also spoke of you. If it had not required too long a letter I should have written you what he said; but as it is you must ask Leptines.

If you send the breastplate or anything else that I have mentioned, and have no one you wish to send it by, give it to Tyrillus; for he is always traveling back and forth, and is a friend of mine, accomplished in philosophy and other matters. He is the son-in-law of Tison, who was civic magistrate at the time when I set sail.

Farewell, study your philosophy, and try to interest the other young d men in it. Give my greetings to your fellow students of the spheres. Instruct Aristocritus and the rest that if any book or letter comes from me, they are to have it brought at once to your attention and to remind you to pay heed to its contents. And now do not neglect to repay Leptines the money he advanced, but do it promptly so that others, seeing your treatment of him, may be more willing to oblige you.

e Iatrocles, whom I set free at the same time as Myronides, is traveling with the things I am now sending you. Put him in your pay, since he bears you good will, and use him for any service you wish. Preserve this letter, or an abstract of it, and take it to heart.[5]

5. Accepting the deletion of *ho* in e5.

DEFINITIONS

Definitions *is a dictionary of about 185 philosophically significant terms. Many intellectuals in ancient Greece developed definitions: mathematicians, natural philosophers, educators such as Prodicus, and also Socrates, who believed that knowing correct definitions of ethical ideas would make people morally better. But it was Plato who urged a systematic approach to definition by collection and division in his* Phaedrus *and practiced it in his* Sophist *and* Statesman. *The Academic enterprise of definition by division was satirized in a comedy of about 350* B.C., *in which members of Plato's Academy cogitated over the definition of 'pumpkin' (Epicrates, frg. 11 Edmonds). Diogenes the Cynic ridiculed the Academic definition of 'man' as 'featherless, two-footed animal' by plucking a chicken and saying, "Here's Plato's man!"*

Many philosophers after Plato were also interested in definitions: his nephew and successor as head of the Academy, Speusippus, was credited with a work called Definitions, *and in a list of Aristotle's works we find "*Definitions *(in thirteen books)" and "*Definitions prefixed to the Topics *(in seven books)." Theophrastus wrote three books of* Definitions, *and Chrysippus the Stoic wrote many large books of and about definitions. Certain similarities between definitions in the present collection and Aristotelian and Stoic definitions have inclined some scholars to regard* Definitions *as a late and eclectic work, but these similarities are perhaps better explained by the fact that Aristotle and the Stoics both made use of fourth-century Academic ideas in working out their own philosophical positions.*

What we find in Definitions *is probably a tiny selection of all the definitions formulated and discussed in Plato's Academy in the middle years of the fourth century. These definitions were used in dialectical discussions, of the kind familiar to us from Aristotle's* Topics *and* Sophistical Refutations. *The definition of 'man' at 415a as 'featherless, two-footed,* flat-fingernailed *animal' could be a response to Diogenes' chicken, and other definitions are probably dialectical as well. Some are drawn directly from Plato's dialogues, such as the definition of 'sophist' at 415c, from* Sophist *231d.*

The individual definitions were probably coined by members of the Academy in the fourth century B.C., *but we cannot know who edited them into the present collection. Indeed,* Definitions *seems to consist of two separate collections. The first collection is organized into the three branches of philosophy recognized by Plato's Academy and by the Stoics: philosophy of nature (411 a–c), ethics (411d–414a), philosophy of knowledge and language (414a–e). The second collection (from 'utility' at 414e onward) has no such internal*

organization and contains independent definitions of many of the terms defined in the first collection. Certainly Plato is not to be regarded as the editor of all or part of Definitions, *and the ascription to "Plato" probably signifies nothing more than "school of Plato." Some ancient scholars guessed at Speusippus as their author, probably incorrectly.*

Since reference works and collections such as Definitions *are not written in ordinary prose, they are especially liable to corruption in the course of transmission. That is why this translation involves a particularly high degree of guesswork, both about the text itself and about its proper construal. Some definitions have probably fallen out accidentally, and some may possibly have been interpolated by later ancient scribes and scholars.*

D.S.H.

411 ἀίδιον (*aïdion*), eternal: existent at all times, including past and present, without being destroyed.

θεός (*theos*), god: immortal living being, self-sufficient for happiness; eternal being, the cause of the nature of goodness.

γένεσις (*genesis*), becoming: change into being; coming to participate in being; passing into existence.

ἥλιος (*hēlios*), sun: the only celestial fire which is visible to the same people from dawn to
b dusk; the daylight star; the largest eternal living creature.

χρόνος (*chronos*), time: the motion of the sun, the measure of its course.

ἡμέρα (*hēmera*) day: the journey of the sun, from rising to setting; the light opposed to the night.

ἕως (*heōs*), dawn: the beginning of the day; first light of the sun.

μεσημβρία (*mesēmbria*), midday: the time at which the shadows of bodies are all at their shortest.

δείλη (*deilē*), sunset: the end of the day.

νύξ (*nux*), night: the darkness opposed to day; the absence of the sun.

τύχη (*tuchē*), luck: passage from the unclear to the unclear; spontaneous cause of a supernatural event. c

γῆρας (*gēras*), old age: deterioration of a living thing due to the passage of time.

πνεῦμα (*pneuma*), wind: movement of air in the region of the earth.

ἀήρ (*aēr*), air: the element to which every spatial motion is natural.

οὐρανός (*ouranos*), sky: the body which surrounds all perceptible things except the uppermost air itself.

ψυχή (*psuchē*), soul: that which moves itself; the cause of vital processes in living creatures.

δύναμις (*dunamis*), ability: that which produces results on account of itself.

ὄψις (*opsis*), vision: the state of being able to discern bodies.

ὀστοῦν (*ostoun*), bone: marrow hardened by heat.

Translated by D. S. Hutchinson.

στοιχεῖον (*stoicheion*), element: that which complex things are composed of and resolved into.

d ἀρετή (*aretē*), virtue: the best disposition; the state of a mortal creature which is in itself praiseworthy; the state on account of which its possessor is said to be good; the just observance of the laws; the disposition on account of which he who is so disposed[1] is said to be perfectly excellent; the state which produces faithfulness to law.

φρόνησις (*phronēsis*), practical wisdom: the ability which by itself is productive of human happiness; the knowledge of what is good and bad; the knowledge that produces happiness;[2] the disposition by which we judge what is to be done and what is not to be done.

δικαιοσύνη (*dikaiosunē*), justice: the unanimity of the soul with it-

e self, and the good discipline of the parts of the soul with respect to each other and concerning each other; the state that distributes to each person according to what is deserved; the state on account of which its possessor chooses what appears to him to be just; the state underlying a law-abiding way of life; social equality; the state of obedience to the laws.

σωφροσύνη (*sōphrosunē*), self-control: moderation of the soul concerning the desires and pleasures that normally occur in it; harmony and good discipline in the soul in respect of normal pleasures and pains; concord of the soul in respect of ruling and being ruled; normal personal independence; good discipline in the soul; rational agreement within the soul about what is 412 admirable and contemptible; the state by which its possessor chooses and is cautious about what he should.

ἀνδρεία (*andreia*), courage: the state of the soul which is unmoved by fear; military confidence; knowledge of the facts of warfare; self-restraint in the soul about what is fearful and terrible; boldness in obedience to wisdom; being intrepid in the face of death; the state which stands on guard over correct thinking in dangerous situations; force which counterbalances danger; force of fortitude in respect of virtue; calm in the soul about what correct thinking takes to be frightening or encouraging things; the preservation of fear- b less[3] beliefs about the terrors and experience of warfare; the state which cleaves to the law.

ἐγκράτεια (*enkrateia*), self-restraint: the ability to endure pain; obedience to correct thinking; the unbeatable ability of the conceptions of correct thinking.

αὐτάρκεια (*autarkeia*), self-sufficiency: perfect possession of good things; the state in respect of which those who have it are masters of themselves.

1. Omitting *echon* in d3.
2. Reading *epistēmē poiētikē eudaimonias* after *kakōn* in d6 (a misprint in Burnet).
3. Accepting the conjecture *adeilōn* for *adēlōn* in b1.

ἐπιείκεια (*epieikeia*), fairness: ceding one's rights and advantages; moderation in agreements; the good discipline of a rational soul in respect of what is
c admirable and contemptible.

καρτερία (*karteria*), fortitude: endurance of pain for the sake of what is admirable; endurance of labor for the sake of what is admirable.

θάρσος (*tharsos*), confidence: not foreseeing anything bad; being undisturbed by the presence of something bad.

ἀλυπία (*alupia*), painlessness: the state in respect of which we are not subject to suffering pain.

φιλοπονία (*philoponia*), industriousness: the state which accomplishes what one has proposed; voluntary fortitude; irreproachable state in respect of labor.

αἰδώς (*aidōs*), modesty: voluntarily drawing back from reckless behavior, according to what is right and seems best; voluntarily holding to what is best; being cautious to avoid justified
d criticism.

ἐλευθερία (*eleutheria*), freedom: being in control of one's life; having sole authority in all respects; power to do what one likes in life; being unsparing in using and possessing property.

ἐλευθεριότης (*eleutheriotēs*), liberality: the proper state in respect of money-making; appropriate expenditure[4] and saving of property.

πραότης (*praiotēs*), even temper: suppression of the impulse caused by anger; an harmonious blend of the soul.

κοσμιότης (*kosmiotēs*), decorum: voluntary submission to what seems best; being disciplined in moving the body.

εὐδαιμονία (*eudaimonia*), success in life: the good composed of all goods; an ability which suffices for living well; perfection in respect of virtue; resources sufficient for a living creature. e

μεγαλοπρέπεια (*megaloprepeia*), magnificence: being estimable, according to the correct reasoning of the most dignified of men.[5]

ἀγχίνοια (*anchinoia*), quick wit: talent of the soul which enables its possessor to hit upon what is necessary in each case; mental penetration.

χρηστότης (*chrēstotēs*), honesty: moral sincerity, together with intelligence; excellence of character.

καλοκαγαθία (*kalokagathia*), moral perfection: the state which decides to do the best things.

μεγαλοψυχία (*megalopsuchia*), magnanimity: nobility in dealing with events; magnificence of soul, together with reason.

φιλανθρωπία (*philanthrōpia*), love of humanity, or kindness: the easy-going character state of being friendly to people; the state of being helpful to people; the trait of gratefulness; memory, together with helpfulness.

εὐσέβεια (*eusebeia*), piety: justice concerning the gods; the ability to serve the gods voluntarily; 413
the correct conception of the

4. Accepting the conjecture *proesis* for *prosthesis* in d4–5.

5. Accepting the conjecture *tou semnotatou* in e2–3.

honor due to gods; knowledge of the honor due to gods.

ἀγαθόν (*agathon*), good: that which is for its own sake.

ἀφοβία (*aphobia*), fearlessness: the state in which we are not subject to fear.

ἀπάθεια (*apatheia*), passionlessness: the state in which we are not subject to passions.

εἰρήνη (*eirēnē*), peace: a quiet period in respect of military conflict.

ῥᾳθυμία (*rāithumia*), laziness: inertia of the soul; having no passion in the spirited part.

δεινότης (*deinotēs*), cleverness: the disposition which enables its possessor to hit upon his particular objective.

φιλία (*philia*), friendship: agreeing about what is admirable and just; deciding on the same way of life; having the same views about moral decision and moral
b conduct; agreeing on a way of life; sharing on the basis of benevolence; sharing in rendering and accepting favors.

εὐγένεια (*eugeneia*), nobility: the virtue of a noble character; a soul well cultivated in words and deeds.

αἵρεσις (*hairesis*), selection: correct evaluation.

εὔνοια (*eunoia*), benevolence: kindliness of a man towards another.

οἰκειότης (*oikeiotēs*), kinship: sharing in the same descent.

ὁμόνοια (*homonoia*), agreement: sharing everything that is on one's mind;[6] harmony of thoughts and assumptions.

ἀγάπησις (*agapēsis*), contentment: welcoming everything.

πολιτική (*politikē*), political skill: the knowledge of what is admirable and useful; the knowledge of how to produce justice in a city. c

ἑταιρία (*hetairia*), camaraderie: the friendship among people of the same age formed by keeping company with each other.

εὐβουλία (*euboulia*), good counsel: the inborn virtue of reasoning.

πίστις (*pistis*), faith: the conception[7] that things are as they appear to one; firmness of character.

ἀλήθεια (*alētheia*), truth, veracity: the correct state expressed in affirmation and denial; knowledge of truths.

βούλησις (*boulēsis*), will: wanting, based on correct reason; reasonable desire; natural desire, based on reason.

συμβούλευσις (*sumbouleusis*), consultation: advice to another person about conduct, how he should conduct himself.

εὐκαιρία (*eukairia*), good timing: hitting upon the right time to do something or have something done to one. d

εὐλάβεια (*eulabeia*), caution: being on guard against what is bad; being sure to be on guard.

τάξις (*taxis*), order: functional similarity in all the mutual elements of a whole; due proportion in a society; cause of all the mutual elements of a whole; due proportion in respect of learning.[8]

6. Accepting the conjecture *tōn en nōi ontōn* for *tōn ontōn* in b8.
7. Accepting a conjectural transposition of *orthē* from c4 to c6.
8. Reading *summetria pros to mathein* in d4.

προόσεξις (*prosexis*), attention: the effort the soul makes to learn something.

εὐφυΐα (*euphuïa*), talent: speed in learning; good natural[9] inheritance; natural virtue.

εὐμάθεια (*eumatheia*), cleverness: the mental talent to learn quickly.

δίκη (*dikē*), judgment, trial: authoritative declaration about a disputed matter; dispute[10] about whether or not there has been
e injustice.

εὐνομία (*eunomia*), law-abidingness: obedience to good laws.

εὐφροσύνη (*euphrosunē*), cheerfulness: joy in doing what a temperate man does.

τιμή (*timē*), honor: the gift of good things given for virtuous deeds; the dignity conferred by virtue; dignified bearing; the cultivation of one's dignity.

προθυμία (*prothumia*), zeal: manifestation of an active will.

χάρις (*charis*), charity: voluntary beneficence; giving up something good which is of service at an opportune moment.

ὁμόνοια (*homonoia*), concord: opinion shared between those who govern and those who are governed about how to govern and be governed.

πολιτεία (*politeia*), republic: community of many men, self-sufficient for living successfully; community of many under the
414 rule of law.

πρόνοια (*pronoia*), foresight, providence: preparation for some future event.

βουλή (*boulē*), deliberation: investigation about what would be beneficial in the future.

νίκη (*nikē*), victory: ability triumphant in a competition.

εὐπορία (*euporia*), inventiveness: good judgment which triumphs over something said.

δωρεά (*dōrea*), gift: exchange of favors.

καιρός (*kairos*), opportunity: the ideal time for something beneficial; the time that contributes to obtaining something good.

μνήμη (*mnēmē*), memory: disposition of the soul which guards over the truth which resides in it.

ἔννοια (*ennoia*), reflection: intense thinking.

νόησις (*noēsis*), intuition: the starting point of knowledge.

ἁγνεία (*hagneia*), piety: caution about mistakes with respect to the gods; paying service, in a normal way, to the honor of a god. b

μαντεία (*manteia*), divining: the knowledge which predicts events without proof.

μαντική (*mantikē*), divination: the knowledge which contemplates the present and future of mortal beings.

σοφία (*sophia*), wisdom: non-hypothetical knowledge; knowledge of what always exists; knowledge which contemplates the cause of beings.

φιλοσοφία (*philosophia*), philosophy: desire for the knowledge of what always exists; the state which contemplates the truth,

9. Reading *phuseōs* in d6.

10. Accepting the conjectural restoration *Dikē˙ apophasis . . . pragmatos˙ amphisbētēsis peri tou adikein ē mē.*

what makes it true; cultivation of the soul, based on correct reason.

ἐπιστήμη (*epistēmē*), knowledge: conception of the soul which cannot be dislodged by reasoning; ability to conceive one or more things which cannot be dislodged by reasoning; true argument which cannot be dislodged by thinking.

δόξα (*doxa*), opinion: conception which is open to persuasion by reason; fluctuation in reasoning; the thinking which is led by reason to the false as well as the true.

αἴσθησις (*aisthēsis*), perception: fluctuation in the soul; movement of the mind via the body;[11] an announcement for the benefit of human beings, from which arises a non-rational ability in the soul to recognize things through the body.

ἕξις (*hexis*), state: disposition of the soul on account of which people are said to be of a certain sort.

φωνή (*phōnē*), voiced sound: an emission of thought through the mouth.

λόγος (*logos*), speech: voice articulated in letters capable of indicating each existing thing; linguistic sound compounded of nouns and verbs, without music.

ὄνομα (*onoma*), noun: uncompounded linguistic sound expressing both what is predicated in the essence and everything which is not said of a thing in its own right.

διάλεκτος (*dialektos*), language, linguistic expression: human sound with letters; a common sign which is expressive, without music.

συλλαβή (*sullabē*), syllable: articulation of the human voice that can be written.

ὅρος (*horos*), definition: something said, comprised of genus and differentia.

τεκμήριον (*tekmērion*), evidence: proof of the non-evident.

ἀπόδειξις (*apodeixis*), proof: true argument reasoning to a conclusion; argument that declares something through what is previously known.

στοιχεῖον φωνῆς (*stoicheion phōnēs*), element of voiced sound: uncompounded voiced sound, the reason that the other voiced sounds are voiced sounds.

ὠφέλιμον (*ōphelimon*), utility: what causes something to be well off; what causes good.

συμφέρον (*sumpheron*), beneficial: what conduces to the good.

ἀγαθόν (*agathon*), good: what causes the preservation of beings; the cause toward which everything tends, from which is derived what should be chosen.

σῶφρον (*sōphron*), self-controlled: being orderly in the soul.

δίκαιον (*dikaion*), just: prescription of law which produces justice.

ἑκούσιον (*hekousion*), voluntary: what produces its own action; what is chosen for itself; what is achieved with thinking.

ἐλεύθερον (*eleutheron*), free: what rules itself.

11. Moving the semicolon from after *kinēsis* to after *sōmatos* in c5, and deleting *psuchēs*.

μέτριον (*metrion*), moderate: in between excess and insufficiency, satisfying the strictures of skill.
μέτρον (*metron*), measure: the mean between excess and insufficiency.
ἆθλον ἀρετῆς (*athlon aretēs*), prize of virtue: the reward worth choosing for its own sake.
ἀθανασία (*athanasia*), immortality: the eternal duration of a living substance.[12]
ὅσιον (*hosion*), holy: service to a god which is agreeable to the god.
ἑορτή (*heortē*), festival: time that is sacred by law.
ἄνθρωπος (*anthrōpos*), man: wingless, two-footed, flat-fingernailed animal; the only being capable of acquiring
b rational knowledge.
θυσία (*thusia*), sacrifice: offering of a victim to a god.
εὐχή (*euchē*), prayer: request by men to the gods for what is good or seems good.
βασιλεύς (*basileus*), king: an officer who is legally beyond accountability; an officer of a political organization.
ἀρχή (*archē*), command: being in charge of everything.
ἐξουσία (*exousia*), legal authority: discretionary power granted by law.
νομοθέτης (*nomothetēs*), lawgiver: the maker of the laws under which a city is to be governed.
νόμος (*nomos*), law: political judgment of many people, not limited to a certain time.
ὑπόθεσις (*hypothesis*), hypothesis: indemonstrable first principle; summary of the principal points in a discourse.
ψήφισμα (*psēphisma*), decree: political judgment limited to a certain time. c
πολιτικός (*politikos*), statesman: one who knows how to organize a city.
πόλις (*polis*), city-state: the place of residence of a number of men who follow decisions made in common; a number of men being under the same law.
πόλεως ἀρετή (*poleōs aretē*), virtue of a city: the establishment of a good constitution.
πολεμική (*polemikē*), military skill: having experience of war.
συμμαχία (*summachia*), military alliance: community of warring parties.
σωτηρία (*sōtēria*), preservation: keeping safe and sound.
τύραννος (*turannos*), dictator: an officer of a city who rules according to his own ideas.
σοφιστής (*sophistēs*), sophist: paid hunter of rich and distinguished young men. d
πλοῦτος (*ploutos*), wealth: having sufficient possessions to live happily; an abundance of property which conduces to happiness.
παρακαταθήκη (*parakatathēkē*), deposit: something given on trust.
κάθαρσις (*katharsis*), purification: the separation of the worse from the better.
νικᾶν (*nikan*), being victorious: prevailing in a conflict.
ἀγαθὸς ἄνθρωπος (*agathos anthrōpos*), good person: the sort of person who can achieve what is good for a human being.

12. Accepting the emendation *ousias empsuchou aïdios monē* in a8.

σώφρων (*sōphrōn*), self-controlled: person having moderate desires.
ἐγκρατής (*enkratēs*), self-restrained: one who overpowers the parts of the soul when they are contrary to right reason.
σπουδαῖος (*spoudaios*), excellent: he who is completely good; he who has the virtue proper to human
e beings.
σύννοια (*sunnoia*), worry: an irrational and disturbing thought.
δυσμαθία (*dusmathia*), stupidity: slowness in learning.
δεσποτεία (*despoteia*), rule over slaves: just authority which is accountable to nobody.
ἀφιλοσοφία (*aphilosophia*), lack of philosophy: the state whose possessor is a hater of argument.
φόβος (*phobos*), fear: consternation of the soul in expectation of something bad.
θυμός (*thumos*), passion: forceful impulse of the non-rational part of the soul, without being ordered by reasoning and thought.[13]
ἔκπληξις (*ekplēxis*), consternation: fear in the expectation of something bad.
κολακεία (*kolakeia*), flattery: keeping company for the sake of pleasure, without considering what is best; the state of socializing for pleasure in excess of what is moderate.
ὀργή (*orgē*), anger: the urging of the passionate part of the soul for vengeance.
ὕβρις (*hubris*), assault: injustice driving one to dishonor
416 someone.
ἀκρασία (*akrasia*), lack of self-restraint: the violent state, without correct reasoning, which is oriented towards what seems to be pleasant.
ὄκνος (*oknos*), laziness: running away from labor; cowardice which paralyzes impulses.
ἀρχή (*archē*), origin: first cause of being.
διαβολή (*diabolē*), slander: the alienation of friends by speech.
καιρός (*kairos*), opportunity: the time it is appropriate to do each thing or undergo it.
ἀδικία (*adikia*), injustice: the state of despising the laws.
ἔνδεια (*endeia*), poverty: being short of goods.
αἰσχύνη (*aischunē*), shame: fear in expectation of bad reputation.
ἀλαζονεία (*alazoneia*), pretentiousness: the state which makes those who lack a good or goods pretend to have it or them.
ἁμαρτία (*hamartia*), error: an action against correct reasoning.
φθόνος (*phthonos*), envy: being distressed by the goods of one's friends, either present or past.
ἀναισχυντία (*anaischuntia*), shamelessness: the state of the soul which endures dishonor for the sake of profit.
θρασύτης (*thrasutēs*), temerity: excessive boldness in face of dangers which one should not face.
φιλοτιμία (*philotimia*), vanity: the state of the soul which is lavish with every expense without thinking.
κακοφυΐα (*kakophuïa*), bad nature: badness in nature and an error of what is natural; disease of what is natural.
ἐλπίς (*elpis*), hope: the expectation of good.

13. Emending *nous taxeōs* to *kai nou taxeōs* in e6.

416 μανία (*mania*), madness: the state which is destructive of true conception.

λαλιά (*lalia*), talkativeness: irrational lack of self-restraint in speech.

ἐναντιότης (*enantiotēs*), contrariety: the greatest distance between objects of the same genus which fall under some difference.

ἀκούσιον (*akousion*), involuntary: what is accomplished without thinking.

παιδεία (*paideia*), education: the ability that is of service to the soul.

παίδευσις (*paideusis*), educating: bestowing education.

νομοθετική (*nomothetikē*), legislative skill: knowledge of how to produce a good city.

νουθέτησις (*nouthetēsis*), admonition: speech which blames with judgment; speech for the sake of keeping someone from a mistake.

βοήθεια (*boētheia*), help: the prevention of something bad, either present or about to happen.

κόλασις (*kolasis*), chastisement: treatment given to a soul concerning a past mistake.

δύναμις (*dunamis*), ability: superiority in word or deed; the state which makes its possessor be able; natural strength.

σώζειν (*sōizein*), save: to keep safe and sound.

ON JUSTICE

Socrates discusses with a friend several disjointed questions about justice. He makes the following points: it is speech that decides what is just and unjust (though that does not answer the question what the just is*); the same acts can be just or unjust, depending on the situation; justice is knowledge of the right time to do things; people who are unjust are unwillingly unjust. All these are familiar Socratic ideas, presented in an unusually bald and unattractive format.*

On Justice *verges on incoherence because of its brevity and abrupt transitions. One explanation might be that it is not an original work, but is excerpted or adapted from earlier Socratic literature. The argument that the same actions (even deceiving and stealing) are sometimes just and sometimes unjust, depending on the situation, is urged by Socrates in Xenophon,* Memoirs of Socrates *IV.ii.12–20, and Plato has Socrates use a similar argument for situational ethics (*Republic *331b–d). Xenophon often adapted earlier Socratic texts, in this case apparently the same text or texts as the author or compiler of* On Justice.

That Socrates argued for the propriety of deceiving and stealing was one of the complaints urged by Polycrates in his Accusation of Socrates*, written in 393/2* B.C. *(a speech now lost but whose contents can be partly inferred from the various replies it provoked, especially the* Apology *of Libanius, the fourth century* A.D. *teacher of rhetoric). If Polycrates was replying to a Socratic source excerpted or adapted by the author of* On Justice*, we can only guess which it was, but the most attractive possibility is a (now lost) dialogue by Antisthenes called* On Law *or* On Rightness and Justice.

*Plato's influence can be felt at one point only: when Socrates argues, apparently needlessly, that since people are unwillingly unjust their unjust conduct must also be unwilling, the author is insisting on a point that Plato felt he needed to insist on at the end of his life (*Laws *860c–e). If the dialogue was intended to support Plato's view, it can be dated to after the middle of the fourth century* B.C.*, perhaps well after.*

Some manuscripts of On Justice *list as speakers 'Socrates, Friend', others say 'Socrates, Anonymous', and one says 'Socrates, Clinias'; that Socrates is a speaker is clear from the dialogue itself, but the other three appellations are evidently guesses by later scholars. So it seems to have been transmitted during antiquity without any indication of who the speakers were. The same is true of the dialogue labeled* On Virtue*; these two dialogues also lack titles of a normal Platonic sort and may be among those said in ancient lists of Platonic works to*

be 'without a heading'. In this translation, we have decided to call the unknown interlocutor 'Friend'.

D.S.H.

372 SOCRATES: Can you tell us what the just is, or don't you think it's worthwhile to discuss this?

FRIEND: I think it would be very worthwhile.

SOCRATES: What is the just, then?

FRIEND: Well, what could it be, if not what's established as just by custom?

SOCRATES: That's not the way to answer. If you were to ask me what an eye is, I'd tell you it's what we see with; and if you demand that I prove it, I'll prove it. And if you ask me what "soul" is the name of, I'll tell you it's what we think with. And if, again, you ask me what voice is, I'll answer that it's what we converse with. In this same way, now tell me what the just is, by referring to how we use it, like I've now done with these other things.

FRIEND: I can't possibly answer you that way.

SOCRATES: Well, since you can't do it that way, would it perhaps be easier for us to discover it in this sort of way? Now, when we want to distinguish what's longer and what's shorter, with what do we examine them? Isn't it with a measuring-stick?

FRIEND: Yes.

373 SOCRATES: Besides the measuring-stick, what skill do we use? Isn't it skill in measuring?

FRIEND: Right, skill in measuring.

SOCRATES: And what about distinguishing what's light and what's heavy? Don't we do that with a scale?

FRIEND: Yes.

SOCRATES: Besides the scale, what skill do we use? Isn't it skill in weighing?

FRIEND: Definitely.

SOCRATES: Well, then, when we want to distinguish what's just and what's unjust, what instrument do we use to examine them? And, besides this instrument, what skill do we use in dealing with them? Or doesn't this way make it clear to you either?

FRIEND: No.

SOCRATES: Well, let's start again. Whenever we disagree about what's larger and what's smaller, who are the ones who decide between us? Aren't they the ones who measure?

FRIEND: Yes.

b SOCRATES: And whenever we disagree about number, about many and few, who are the ones who decide? Aren't they the ones who count?

FRIEND: Obviously.

Translated by Andrew S. Becker.

SOCRATES: Whenever we disagree with each other about what's just and what's unjust, to whom do we go? Who are those who decide between us in each case? Tell me.

FRIEND: Are you talking about judges, Socrates?

SOCRATES: Well done! Now go on and try to tell me this: What are the measurers doing when they decide about what's large and what's small? They're measuring, aren't they?

FRIEND: Yes.

SOCRATES: And when the weighers decide about what's heavy and what's light, aren't they weighing?

FRIEND: Of course they're weighing.

SOCRATES: And when the counters decide about many and few, they're counting, aren't they?

FRIEND: Yes.

SOCRATES: And when the judges decide about what's just and what's c
unjust, what are they doing? Answer me.

FRIEND: I can't.

SOCRATES: Say "they're speaking."

FRIEND: Yes.

SOCRATES: Then is it by speaking that they decide between us, whenever the judges decide about what's just and what's unjust?

FRIEND: Yes.

SOCRATES: And it was by measuring that the measurers decided about what's small and what's large, since it was with a measuring-stick that these things were decided.

FRIEND: That's right.

SOCRATES: Again, it was by weighing that the weighers decided about what's heavy and what's light, since it was with a scale that these things were decided.

FRIEND: It was.

SOCRATES: Again, it was by counting that the counters decided about d
many and few, since it was by number that these things were decided.

FRIEND: That's right.

SOCRATES: Yes, and, as we agreed a moment ago, it's by speaking that the judges decide between us about what's just and what's unjust, since it was with speech that these things were decided.

FRIEND: Well said, Socrates.

SOCRATES: Yes, because it was truly said: speech, as it seems, decides what's just and what's unjust.

FRIEND: It certainly seems so.

SOCRATES: What could the just and the unjust possibly be? Suppose someone asked us: "Since a measuring-stick, skill in measuring, and a measurer decide what's larger and what's smaller, what are "larger" and "smaller"?" We might tell him that "larger" is what exceeds and "smaller" is what's exceeded. Or: "Since a scale, skill in weighing, and a weigher e
decide what's heavy and what's light, what are "heavy" and "light"?" We

might tell him that "heavy" is what sinks down in the balance, and "light" is what rises up. In this way, then, if someone should ask us: "Since speech, skill in judging, and a judge decide what's just and what's unjust for us, what could "just" and "unjust" possibly be?" How can we answer him? Are we still unable to tell him?

FRIEND: We're unable.

SOCRATES: Do you think people do unjustice willingly or unwillingly?
374 What I mean is this: Do you think that people act unjustly and are unjust willingly or unwillingly?

FRIEND: Willingly, I'd say, Socrates, for they're wicked.

SOCRATES: Then do you think that people are wicked and unjust willingly?

FRIEND: Definitely. Don't you?

SOCRATES: No, at least not if we're to trust the poet.

FRIEND: What poet?

SOCRATES: The one who said: "No one is willingly wicked, nor unwillingly blessed."[1]

FRIEND: But, you know, Socrates, the old saying holds true, that singers tell many lies.

b SOCRATES: But I'd be surprised if this singer lied about this. If you have the time, let's consider whether he tells the truth, or lies.

FRIEND: Well, I do have the time.

SOCRATES: Then which do you think is just, lying or telling the truth?

FRIEND: Telling the truth, obviously.

SOCRATES: Lying, then, is unjust?

FRIEND: Yes.

SOCRATES: And which do you think is just, deceiving or not deceiving?

FRIEND: Not deceiving, certainly.

SOCRATES: Deceiving, then, is unjust?

FRIEND: Yes.

SOCRATES: Well, then, which is just, harming or helping?

FRIEND: Helping.

SOCRATES: Harming, then, is unjust?

FRIEND: Yes.

c SOCRATES: So, telling the truth, not deceiving, and helping are just, but lying, harming, and deceiving are unjust.

FRIEND: Yes, by Zeus, definitely.

SOCRATES: Even in the case of enemies?

FRIEND: Certainly not!

SOCRATES: Then is harming enemies just, and helping them unjust?

FRIEND: Yes.

SOCRATES: And isn't harming enemies just, even if you deceive them?

FRIEND: It must be.

1. Epicharmus of Syracuse, an early comic poet (frg. 7).

SOCRATES: What about lying to deceive and harm them? Isn't this just?
FRIEND: Yes. d
SOCRATES: Well, then, you say that helping friends is just, don't you?
FRIEND: Definitely.
SOCRATES: By not deceiving them, or by deceiving them, if it's for their benefit?
FRIEND: Even deceiving them, by Zeus.
SOCRATES: But, while it's just to help people by deceiving them, certainly it's not just to help them by lying? What if we help them by lying?
FRIEND: It would be just even if we lied.
SOCRATES: Then, as it seems, both lying and telling the truth are just and unjust.
FRIEND: Yes.
SOCRATES: And not deceiving and deceiving are just and unjust.
FRIEND: I guess so.
SOCRATES: Both harming and helping are just and unjust.
FRIEND: Yes.
SOCRATES: So all these sorts of things, it appears, are both just and unjust. e
FRIEND: So it seems to me.
SOCRATES: Listen, then. I have a right and a left eye, don't I, just like other people?
FRIEND: Yes.
SOCRATES: A right and a left nostril?
FRIEND: Definitely.
SOCRATES: And a right and a left hand?
FRIEND: Yes.
SOCRATES: Although you call these by the same name, you say some are right and some are left. If I ask you which is which, wouldn't you be able to say that these on this side are right and these on the other are left?
FRIEND: Yes.
SOCRATES: Then let's get back to our point. Although you call those acts by the same name, you say that some are just and some are unjust. Can 375
you say which are just and which are unjust?
FRIEND: Well, I suppose that each of these acts turns out to be just if and when we should do them, but unjust if we shouldn't.
SOCRATES: Good for you! Then does the person who does each of these acts, when he should, do what's just, while the person who does them, when he shouldn't, does what's unjust?
FRIEND: Yes.
SOCRATES: And isn't he himself just, the one who does what's just, but the one who does what's unjust is himself unjust?
FRIEND: That's right.
SOCRATES: Now, who can perform surgery and cauterize and reduce swelling, if and when he should?
FRIEND: A doctor.

375b SOCRATES: Because he knows how, or for some other reason?
FRIEND: Because he knows how.
SOCRATES: And who can cultivate and plow and plant when he should?
FRIEND: A farmer.
SOCRATES: Because he knows how, or because he doesn't?
FRIEND: Because he knows how.
SOCRATES: Isn't this true for the other cases as well? The one who knows how can do what he should, if and when he should, but the one who doesn't know how can't?
FRIEND: So it is.
SOCRATES: And what about lying and deceiving and giving help? Can the one who knows how do each of these acts when he should and at the right time, but the one who doesn't know how can't?
c FRIEND: That's true.
SOCRATES: But the person who does them when he should is just?
FRIEND: Yes.
SOCRATES: And he does them because of his knowledge.
FRIEND: How else?
SOCRATES: Then a just person is just because of his knowledge.
FRIEND: Yes.
SOCRATES: Isn't the unjust person unjust for the opposite reason?
FRIEND: So it seems.
SOCRATES: And the just person is just because of his wisdom.
FRIEND: Yes.
SOCRATES: The unjust person is unjust, then, because of his ignorance.
FRIEND: I guess so.
SOCRATES: So it looks like justice is what our ancestors handed down to us as wisdom, and injustice is what they handed down to us as ignorance.
d FRIEND: I guess so.
SOCRATES: Are people ignorant willingly or unwillingly?
FRIEND: Unwillingly.
SOCRATES: So they're also unjust unwillingly?
FRIEND: It seems so.
SOCRATES: Are unjust people wicked?
FRIEND: Yes.
SOCRATES: So they're wicked and unjust unwillingly?
FRIEND: Absolutely.
SOCRATES: And they act unjustly because they're unjust?
FRIEND: Yes.
SOCRATES: So, unwillingly?
FRIEND: Of course.
SOCRATES: Clearly what's done willingly doesn't happen unwillingly.
FRIEND: It couldn't.
SOCRATES: And acting unjustly comes about because there is injustice.
FRIEND: Yes.
SOCRATES: And injustice is unwilled.

FRIEND: Unwilled, yes.
SOCRATES: Then they act unjustly and are unjust and wicked unwillingly.
FRIEND: Unwillingly, it seems.
SOCRATES: Then in that case the singer didn't lie.
FRIEND: I guess not.

ON VIRTUE

How can a man become virtuous? If virtue can be taught, there must be teachers of it; yet there don't seem to be any—even the famous virtuous men of Athens failed to teach virtue to their own sons, let alone to anyone else. Nor is virtue a natural gift, for if it were there would be trainers dedicated to recognizing and fostering it, as with horse trainers and athletics coaches. The remaining alternative is that those who enjoy it have the gods to thank, not their nature, nor their educators.

Whole passages from Plato's Meno *reappear, more or less unchanged, in this dry little dialogue: 377b–378c ≈* Meno *93d–94e. This apparent plagiarism offends the sensibilities of modern scholars, but surely the author had no wish to conceal the borrowings from* Meno*; on the contrary, his use of themes and passages from* Meno *and other well-known Platonic dialogues is a way of citing them and drawing support from authoritative sources for his thesis. That thesis was not common ground in Plato's Academy; Plato's own position was far more nuanced than our author's, and Xenocrates, a student of Plato and the third head of the Academy, wrote a work (now lost) affirming that* Virtue Can Be Transmitted*, perhaps in response to the question asked by Socrates in* Meno*, whether virtue can be taught. If the dialogue was part of a debate internal to the Old Academy, then it can be dated to the latter half of the fourth century* B.C.*, when Aristotle as well as Xenocrates addressed the question. Or else the dialogue may have been directed against the Stoics, who claimed that virtue can be taught and that its foundation lies in human nature; if so, it might date from the middle of the third century* B.C.*, a time when Arcesilaus, as head of the Academy, was placing new emphasis on Plato's written works and drawing skeptical and anti-Stoical lessons from them.*

The view espoused at the end of On Virtue*, that virtue comes about by divine allotment, not only echoes Socrates' comments at the end of Plato's* Meno*; it is of a piece with Plato's view that philosophers should rule and that their rule might come about by divine allotment (*Letter *VII 326a–b,* Republic *473c–d). Theological support for this view of god is given by Plato at* Laws *715e–716d. Aristotle also uses some of the imagery and expressions found at the end of* On Virtue *(*Eudemian Ethics *1246b37–1247a13 and 1248b3–7,* Nicomachean Ethics *1145a20–29,* Politics *1284a3–11).*

Most manuscripts of On Virtue *list as speakers 'Socrates, Friend', but two say 'Socrates, Meno', and one says 'Socrates, Hippotrophus [Horse-trainer]'; that Socrates is a speaker is clear from the dialogue itself, but the other three appellations are evidently guesses by later scholars. So it seems to have been*

transmitted during antiquity without any indication of who the speakers were. The same is true of the dialogue labeled On Justice*; these two dialogues also lack titles of a normal Platonic sort and may be among those said in ancient lists of Platonic works to be 'without a heading'. In this translation, we have decided to call the unknown interlocutor 'Friend'.*

D.S.H.

SOCRATES: Can virtue be taught? If not, do men become good by nature, 376
or in some other way?

FRIEND: I can't give you an answer right now, Socrates. b

SOCRATES: Well now, let's consider it. Tell me, if someone wanted to become good with the virtue that makes expert chefs good, how would he do it?

FRIEND: By learning from good chefs, obviously.

SOCRATES: Good. Now if he wanted to become a good doctor, to whom would he go to become a good doctor?

FRIEND: That's obvious—to one of the good doctors.

SOCRATES: And if he wanted to become good with the virtue that makes c
expert builders good?

FRIEND: To one of the builders.

SOCRATES: And if he had wanted to become good with the virtue that makes men wise and good, where must he go to learn it?

FRIEND: This virtue, too, if it *can* be learned, I suppose he'd have to learn from good men. Where else?

SOCRATES: Then tell me, who were the good men of our city? Let's consider if these are the ones who make men good.

FRIEND: Thucydides, Themistocles, Aristides, and Pericles. d

SOCRATES: Can we name a teacher for each of them?

FRIEND: No, we can't; I haven't heard of any.

SOCRATES: Well then, can we name a student, either a foreigner or a citizen, or anybody else, either free or slave, who is reputed to have become wise and good by associating with these men?

FRIEND: I haven't heard of anybody.

SOCRATES: Might they not have been too jealous to share their virtue with other men?

FRIEND: Maybe.

SOCRATES: Just as chefs, doctors and builders are jealous—that way they won't have any rivals. For it isn't profitable for them to have many rivals or to live among many similar professionals. Is it similarly unprofitable for good men to live among men like themselves?

FRIEND: Probably.

Translated by Mark Reuter.

SOCRATES: But aren't they just, as well as good?

FRIEND: Yes.

SOCRATES: Does it profit someone to live not among good, but among bad men?

FRIEND: I can't tell you.

SOCRATES: Well, can you tell me this—whether it's the business of good men to harm, and of bad men to help or *vice versa*?

FRIEND: *Vice versa*.

377 SOCRATES: The good, therefore, help, and the evil harm?

FRIEND: Yes.

SOCRATES: Is there anyone who wants to be harmed rather than be helped?

FRIEND: Of course not.

SOCRATES: Therefore, no one wants to live among bad rather than good men.

FRIEND: That's right.

SOCRATES: Therefore, no good man will be too jealous to make another man good and similar to himself.

FRIEND: Apparently not, according to that argument.

SOCRATES: Have you heard that Cleophantus was the son of Themistocles?

FRIEND: I've heard that.

SOCRATES: Isn't it obvious that Themistocles would not have begrudged his son becoming the best—Themistocles, a man who wouldn't have begrudged that to anyone, if he really was good, which he was, as we admit.

b FRIEND: Yes.

SOCRATES: Did you realize that Themistocles taught his son to be an expert horseman—he could ride standing upright on his horse, he could throw a javelin from this position, and he could perform many other remarkable feats—his father taught him and made him an expert in many other things that require good teachers. Haven't you heard that from the older generation?

FRIEND: I have.

c SOCRATES: So no one could criticize his son's natural ability as bad.

FRIEND: Not rightly, at least from what you say.

SOCRATES: What about this? Have you ever heard anyone—young or old—say that Cleophantus, the son of Themistocles, was a wise and good man in the way that his father was wise?

FRIEND: Never.

SOCRATES: Are we to suppose, then, that he wanted to teach his son those things, but he didn't want to make him better than any of his neighbors in the wisdom that he himself enjoyed, if virtue can indeed be taught?

d FRIEND: That isn't very likely.

SOCRATES: And yet he was just the sort of teacher of virtue that you suggested. But let's consider another man, Aristides, who raised Lysimachus. He gave his son the best Athenian education in matters which require teachers, but he made him no better than anyone else. Both you and I know this, for we've spent time with him.

FRIEND: Yes.

SOCRATES: And you know that Pericles, too, raised his sons Paralus and Xanthippus—in fact, I think you were in love with one of them. As you e
know, he taught them horsemanship—and they were as good as any Athenian—the liberal arts, and athletic games; he brought them up to be as good as anyone at every skill for which there are teachers; and yet he didn't want to make them good men?

FRIEND: But perhaps they would have been, Socrates, if they hadn't died young.

SOCRATES: You're coming to the aid of your boyfriend, which is fair enough. But if virtue were teachable and if it were possible to make men good, Pericles would certainly have made his sons expert in his own virtue rather than in the liberal arts or athletic games. But it doesn't seem to 378
be teachable, since Thucydides, as well, raised two sons, Melesias and Stephanus, and you cannot say about them what you said about the sons of Pericles, for you know very well that one lived to a ripe old age, and the other much longer. Indeed, their father taught them well, especially to be the finest wrestlers in Athens. He sent one to Xanthias and the other to Eudorus—weren't they supposed to be the finest wrestlers of the day?

FRIEND: Yes.

SOCRATES: So it's clear that he would never have taught his sons what b
he had to spend money on, when he could have made them good without spending anything—wouldn't he have taught them to be good, if it could be taught?

FRIEND: That seems likely.

SOCRATES: But perhaps Thucydides was a commoner, and he didn't have many friends among the Athenians and their allies? No, but he was from a great household, and he was able to do great things here in Athens and in other Greek cities. So, if virtue could be taught, he would have found c
someone—either locally or abroad—who could have made his sons good, if he himself didn't have the time because of his political affairs. No, my friend, it looks as if virtue can't be taught.

FRIEND: No, probably not.

SOCRATES: Well then, if virtue isn't teachable, are men naturally good? If we examine this in the following way, perhaps we might find out. Now then, do we think that good horses have particular natures?

FRIEND: They do.

SOCRATES: And aren't there some men who have a skill by which they d
know the natures of the good horses, those physically fit for racing and mentally spirited or else lethargic?

FRIEND: Yes.

SOCRATES: What, then, is this skill? What name does it have?

FRIEND: Horsemanship.

SOCRATES: And likewise for hunting dogs, is there some skill by which men can discern the good and bad natures of the dogs?

FRIEND: There is.

SOCRATES: What is it?

FRIEND: Huntsmanship.

SOCRATES: And what about gold and silver? Do we think there are money-changers who separate the good coins from the bad by looking at them?

e FRIEND: There are.

SOCRATES: What do you call them?

FRIEND: Assayers.

SOCRATES: And again athletic coaches know by looking which traits of the human body are good or bad for each of the events, and in older or younger boys which are going to be their most valuable traits, where they have high hopes for them to succeed in what their bodies can perform well.

FRIEND: That's true.

SOCRATES: Which of these is more important for cities: good horses, good

379 dogs, and so on, or good men?

FRIEND: Good men.

SOCRATES: Well? Don't you think, if men had innate characters good for virtue, that people would make every effort to recognize them?

FRIEND: Very likely.

SOCRATES: Now can you tell me which skill is dedicated to, and capable of judging, the natural qualities of good men?

FRIEND: No, I can't.

SOCRATES: And yet it would surely be worth a great deal, as would those

b who possess it, for they could show us which of the young, while still boys, are going to be good. We would take them and guard them in the acropolis at public expense, like silver, only more carefully, so that no harm would come to them, from battle or any other danger. They would be stored up for the city as guards and benefactors when they came of age.

But really, I dare say that it's neither by nature nor by teaching that men become virtuous.

c FRIEND: How then do you suppose, Socrates, that they become virtuous, if it's neither by nature nor teaching? How else could they become good?

SOCRATES: I don't think it's very easy to explain this. My guess, however, is that the possession of virtue is very much a divine gift and that men become good just as the divine prophets and oracle-mongers do. For they become what they are neither by nature nor skill: it's through the inspiration of the gods that they become what they are. Likewise, good men announce

d to their cities the likely outcome of events and what is going to happen, by the inspiration of god, much better and much more clearly than the fortune-tellers. Even the women, I think, say that this sort of man is divine, and the Spartans, whenever they applaud someone in high style, say that he is divine. And often Homer uses this same compliment, as do other poets. Indeed, whenever a god wishes a city to become successful, he places good men in it, and whenever a city is slated to fail, the god takes the good men away from that city. So it seems that virtue is neither teachable nor natural, but comes by divine allotment to those who possess it.

DEMODOCUS

What has come down to us under the title Demodocus *seems to be a combination of two separate works: a monologue (addressed to Demodocus) which argues against collective decision-making (part I), and a trilogy of dialogues which raise doubts about three elements of common sense (parts II–IV). The trilogy may have been among the Platonic works said in antiquity to be 'without a heading', together with* On Justice *and* On Virtue. *At some point a scribe seems to have attached the trilogy to the end of* Demodocus I *by accident, which caused all subsequent copies to have the expanded format.*

In Demodocus I, *Socrates refuses Demodocus' request to give advice on a matter soon to be discussed in a public meeting. He argues instead that the whole collective decision procedure (offering advice, listening to advice, and deciding the question by voting) is absurd. Both the content (which overlaps with that of* Sisyphus*) and the style of argument (which proceeds largely by dilemma) are Platonic enough, though the monologue form is unusual. The addressee, Demodocus, also appears in* Theages, *where he agrees with Socrates that advice is something sacred. The piece is probably later than mid-fourth century* B.C., *perhaps much later.*

In Demodocus II–IV, *the narrator (we are probably meant to assume that he is Socrates) reports three conversations, between unnamed third parties, which call into question certain principles of common sense; he is left in doubt about these principles, a doubt which the reader is expected to share. The common-sense principles are plausible, but arguments in the other direction are developed in order to balance their plausibility and leave the reader with an open mind. This is a technique practiced by adherents of the Academy under the sceptical philosopher Arcesilaus and after, which suggests that the dialogues are from the middle of the third century* B.C., *or later.*

D.S.H.

I

You invite me,[1] Demodocus, to give you advice on the matters you are 380
meeting to discuss; but I am inclined rather to ask what is the point of your assembly and of the readiness of those who think to give you advice and of the vote which each of you intends to cast.

Translated by Jonathan Barnes.

1. The speaker is not named, but is apparently intended to be taken as Socrates.

Suppose, on the one hand, that it is impossible to give good and informed advice on the matters you are meeting to discuss: then surely it is ridiculous
b to meet to discuss matters on which it is impossible to give good advice. Suppose, on the other hand, that it *is* possible to give good and informed advice on such matters: then surely it would be absurd if there were no knowledge on the basis of which it is possible to give good and informed advice on these matters—and if there *is* some knowledge on the basis of which it is possible to give good advice about such matters, then there must be some people who in fact know how to give good advice on such matters; and if there *are* some people who know how to give advice on
c the matters you are meeting to discuss, then necessarily in your own case either you know how to give advice on these matters, or you do not know how to do so, or else some of you know and others do not know. Now if you all know, why do you still need to meet to discuss the question? Each one of you is competent to give advice. If none of you know, then how can you discuss the question? And what will you gain from this assembly
d if you *cannot* discuss the question? If some of you know and others do not know, and if the latter need advice, then—supposing that it is possible for a man of sense to give advice to those who are uninformed—surely *one* man is enough to give advice to those of you who lack knowledge?[2] For presumably those who know how to give advice all give the same advice, so that you ought to hear one man and then be done with it. But this is not what you are actually doing: rather, you want to hear several advisers. You are assuming that those who are undertaking to give you advice do not know about the matters on which they are giving advice; for if you assumed that your advisers did know, then you would be
381 satisfied when you had heard just one of them. Now it is surely absurd to meet to hear people who do not know about these matters, with the thought that you will thereby gain something.

This, then, is what perplexes me about your assembly. As for the readiness of those who think to give you advice, there is the following perplexity.

Suppose that, although they are giving advice on the same matters, they do not give the same advice: then how can all of them be giving sound advice if they are not giving the advice given by someone who gives good
b advice? And is it not absurd for people to be ready to give advice on matters about which they are uninformed? For if they are informed they will not choose to give advice which is not good. But if they give the same advice, why need they all give advice? It will be enough for one of them to give this advice.[3] Now surely it is absurd to be ready to do something which will gain nothing. Thus the readiness of those who are uninformed
c cannot fail to be absurd, given what it is; while men of sense will not be ready in such a case, knowing as they do that any one of their number

2. Accepting two emendations in d4: adding *ouk* before *epistamenois;* changing *humin* to *humōn.*

3. Emending *ta auta* to *tauta* in b5.

will have the same effect if he gives advice as he ought to. Hence I am at a loss to discover how[4] the readiness of those who think to give you advice can be anything but ridiculous.

I am particularly perplexed to grasp the point of the votes which you intend to cast. Are you judging men who know how to give advice?—No more than one of them will give advice, nor will they give different advice on the same matters. Hence you will not need to cast any votes about them. Or[5] are you judging men who are uninformed and do not give the d
advice they should?—You ought not to allow such people, any more than madmen, to give advice. But if you are going to judge neither the informed nor the uninformed, then who *are* you judging?

In any case, why need other men give you advice at all if you are competent to judge such matters? And if you are not competent, what is the point of your votes? Surely it is ridiculous for you to meet to take advice, e
which implies that you need advice and are *not* yourselves competent, and then, having met, to think that you ought to vote, which implies that you *are* competent to judge. For it can hardly be the case that as individuals you are ignorant and yet having met you become wise; or that in private you are perplexed and yet having come to the same place you are no longer perplexed but become competent to see what you ought to do—all this without learning from anyone or finding things out for yourselves. This is the most extraordinary thing of all: given that you cannot see what 382
ought to be done, you will not be competent to judge anyone who gives you good advice on these matters. Nor will this adviser of yours, being just one man, say that he will teach you to see[6] what you ought to do and also to judge those who give you bad or good advice, given that he has so little time and you are so numerous—this would plainly be no less extraordinary than the previous supposition. But if neither the meeting nor your adviser makes you competent to judge, what is the use of your votes?

Surely your meeting is inconsistent with your voting and your voting b
with the readiness of your advisers? For your meeting implies that you are not competent but need advisers, while the casting of votes implies that you do not need advisers but *are* capable of judging and of giving advice. And the readiness of your advisers implies that they have knowledge, while your casting votes implies that the advisers do not have knowledge.

Moreover, suppose that, after you had voted and after he had given c
you advice on whatever you were voting about, someone were to ask whether you knew if the goal for the sake of which you intended to put into action what you had voted on would come about: I do not think that you would say that you did know. Again, if the goal for the sake of which

4. Replacing the question mark after *sumbouleuein* in c4 with a comma.
5. Accepting the emendations of *alla* to *ē* in d1, and *ē* to *alla* in d2.
6. Adding *kai sunoran* after *didaxein* in a3.

you intend to act were to come about, do you know that it would be in your interest? I do not think that either you or your adviser would say that you do. And if someone were to ask you further whether[7] you thought that any man knew anything of these matters, I do not think you would admit that you did.

d Now when the sort of matters about which you are giving advice are unclear to you, and when the voters and the advisers are uninformed, it stands to reason, as you yourselves will agree, that men often lose confidence and change their minds about whatever they took advice on and voted about. But such a thing ought not to happen to good men. For they know what the matters on which they are giving advice are like, and that those whom they have persuaded will surely attain[8] the goal for the sake of which they give advice, and that neither they nor those whom they e have persuaded will ever change their minds.

Thus I thought that it was proper[9] for a sensible man to give advice on topics of this sort and not on the matters on which you invite me to give advice. For advice on the former topics ends in success, nonsense on the latter in failure.

II

I witnessed a man upbraiding his companion because he believed the plaintiff when he had not heard the defendant but only the plaintiff. He said that he was doing something appalling: he was condemning the man 383 in advance[10] when he had neither witnessed the affair himself nor heard the man's friends who had witnessed it and whose words he might reasonably trust; and, without hearing both sides he had rashly trusted[11] the plaintiff. Justice required hearing the defendant, too, as well as the plaintiff, before giving praise or blame. How could anyone decide a case fairly or b judge men properly if he had not heard both parties? As with purple, or with gold coins, so with arguments it was good to judge by comparison. And why was time allotted to both parties, or why did the jurors swear to hear both impartially, unless the lawgiver had thought that cases would be more justly and better judged by the jurors in this way?

"You seem to me not even to have heard the popular saying."

c "Which one?" he asked.

" 'O, never judge in a case until you have heard both the stories'.[12] This would hardly circulate so widely if it were not a right and proper saying.

7. Emending *de* to *d'ei* in c6, and replacing the question mark in c7 with a comma.

11. Emending *episteuse* to *pisteusas* in a3.
12. Hesiod, frg. 338 Merkelbach-West.

So I advise you," he said, "in the future not to blame or praise men so rashly."

His companion replied that it seemed quite clear to him that it would be absurd if it were impossible to tell whether one speaker was speaking truly or falsely and yet possible to tell whether two speakers were; or if d
it were impossible to learn from someone who spoke the truth and yet possible to be instructed in the same matters by the same man together with someone else who spoke falsely; or if one man who spoke correctly and truly could not make clear what he was saying and yet two men, one of whom spoke falsely and not correctly, could make clear what the man who spoke correctly could not make clear.

"I am perplexed," he said, "by the following point too: how will they ever make the matter clear? By being silent or by speaking? If they make it clear by being silent, then there will be no need to hear either, let alone both. If they both make it clear by speaking and yet certainly do not both e
speak together (each is required to speak in turn), how can they both make it clear at the same time? If they are both to make it clear at the same time, then they will speak at the same time—and this is not allowed. Hence if they make it clear by speaking, it can only be that each of them makes it clear by speaking, and that when each of them speaks, each of them then makes it clear. Hence one will speak first and the other second, and one will make it clear first and the other second. Yet if each in turn makes the same thing clear, why do you still need to hear the later speaker? The matter will already have been cleared up by the man who spoke first. 384
Moreover," he said, "if both make it clear, then surely each of them makes it clear. For if one of a pair does not make something clear, how could they both make it clear? But if each of them makes it clear, plainly the one who[13] speaks first will also make it clear first. So isn't it possible to tell how things stand after listening to him alone?"[14]

When I heard them I myself was perplexed and could not come to a judgment—though the others who were present said that the first man spoke the truth. So help me with the matter if you can:[15] when one man b
speaks can you assess what he says, or do you need his opponent too if you are to know whether he is telling the truth? Or is it unnecessary to hear both sides? What do you think?

III

The other day someone was criticizing a man because he had been unwilling to trust him and lend him money. The man who was being criticized was defending himself, and someone else who was present asked the critic c

13. Adding *hos* before *erei* in a4.

14. Replacing the period in a5 with a question mark.

15. Placing a comma after *echeis* in b1.

whether it was the man who did not trust him and lend him money who was in the wrong. "Or haven't *you* gone wrong," he said, "in not persuading him to lend to you?"

"Where did I go wrong?," he replied.

"Who seems to you to go wrong," he said, "—someone who fails to get what he wanted or someone who gets it?"

"Someone who fails," he replied.

"And you failed," he said, "since you wanted the loan, whereas he wanted not to give it and didn't fail in that."

"Yes," he replied, "but, granted that he didn't give me the money, *where* did I go wrong?"

"Well," he said, "if you asked him for what you ought not to have
d asked, then surely you realize that you were in the wrong, whereas he, who did not give it, was in the right. And if you asked him for what you ought to have asked, then surely in failing to get it you must have gone wrong."

"Perhaps," he replied. "But surely he was wrong in not trusting me?"

"Well," he said, "if you had dealt with him as you should, you would not have gone wrong at all, would you?"

"No indeed."

"In fact, then, you didn't deal with him as you should."

"Apparently not," he said.

"So if he wasn't persuaded because you didn't deal with him as you
e should, how can you justly criticize him?"

"I can't say."

"And can't you say either that one needn't be considerate to people who behave badly?"

"I can certainly say that," he replied.

"But don't those who don't treat people as they should seem to you to behave badly?"

"They do," he replied.

"Then what did he do wrong if he wasn't considerate to you when you behaved badly?"

"Nothing at all, it seems," he said.

"Then why on earth," he said, "do men criticize one another in this way, blaming people they have not persuaded for not having been persuaded but never criticizing themselves in the least for not having per-
385 suaded them?"

Someone else who was present said: "Suppose you've behaved well to someone and helped him, and then when you ask him to behave in the same way to you he refuses—surely in these circumstances you might reasonably blame him?"

"The man you are asking to behave in the same way," he said, "is either able or unable to behave fairly towards you, isn't he? If he's not able to, surely you're not making a fair request in asking him to do what he's not able to do; and if he *is* able to, how did you fail to persuade such a man?
b How can it be fair for people to say such things?"

"Damn it," he replied, "he ought to criticize such conduct in order that in future he'll behave better towards him—and his other friends, too, who have heard his criticisms."

"Do you think that people behave better," he asked, "if they hear someone speaking properly and making proper requests or if they hear someone going wrong?"

"Someone speaking properly," he replied.

"But you thought that he was not making a proper request?"

"True," he said.

"Then surely people won't behave better when they hear such criticisms?"

"No, they won't," he replied.

"Then what is the point of such reproaches?" c

He said that he could not find an answer.

IV

Someone was accusing a man of naïveté because he was quick to trust anyone who spoke to him.

"It's reasonable to trust your fellow citizens and your relations; but to trust men you've never seen or heard before, when you're well aware that most men are rogues and liars—that's no small sign of simplicity." d

One of those present said: "I thought that you would esteem someone who grasped things quickly, no matter what they were, rather than someone who did so slowly?"

"Indeed I do," the first man replied.

"Then why do you criticize him," he asked, "if he is quick to trust anyone who speaks the truth?"

"But I'm not criticizing him for that," he replied; "rather, it's because he's quick to trust people who don't tell the truth."

"But suppose he had taken longer to give his trust and hadn't trusted just anybody, and had then been deceived[16]—wouldn't you have criticized him all the more?"

"I would," he replied.

"Because he was slow to trust and didn't trust just anybody?" e

"Of course not," he replied.

"No," he said, "I'm sure you don't think it's right to criticize a man for that reason, but rather because he trusts people who say what's not trustworthy?"

"Yes indeed," he said.

"Do you think then," he said, "that it's *not* right to criticize him for being slow to trust people and for not trusting just anybody, but that it *is* right to criticize him for being quick to trust and for trusting just anybody?"

"No, I don't," he replied.

16. Accepting the emendation of *ēitiato* to *ēpatato* in d7.

"Then why are you criticizing him?" he asked.

"Because he's wrong to trust just anybody and to trust them quickly, before considering the question."

386 "But if he trusted them slowly before considering the question he wouldn't be wrong?"

"Of course he would," he replied "—in that case he'd be just as wrong. I think, rather, that he shouldn't trust just anybody."

"If you think that he shouldn't trust just anybody," he said, "then surely he shouldn't be quick to trust strangers? Rather, you think that he should first consider whether they're telling the truth?"

"I do," he replied.

"And if they're friends and relations, needn't he consider whether they're telling the truth?"

"I should say that he does need to," he replied.

"For perhaps even some of *these* people say what's not trustworthy?"

"Yes indeed," he replied.

b "Then why," he said, "is it reasonable to trust your friends and relations rather than just anybody?"

"I can't say," he replied.

"Again, if you should trust your relations[17] rather than just anybody, shouldn't you also think them more trustworthy[18] than just anybody?"

"Of course," he replied.

"Then if they're relations of some people and strangers to others, surely you'll have to think them more trustworthy than themselves?[19] For you shouldn't think that relations and strangers are equally trustworthy, or so you say."

"I can't accept that," he replied.

"Equally," he said, "some will trust[20] what they say and others will deem it untrustworthy, and neither party will be wrong."

"That too is absurd," he replied.

c "Again," he said, "if relations say the same thing as just anybody, surely what they say will be equally trustworthy or untrustworthy?"

"Necessarily so," he replied.

"Then shouldn't you give equal trust to anyone who says these things when he says them?"

"That's plausible," he replied.

While they argued in this way I was perplexed as to who on earth I should and shouldn't trust, and whether I should trust the trustworthy and people who know what they're talking about, or rather relations and acquaintances. What do you think about this?

17. Deleting *ou* in b2.

18. Accepting the emendation of *ouk apistous* to *ou kai pistous* in b3–4.

19. Accepting the emendation of *autōi* to *autōn* in b6.

20. Accepting the emendation of *pisteuousin* to *pisteusousin* in b10.

SISYPHUS

Are some people better than others at thinking about what course of action to follow? Sisyphus certainly assumes so. He stayed behind in Pharsalus a day longer than expected in order to meet with the governing authorities to help them in their deliberations. But Socrates is puzzled about what deliberation can really be, and he wonders how it differs from mere guesswork. By the end of the dialogue, it becomes clear that Sisyphus does not know the first thing about deliberating, and Socrates offers to delve into it again with him.

Sisyphus thinks that deliberating is trying to find out the best course of action. But Socrates argues that this cannot be right—if you are in a position to deliberate about something, you must already understand that subject, and if you understand it, you won't try to find it out; unlike inquiry, which presupposes ignorance, meaningful deliberation presupposes knowledge. Since the objects of deliberation are in the future and not yet in determinate existence, deliberation risks being a shot in the dark unless it is aimed at something definite. What target should it be aimed at? What kind of knowledge is presupposed? The dialogue does not tell us, but surely its author (probably a follower of Plato writing in mid-fourth-century B.C.*) means to encourage his readers toward Platonic philosophy and its central target—Goodness itself. At roughly the same time, in his* Protrepticus, *or* Exhortation to Philosophy *(a work surviving only in fragments), Aristotle was also arguing that political judgment needs a foundation in speculative philosophy (B46–51).*

Aristotle investigated the concept of deliberation in his lectures on ethics, where several passages indicate that this topic had been discussed in Plato's Academy, apparently in much the same terms as in Sisyphus. *Of Plato's own works, the most relevant are* Meno, *which raises the paradox that one cannot try to find out either what one knows or what one doesn't know (80d–e), and* Euthydemus, *which mentions two related paradoxes in the course of illustrating the difference between mere logic-chopping and real philosophy (275e–277c).*

We find in Sisyphus *certain notable anachronisms which place it firmly in the fourth century* B.C.*—not the fifth, when Socrates actually lived. Sisyphus of Pharsalus in Thessaly was a contemporary of Plato, not of Socrates, and played a prominent role in local affairs. Stratonicus of Athens, whom the author gratuitously mentions at the beginning of the dialogue, was a renowned performing musician and teacher of the first third of the fourth century, whom Socrates could scarcely have known. And when Socrates asks, "Where is Callistratus?" (388c), he seems to refer to Callistratus of Aphidna, a prominent Athenian*

politician who was on the run from a death sentence for several years after 362. So the author must have intended his dialogue to resonate with a contemporary mid-fourth-century audience. Plato's Meno *suggests by certain biographical details that it is directed against the rival educational philosophy offered by Isocrates in Athens, and the same may well be true of* Sisyphus. *Isocrates undertook to make his students good at deliberating, without taking what he regarded as the useless detour of Platonic philosophy, and held that "likely opinion about useful things is far better than exact knowledge of useless things" (*Helen *5). Isocrates also declared, "I regard a man as wise whose opinions enable him to hit upon the best course in most cases" (*Antidosis *271), a conception of wise deliberation that is called into question in* Sisyphus.

D.S.H.

387b SOCRATES: We waited a long time for you yesterday as well, Sisyphus, before Stratonicus' show, so that you could join us in hearing a real master giving a performance full of splendid material, both in theory and in practice; but after we gave up thinking you were coming, we went to hear the man by ourselves.

SISYPHUS: Yes, that's absolutely right—some business arose, you see, c which was fairly urgent, so I couldn't ignore it. Our authorities were in conference yesterday, so they required me to join their deliberations; and if the authorities summon any of us to join their deliberations, we citizens of Pharsalus are legally bound to comply.

SOCRATES: Well, it's a splendid thing to obey the law, and also to be considered a good deliberator by one's fellow citizens—as you yourself are considered to be one of the good deliberators in Pharsalus. Still, I'm not in a position to take issue with you about good deliberation, Sisyphus, d at the moment; that, I think, would call for a lot of leisure and a long argument—but I'd like to propose a discussion with you about deliberation itself, first of all, about what it is.

What could deliberation itself be? Could you tell me that?—not how to do it well or badly or splendidly, but just what sort of thing deliberation itself is? Surely you could do that quite easily, being such a good deliberator yourself? I hope I'm not being too inquisitive by questioning you on the subject.

SISYPHUS: Can it really be that you don't know what deliberation is?

e SOCRATES: Indeed I don't, Sisyphus, at least if it differs at all from what's done by a man who lacks understanding on some matter calling for action, guessing his answer by divining or making it up: he says whatever comes

Translated by David Gallop.

into his head, just like people who play odds-and-evens; they have no idea, of course, whether they're holding an even or an odd number of things in their hands, yet when they say which it is, they hit upon the truth. Perhaps deliberation is also something like that: someone who has 388
no understanding of what he's deliberating about is just lucky in what he says, and hits upon the truth. If it's something like that, then I do know roughly what deliberation is; but if it's not like that, then I don't understand it at all.

SISYPHUS: But surely, it's not like being utterly and completely ignorant of some matter, but like being familiar with part of it, while not yet understanding the rest.

SOCRATES: Perhaps you mean that deliberation is—Heaven help me! I b
feel as if I'm almost divining your view about good deliberation—do you mean it's something like this? Someone is trying to find out what would be the best course of action to take, and doesn't yet clearly understand it, but is rather in the process of thought, as it were? Is that more or less what you mean?

SISYPHUS: Yes, it is.

SOCRATES: Which do people try to find out—matters which they know, or ones which they don't know?

SISYPHUS: Both.

SOCRATES: When you say that people try to find out both—things they do know as well as things they don't—perhaps you mean something like c
this: one might, for example, be acquainted with Callistratus—know who he was—yet not know where he was to be found.[1] Is that what you mean by trying to find out both?

SISYPHUS: Yes, it is.

SOCRATES: Now you wouldn't try to find out the former, knowing Callistratus, at least if you knew him?

SISYPHUS: Of course not.

SOCRATES: But you might try to find out where he was. d

SISYPHUS: Yes, I think you might.

SOCRATES: Nor, again, would you try to discover where the man was to be found, if you knew that; in that case, you would go and find him right away, wouldn't you?

SISYPHUS: Yes.

SOCRATES: Apparently, then, it isn't things which people know that they try to find out, but things they don't know.

But that argument may strike you as captious, Sisyphus, put forward not with a view to the truth of the matter, but merely as a debating point. If so, look at it this way, and see if you agree with what was just said. e
You know, don't you, what happens in geometry: the diagonal is unknown to geometers, yet there's no question whether it is or is not a diagonal—that's not what they're trying to find out at all—but rather, how long it

1. Accepting the deletion of *ouch hostis eiē ho Kallistratos* in c6.

is in relation to the sides of the areas it bisects. Isn't *that* what they're trying to find out about the diagonal?

SISYPHUS: I believe so.

SOCRATES: And that *is* something unknown, isn't it?

SISYPHUS: Absolutely.

SOCRATES: Or again, take the doubling of the cube. You know, don't you, that geometers try to find out, by reasoning, how big it is? As for the cube itself, they don't try to find out whether it's a cube or not. That much they know, don't they?

SISYPHUS: Yes.

389 SOCRATES: Or again, consider the upper air. You surely know that what Anaxagoras and Empedocles and all the rest of the cosmologists are trying to find out is whether it's infinite or finite.

SISYPHUS: Yes.

SOCRATES: But they don't ask whether it is air, do they now?

SISYPHUS: Of course not.

SOCRATES: In all such cases, then, our conclusion is as follows: nobody can ever try to find out anything that he knows, only what he doesn't know. Would you agree with me about that?

SISYPHUS: I would.

b SOCRATES: Now isn't this what deliberation seemed to us to be—somebody trying to find out the best course to follow in matters requiring him to take action?

SISYPHUS: Yes.

SOCRATES: And we thought that deliberation was trying to find out something concerning practical matters, didn't we?

SISYPHUS: Yes, of course.

SOCRATES: So now it's time for us to consider what it is that prevents people from finding out what they're trying to find out.

SISYPHUS: I think it is.

c SOCRATES: And what should we say it is that prevents them, if not incomprehension?

SISYPHUS: Let's look into it, for Heaven's sake.

SOCRATES: Absolutely!—we must let out every reef, as they say, and raise full cry.

So now let's examine the following question together: do you think it's possible for a man to deliberate about music if he has no knowledge of music, and knows neither how to play the cithara nor how to perform any other kind of music?

SISYPHUS: No, I don't.

d SOCRATES: And what about military or nautical expertise? Would someone who knew neither of those subjects be able to deliberate at all about what he should do in either field? Would he be able to deliberate about how to command a force or captain a vessel if he lacked all knowledge of military or nautical matters?

SISYPHUS: No.

SOCRATES: And would you expect the same to hold in all other fields? It is quite impossible for someone who doesn't understand something either to know or to deliberate about what he doesn't understand.

SISYPHUS: I agree.

SOCRATES: But it *is* possible to try to find out what one doesn't know; isn't that right?

SISYPHUS: Certainly. e

SOCRATES: Then trying to find out can no longer be identified with deliberating.

SISYPHUS: Why not?

SOCRATES: Because what one tries to find out is evidently something one doesn't know, whereas apparently no human being can deliberate about what he doesn't know. Wasn't that what we just said?

SISYPHUS: It certainly was.

SOCRATES: And isn't that what you Pharsalians were doing yesterday, trying to find out the best things for your city to do, yet not knowing them? Because if you knew them, you surely wouldn't still have been trying to find them out—just as we don't try to find out anything else we already know, do we?

SISYPHUS: No, we don't.

SOCRATES: And if one doesn't know something, Sisyphus, which do you think one should do: try to find it out or learn it?

SISYPHUS: Learn it, for Heaven's sake; that's what *I* think. 390

SOCRATES: And there you're right. But tell me, is it for the following reason that you think one should learn it rather than try to find it out? One can discover it more quickly and easily by learning it from those who understand it, than by trying to find it out on one's own, when one doesn't know it. Or is there some other reason?

SISYPHUS: No, that is the reason.

SOCRATES: Well then, why did you people take the trouble to deliberate yesterday on matters you don't understand, and try to find out the best course of action for the city to take? Why weren't you learning those things, rather, from someone who understands them, so that you could take the b best course of action for the city? Instead, it seems to me that you spent the whole day yesterday sitting there, making things up and divining about matters you didn't understand, instead of taking the trouble to learn them—I mean those who govern your city, including you.

Perhaps you'll say that I've been jesting at your expense merely for the sake of having a discussion, but that you think nothing has been seriously c proved. Yet you'll certainly have to take this next point seriously, Sisyphus. Suppose it be granted that there is such a thing as deliberation; suppose it does not, as was discovered just now, prove identical with sheer incomprehension,[2] guesswork, or making things up, no different, but just using a grander name for it. In that case, don't you think there's a difference

2. Accepting the conjecture *anepistēmosunē* in c4.

between some people and others with respect to deliberating well or being good deliberators, just as some people differ from others in all other areas of expertise—as, for example, some carpenters differ from others, or some
d doctors from others, or some pipers from others, or as tradesmen in general differ from one another?[3] Just as those experts differ in their respective skills, don't you think the same applies to deliberating—that there's a difference between some people and others?

SISYPHUS: Yes, I do.

SOCRATES: Now tell me, don't all those who deliberate either well or badly deliberate about things that are going to exist in the future?

SISYPHUS: Certainly.

SOCRATES: And what's in the future doesn't exist yet. Isn't that right?

SISYPHUS: Of course.

e SOCRATES: Because otherwise, presumably, it wouldn't *still* be going to exist in the future, but would exist already, wouldn't it?

SISYPHUS: Yes.

SOCRATES: And if it doesn't exist yet, it hasn't yet[4] come into being either.

SISYPHUS: No, it hasn't.

SOCRATES: But if it hasn't even yet come into being, then it doesn't yet possess any nature of its own either, does it?

SISYPHUS: None at all.

SOCRATES: Then those who deliberate well and those who do it badly are all deliberating about matters that neither exist nor have come into being nor possess any nature, whenever they deliberate about what's in the future. Isn't that right?

SISYPHUS: It does appear to be.

SOCRATES: Now do you think it's possible for anyone to hit upon the nonexistent either well or badly?

SISYPHUS: What do you mean by that?

SOCRATES: I'll show you what I'm suggesting. Consider a number of
391 archers. How would you distinguish which of them was a good marksman and which was a poor one? That's not hard to tell, is it? You would presumably ask them to aim at some target.

SISYPHUS: Certainly.

SOCRATES: And the one who most often succeeded in hitting the target you would judge the winner?

SISYPHUS: I would.

SOCRATES: But if there were no target set up for them to aim at, and each
b just shot wherever he pleased, how could you distinguish between the good marksman and the poor one?

SISYPHUS: I couldn't.

3. Placing a question-mark after *diapherousin* in 390d2, and a comma after *technais* in d3.

4. Conjecturing *oupō* for *houtōs* in e2.

SOCRATES: And wouldn't you also be at a loss to distinguish good deliberators from bad ones, if they didn't understand what they were deliberating about?

SISYPHUS: I would.

SOCRATES: And if those who deliberate are deliberating about matters in the future, they're deliberating about matters that don't exist, aren't they?

SISYPHUS: Absolutely.

SOCRATES: And it's impossible, isn't it, for anyone to hit upon the nonexistent. How do you think anyone could ever hit upon what doesn't exist? c

SISYPHUS: It can't be done.

SOCRATES: And since it's impossible to hit upon the nonexistent, no one who's deliberating about the nonexistent could actually hit upon it. For the future is something that doesn't exist, isn't it?

SISYPHUS: So I believe.

SOCRATES: Then since nobody can hit upon what's in the future, no human being can actually be good or bad at deliberation.

SISYPHUS: Apparently not.

SOCRATES: Nor can one person be either a better or a worse deliberator than another, if one cannot, in fact, be more or less successful at hitting upon the nonexistent.

SISYPHUS: Indeed not. d

SOCRATES: So what standard could people possibly have in mind when they call certain people good or bad deliberators? Don't you think, Sisyphus, that it would be worth delving into this again some time?

HALCYON

Socrates tells his devoted friend Chaerephon the legend of Halcyon, who was transformed by some heavenly power into a sea bird, the better to search for her much-beloved husband, who had drowned at sea. Chaerephon doubts the truth of the legend, but Socrates argues that his doubt is unfounded; we are ignorant of the limits of divine power, which is unimaginably greater than human power and has shown itself to be capable of tremendous things.

The topic and the setting of this lyrical little dialogue appear to be derived from a passage in Plato's Phaedrus *where Socrates also interprets a legend about the transformation of human beings into animals (258e–259d). The association between cosmos, heaven, nature, and divine power is characteristic of Platonism in later times, as is the skeptical stress on the limits of human knowledge, and the affinity between human beings and other animals. The dialogue is elaborately cultivated, both in vocabulary and composition, and is a good example of the artificial style called 'Asiatic' by later critics. It was probably composed between 150* B.C. *and 50* A.D.

The ending of Halcyon *contains a sly allusion to the story of the two wives of Socrates, Xanthippe and Myrto, both of whom, he hopes, will be as devoted to him as Halcyon was to her husband. This story of the bigamy of Socrates goes back to the fourth century* B.C. *at least.*

Although many manuscripts attribute Halcyon *to Plato and an ancient book list records it as being among the works incorrectly ascribed to him, it has virtually disappeared from the Platonic corpus. This is because it was later attributed to Lucian, the second-century* A.D. *orator and dialogue writer, probably by Byzantine scholars who noticed similarities with the methods and themes of Lucian. When the corpus of Platonic works was established for modern times in the sixteenth-century edition of Henri Étienne (Stephanus),* Halcyon *was not printed, and it has normally not been printed in other modern editions of Plato. It is nowadays usually printed only in editions of the Lucianic corpus.*

D.S.H.

CHAEREPHON: Socrates, what was that voice that reached us from way down along the beach, under the headland? It was so sweet to my ears! What creature can it be that makes that sound? Surely creatures that live in the sea are silent. 1

SOCRATES: It's a sort of sea bird, Chaerephon, called the halcyon, much given to lamenting and weeping. There is an ancient account about this bird, which was handed down as a myth by men of old. They say that it was once a woman, the daughter of Aeolus the son of Hellen, who ached with love and lamented the death of her wedded husband, Ceyx of Trachis, the son of Eosphorus the Dawn Star—a handsome son of a handsome father. And then, through some act of divine will, she grew wings like a bird and now flies about the sea searching for him, since she could not find him when she wandered all over the face of the earth.

CHAEREPHON: Is it Halcyon that you're referring to? I had never heard the voice before; it really did strike me as something exotic. Anyway, the creature certainly does produce a mournful sound. About how big is it, Socrates? 2

SOCRATES: Not very large. Yet great is the honor she has been given by the gods because of her love for her husband. For it's when the halcyons are nesting that the cosmos brings us what are called the 'halcyon days' in mid-winter, days distinguished for their fair weather—today is an especially good example. Don't you see how bright the sky above is and how the whole sea is calm and tranquil, like a mirror, so to speak?

CHAEREPHON: You're right; today does seem to be a halcyon day, and yesterday was much like it. But by the gods, Socrates! How can we actually believe those ancient tales, that once upon a time birds turned into women or women into birds? All that sort of thing seems utterly impossible.

SOCRATES: Ah, my dear Chaerephon, we seem to be utterly short-sighted judges of what is possible or impossible—we make our assessment according to the best of our human ability, which is unknowing, unreliable, and blind. Many things which are feasible seem, to us, not feasible, and many things which are attainable seem unattainable—often because of our inexperience, and often because of the childish folly in our minds. For in fact all human beings, even very old men, really do seem to be as foolish as children, since the span of our lives is small indeed, no longer than childhood when compared with all eternity. My good friend, how could people who know nothing about the powers of the gods and divinities, or of nature as a whole, possibly tell whether something like this is possible or impossible? 3

Did you notice, Chaerephon, how big a storm we had the day before yesterday? Someone pondering those lightning flashes and thunderbolts and the tremendous force of the winds might well be struck by fear; one might have thought the whole inhabited world was actually going to collapse. But a little later there was an astounding restoration of fair weather 4

Translated by Brad Inwood. Text: M. D. MacLeod, *Luciani Opera* (Oxford, 1987), vol. IV.

which has lasted right up to the present moment. Do you think, then, that it is a greater and more laborious task to conjure up this kind of fair weather out of such an overwhelming storm and disturbance and to bring the entire cosmos into a state of calm, than it is to reshape a woman's form and turn it into a bird's? Even our little children who know how to model such things out of clay or wax can easily work them into all kinds of shapes, all out of the same material. Since the divinity possesses great power, incomparably greater than ours, perhaps all such things are actually very easy for it. After all, how much greater than yourself would you say that the whole of heaven is?

5 CHAEREPHON: Socrates, who among men could imagine or find words for anything of the sort? Even to say it is beyond human attainment.

SOCRATES: When we compare people with each other, do we not see that there are vast differences in their abilities and inabilities? Adult men, when compared to mere infants who are five or ten days old, have an amazing superiority in their ability at virtually all the practical affairs of life, those carried out by means of our sophisticated skills as well as those carried out by means of the body and soul; these things cannot, as I said, even
6 cross the minds of young children. And how immeasurably superior is the physical strength of one man grown to full size, compared to them, for one man could easily vanquish thousands of such children; and it is surely natural that in the initial stages of life men should be utterly helpless and incapable of anything. When one person, as it seems, is so far superior to another, how are we to suppose that the powers of the whole heaven would appear, compared with our powers, to those who are capable of grasping such matters? Perhaps indeed many people will think it plausible that, just as the size of the cosmos surpasses the form of Socrates or Chaerephon, so its power and wisdom and intelligence will to the same degree surpass our condition.

7 For you and me and many others like us, many things are impossible which are quite easy for others to do. For as long as they lack the knowledge, it is more impossible that people who cannot play the flute should do so or that the illiterate should read or write, than it is to make women out of birds or birds out of women. Nature virtually tosses into a honeycomb an animal which is footless and wingless; then she gives it feet and wings, adorns it with all kinds of variegated and beautiful colors and so produces a bee, wise producer of heavenly honey; and from mute and lifeless eggs she shapes many species of winged, walking and water-dwelling animals,
8 using (as some say) the sacred arts of the vast aether. We are mortal and utterly trivial, unable to see clearly either great or small matters and in the dark about most of the things which happen to us; so we could not possibly make any reliable claim about the mighty powers of the immortals, whether as regards halcyons or as regards nightingales.[1]

1. Legend tells that Procne and Philomela were also turned into birds, one into a nightingale, the other into a swallow.

O bird of musical lamentations, I shall pass on to my children the far-famed myth about your songs just as I received it from my ancestors, and I shall sing frequently to my wives, Xanthippe and Myrto, of your piety and loving devotion to your husband, with special emphasis on the honor you received from the gods. Will you too do something like this, Chaerephon?

CHAEREPHON: That would certainly be appropriate, Socrates, and what you say is a double exhortation to the bond between husbands and wives.

SOCRATES: Well, now it's time to bid farewell to Halcyon, and go on to the city from Cape Phaleron.

CHAEREPHON: Certainly; let's do so.

ERYXIAS

Socrates falls into conversation with Erasistratus, and the talk turns to the topic of wealth and virtue. If the wealthiest person is whoever possesses what is of the greatest value, then those who possess the skill of practical wisdom must be the wealthiest, argues Socrates. Eryxias rejects this line of thinking, but when he asserts that it is good to be materially prosperous, he is defeated by Critias' argument that having money is not always a good thing. Socrates shows that Eryxias' common-sense ideas about money are confused; money has only conventional value and is no more useful, for providing ourselves with what our bodies need, than the skills which a teacher can communicate to others. In a subtle argument addressed to Critias, Socrates concludes that money cannot be considered useful at all, even when it is needed to obtain something of value. The final paradox: if money is useful, whoever has the most of it must be in the worst condition; if he wasn't in a very bad condition, he wouldn't need a lot of money and he wouldn't find it useful.

In between the arguments about wealth runs another theme, a discussion about the nature of philosophical argument: What is the difference between serious philosophical arguments and intellectual games? What is the difference between philosophical arguments and quarrels? Is it the argument or the speaker that carries credibility? Is philosophy a matter of personal commitment or a diverting performance?

Together these two themes constitute a meditation on the way of life embraced by Socrates and like-minded philosophers. Outwardly poor but inwardly rich, they support themselves by teaching others their wisdom, a wisdom that increases the value to them and their students of all that they come across and make use of in life. Their skill lies in their arguments, which they take seriously but not to the point of quarrelling, arguments to which they give credence and are personally committed.

Many of the ideas in Eryxias *are Socratic commonplaces, and some have parallels in Plato. Socrates prayed, "May I consider the wise man rich. As for gold, let me have as much as a moderate man could bear and carry with him"* (Phaedrus *279c). It is better to know how to use things than to possess them, he argues in advocating philosophy in* Euthydemus. *But the influence of Plato on the unknown author of* Eryxias *is probably strongest in the dialogue's literary composition, which is as subtle as many of Plato's own 'Socratic' dialogues. Scholars have noticed parallels to Stoic and sceptic ideas in* Eryxias *and have tried to draw chronological conclusions. But the only secure evidence is the gymnasiarch of 399a, holder of an office that took that form at some date*

between 337 and 318 B.C. *The dialogue must be of that date or later, and it may have been written in the Academy, which provided a fertile ground for the later development of Stoicism and scepticism.*

D.S.H.

I happened to be strolling about in the Stoa of Zeus the Liberator with 392
Eryxias, from the deme Stiria, when Critias and Erasistratus, the nephew of Phaeax (Erasistratus' son), came up to us. Erasistratus, it turned out, was just recently back from Sicily and other places nearby. When he came to me he said, "Greetings, Socrates." b

"The same to you," I replied. "Well now, anything worth reporting to us from Sicily?"

"Certainly. But would you care to sit down first? I walked from Megara yesterday and now I'm exhausted."

"By all means, if that's what you want."

"What would you like to hear first about the situation over there? What the Sicilians are up to, or what attitude they're taking towards our city? Personally, I think that in their feelings towards us they're like wasps. If you stir them up and get them angry just a little at a time they become c
unmanageable; you have to drive them out by attacking their nest. That's what the Syracusans are like. Unless we make it our business to go to their city with a very large force, there's no chance they will ever submit to us. Half-measures can only make them angrier, and then they'll be extremely hard to deal with. In fact they've just now sent envoys to us, and I think they intend to trick our city somehow."

While we were talking the Syracusan envoys happened to pass by. d
Erasistratus pointed to one of them and said, "That man over there, Socrates, is the wealthiest in all Sicily and Italy. He must be, since he has such an enormous amount of land at his disposal that he could easily farm a huge tract if he wanted to. This land of his is unlike any other, in Greece at any rate. And he also has plenty of the other things that make you wealthy—slaves, horses, gold, and silver."

When I saw that he was getting ready to babble on about the man's 393
possessions, I asked him, "But, Erasistratus, what sort of reputation does he have in Sicily?"

"People think that he's the wickedest of all the Sicilians and Italians, and he really is. He's even more wicked than he is wealthy, so if you wanted to ask any Sicilian who he thinks is the wickedest man, and who is the wealthiest, everyone will say the same thing: he is."

I thought that what Erasistratus was talking about was no small matter; on the contrary, it's what people consider to be of the very highest importance, namely virtue and wealth. So I asked him, "Who's wealthier, b

Translated by Mark Joyal.

a man who has one talent[1] of silver, or a man who has a field worth two talents?"

"The man with the field, I suppose."

"By the same argument, if someone had clothes or blankets or other things worth yet more than our Sicilian fellow's property, he would be wealthier." Erasistratus agreed. "And if someone were to give you a choice between these two, which would you want?"

c "I would choose the most valuable of them."

"Do you think that choice would make you wealthier?"

"I do."

"So as it stands we think that whoever possesses the most valuable things is the wealthiest person?"

"Yes."

"Then healthy people would be wealthier than sick people, since health is a more valuable possession than the sick man's property. Everyone, at

d any rate, would prefer to be healthy and possess little money than to be sick and possess the Great King's[2] fortune, since they obviously believe that health is more valuable. After all, nobody would ever choose in favor of health unless he thought it was preferable to wealth."

"Of course not."

"Again, if something else should seem more valuable than health, the one who possessed this would be the wealthiest person."

"Yes."

"And suppose someone were to come up to us now and ask, 'Can

e you tell me, Socrates, Eryxias, and Erasistratus, what the most valuable possession for a person is? Is it the thing whose possession would enable him to make the best decisions about how he could most effectively manage both his own affairs and those of his friends?' What would we say this thing is?"

"In my view, Socrates, prosperity is a person's most valuable possession."

"That's not a bad answer at all. But would we consider the most prosperous people in the world to be the most successful?"

"Yes, I believe so."

"And wouldn't the most successful people be the ones who make the fewest errors in handling their own affairs and those of others, while doing the most things right?"

"Exactly."

"So those who know what's bad and what's good, and what a person

394 should and shouldn't do, would have the greatest success and make the fewest errors?" Erasistratus accepted this too. "As it is, then, the same men are apparently the wisest, the most successful, the most prosperous, and the wealthiest, since it turns out that wisdom is the most valuable possession."

1. Accepting the emendation *talanton hen* in b2.
2. The king of Persia, proverbially wealthy.

"Yes."

Eryxias interrupted: "But Socrates, how could it be any advantage to this person if he were wiser than Nestor but didn't have the things he b
needed for day to day living—food, drink, clothing, and other things of that kind? What help could wisdom be? How could he be the wealthiest, since he might as well be a beggar if he has none of the basic necessities?"

I thought that Eryxias made a lot of sense, and answered, "But would this happen to the person who possessed wisdom but lacked these necessities? And if someone possessed the house of Poulytion, and it was full of c
gold and silver, would he need nothing?"

"Why yes! He might very well sell his possessions at once and obtain in exchange whatever he actually needed for his day to day existence, or even spend hard currency, in exchange for which he could acquire those items and then have a good supply of everything right away."

"True—provided that the other people actually wanted a house like Poulytion's more than our friend's wisdom. And yet if they were the sort d
of people who put greater stock in the man's wisdom and what it produces, the wise man would be able to sell it much more easily, if it was the case that he needed and wanted to sell it and its products. Do people actually feel such a powerful compulsion to have the use of a house, and does it make such a great difference in a person's life to live in a house like Poulytion's rather than in a small and humble dwelling, while the use of e
wisdom has little value, and it doesn't make much difference whether a person is wise or ignorant in things that really matter? Do people despise wisdom and refuse to pay for it, and are there many who need and want to purchase the cypress wood in Poulytion's house and marble from Mt. Pentelicon? At any rate, if a person were a navigator or a doctor skilled at his profession, or were able to have a successful practice in some other profession along those lines, he would be valued more highly than every one of the greatest material possessions. And what about the person who can offer good advice about how to achieve success, both for himself and for someone else—wouldn't he be able to sell this skill, if that's what he wanted to do?"

Eryxias broke in, looking annoyed as though someone had done some- 395
thing wrong to him: "If you had to tell the truth, Socrates, would you really claim that you're wealthier than Callias, the son of Hipponicus?[3] I'm sure you'd agree that you're no less intelligent in all the most important things, indeed wiser; but that hasn't made you any wealthier."

"Maybe, Eryxias, you think these arguments we're now discussing are just a game, since, as you suppose, they have no reality, like pieces in b
backgammon which you can move to gain an advantage over your opponents so that they have no move they can make to counter yours. Now maybe with regard to wealth, too, you think that the true situation is no

3. One of the wealthiest men in Athens, noted for his lavish spending on the sophists. See *Apology* 20a; the events of *Protagoras* take place in his house.

more one way than another, and that some arguments are of the same kind, no more true than false. If a person offered these arguments he could get the better of his opponents in claiming that the wisest are in our view
c also the wealthiest, even though what he was saying was false while his opponents were speaking the truth. Perhaps this isn't surprising; it's as if two men were talking about letters: one claims that the name 'Socrates' begins with an 'S,' the other that it begins with an 'A'; and the argument that the name begins with an 'A' proves stronger than the argument that it begins with an 'S'."

Eryxias cast a glance around at the people who were there, laughing and blushing as though he had not been present at the earliest discussions,
d and said: "Socrates, I thought that our arguments shouldn't be the kind that can't persuade any of the people here and provide some benefit to them. Who in his right mind could ever be persuaded that the wisest are the wealthiest? What we should be discussing, since we're talking about wealth, is under what conditions it's an admirable thing to be wealthy and under what conditions it's a disgraceful thing, and just what kind of thing wealth is, whether it's good or bad."

e "All right, I'll be careful from now on; and thank you for your good advice. But since you're introducing the problem, why don't you venture to tell us yourself whether you consider it good or bad to be wealthy?—especially since you don't think that our earlier arguments dealt with this subject."

"Well then, I think it's good to be wealthy."

He wanted to go on speaking, but Critias interrupted and said: "Tell me, Eryxias, *do* you consider it a good thing to be wealthy?"

"I certainly do. I'd be crazy if I didn't; and I'm sure the whole world would agree with me about this."

396 "But I also think I could convince everybody that for some people, being wealthy is a bad thing. Yet if it really were good, it wouldn't appear bad to some of us."

Then I said to them: "If the two of you couldn't agree over who is the greater authority on expert horsemanship, and I happened to know about horses, I'd try to put a stop to your quarrel. After all, I'd be ashamed if I were there and didn't do all I could to prevent your quarrelling; likewise
b if you couldn't agree about anything else at all and were likely to go away as enemies instead of friends unless you came to an understanding. But as it is your disagreement is over something which you're bound to deal with throughout your whole life, and it makes a big difference whether you should consider it useful or not. What's more, the Greeks don't think it's any ordinary thing; they hold it in the highest regard—at any rate,
c that's why the first thing that fathers advise their sons to consider, as soon as they think their sons have reached the age when they have their wits about them, is how they will become wealthy, since a man who has possessions is worth something, but one who doesn't is worthless. Now if this

is taken so seriously, and you see eye to eye on other things but differ over such an important matter—on top of that, not over whether wealth is black or white, or light or heavy, but whether it's good or bad—that you actually become the worst of enemies if you argue over what's good d
and what's bad, even though you're really the closest friends and relatives—well, as far as I can, I'm not going to ignore you while you're carrying on your argument. If I could explain the situation to you and put a stop to your dispute, I would. But in fact, since I can't do that, and since each of you thinks he can make the other agree with him, I'm ready to e
help you all I can to come to an agreement about wealth. So try to make us agree with you, Critias, as you had undertaken to do."

"As I intended, I'd like to ask Eryxias if he thinks there are just and unjust people."

"I most certainly do."

"Then do you think injustice is a good thing or a bad thing?"

"A bad thing."

"Do you think a man would be behaving unjustly or not if he were to pay money to commit adultery with his neighbor's wife, when in fact both the city and its laws forbid it?"

"To my mind he would be acting unjustly."

"So if the unjust man who wanted to do this were wealthy and able to spend money on it, he would commit the crime. But if he weren't wealthy 397
and didn't have the resources to spend, he simply wouldn't be able to carry out what he wanted; and then there'd be no crime at all. It follows that this man would be better off if he weren't wealthy, since he would have less chance of carrying out what he wanted when what he wanted was wrong.

"And here's something else: would you say that being sick is bad or good?"

"Bad."

"Now then, do you think that some people are weak-willed?"

"Yes." b

"Then if it were better for the weak-willed person's health to stay away from food, drink, and the other things that people regard as pleasurable, but he wasn't able to do this because of his weakness, would it be better for him if he didn't have the means to acquire them, rather than if he had a superabundance of what he needed? For in that case he wouldn't have the opportunity to go wrong, no matter how much he wanted to."

I was thinking that Critias had conducted this conversation so effectively that if it weren't for the embarrassment Eryxias was feeling in front of c
everyone there, he might very well have stood up and hit Critias. Eryxias thought that something important had been taken from him, since it had become apparent to him that his earlier opinions about wealth were wrong. I realized that he was feeling like this and was worried that it might lead to insults and antagonism, so I said: "Just a couple of days ago this very

argument was being used in the Lyceum by a wise man named Prodicus,
d from Ceos.[4] The people who were there thought he was talking such nonsense that he couldn't convince any of them that he was speaking the truth. As a matter of fact a very outspoken young man came up and sat beside Prodicus. He began to laugh and jeer at him and provoke him; he wanted Prodicus to explain what he was saying. What's more, his standing among the audience was much higher than Prodicus'."

Erasistratus said, "Would you like to give us a report of the conversation?"

e "By all means, provided I can remember it. I think it went something like this.

"The young man asked him in what respect he thought wealth was bad and in what respect good. Prodicus responded as you did just now: 'It's good for gentlemen, the people who know in what situations they should use their property; but it's bad for those who are wicked and ignorant. The situation is the same with everything else as well: the nature of the things people deal in inevitably reflects the people themselves. I think that Archilochus'[5] poem said it well: "Men's thoughts are like the things they encounter." '

398 " 'In that case,' the young man said, 'suppose someone were to make me skilled in the same thing that good men are skilled in. He's bound at the same time to make everything else good for me as well. Yet *that* wasn't the point of his efforts, since he was concentrating on the thing at which he has made me skilled rather than ignorant. It's as if someone now were to make me skilled in letters: he would necessarily make the other things that have to do with letters good for me; and likewise with music too. It's
b the same story when he makes me good: inevitably he's made the other things good for me too.'

"To these analogies Prodicus didn't offer his agreement, yet he went along with the young man's initial remark.

" 'Do you think,' the young man said, 'that doing good things is just like building a house, that it's the work of human hands? Or do things have to go on being the very same as they were at the outset, whether bad or good?'

"Prodicus, I think, was now suspicious about where their argument was
c headed. So to avoid being defeated by the young man in full view of everyone who was there—though he thought it made no difference if this happened while they were alone—he gave a very shrewd response, that doing good things is the work of human hands.

" 'Do you think,' the young man said, 'that excellence can be taught, or is it innate?'

4. A professional educator (sophist); see *Protagoras* 315d, 337a ff. The Lyceum was a public space just outside the walls of Athens.

5. Early seventh-century-B.C. composer of iambic and elegiac poems. The line quoted is in frg. 70 Edmonds (Loeb) *Elegy and Iambus,* vol. 2.

" 'I believe it can be taught,' Prodicus said.

" 'Do you think a person would be foolish if he supposed that by praying to the gods he could become skilled in letters or music or could gain some other expertise, which he could only possess by learning from another d person or by finding it out for himself?'

" 'Yes, I do.'

" 'So, Prodicus,' the young man said, 'whenever you pray to the gods for success and good things, you're praying on those occasions for nothing other than to become a gentleman, since it's the case that things are actually good for gentlemen, but bad for mediocre people. But if excellence really can be taught, it would appear that you're praying for nothing other than to be taught what you don't know.'

"I told Prodicus that I thought he was under a serious delusion if it e turned out that he was wrong in supposing that we receive from the gods what we pray for at the same time that we pray for it. 'Although you sometimes hurry to the Acropolis and pray to the gods and beg them to give you good things, you don't know that they can give you what you're begging for. It's the same as if you were to go to the doors of a schoolteacher and implore him to give you skill in letters without any effort on your part, so that after you had received it you too would immediately be able to do the work that a schoolteacher does.'

"While I was saying this Prodicus, annoyed that his prayers to the gods might appear useless, began to go after the young man in order to defend 399 himself; he meant to offer the same arguments that you did a moment ago. But then the supervisor of the gymnasium came up and told him to leave. He thought that Prodicus' discussions weren't suitable for young ears, and if they weren't suitable, they must be wicked.

"The reason I've recounted this is so that you may observe how people feel about philosophy. If Prodicus were here arguing as he was, you would all think he was so mad that he should even be expelled from the gymna- b sium, whereas just now you seem to have conducted your argument so extremely well, Critias, that you not only convinced everyone here but also made your opponent agree with you. It's clearly like the situation in lawcourts: if two people were to offer the same testimony—one with the reputation of a gentleman, the other of a wicked man—the jurors would remain unconvinced by the wicked man's testimony, but might possibly even do the opposite to what he wanted. But if the one who had the reputation of a gentleman were to say the same things, his words would c be judged to be absolutely true. Perhaps the attitude your listeners have taken towards you and Prodicus is like this. They thought that Prodicus was a sophist and a charlatan, but they think you are an important man who is involved in the affairs of our city.[6] They also believe that they should not concentrate on the argument itself but rather on the character of the people who are arguing."

6. Accepting the conjectural deletion of *kai* before *andra* in c4.

"Why, Socrates, *you* may not be serious about what you're saying, but in my opinion Critias is clearly on to something important."

d "Rest assured I'm absolutely serious. But since the two of you carried on your discussion so effectively, why not put the final touch on it as well?[7] I think there's something left for you to investigate, since there seemed to be agreement at least on the point that wealth is good for some and bad for others. All that's left now is to examine what wealth itself is; unless you first determine this you won't even be able to reach an agree-
e ment on whether it's bad or good. I'm ready to give you as much help as I can to complete your investigation, so it's up to the one who claims that wealth is good to explain his position to us."

"My own opinion about wealth is no different from everyone else's: wealth is the possession of a lot of property. And I'm sure that Critias here also has the same opinion about wealth."

"In that case, then, you would *still* be left to consider what property is in order to avoid the appearance a bit later of arguing about this all over
400 again. Let me illustrate this with the Carthaginians, who use the following kind of currency. In a small piece of leather something roughly the size of a stater[8] is tied up, but no one knows what this is except the people who did the tying. Then when this is sealed they put it into circulation, and the person who has the largest number of these is considered to have the most property and to be the wealthiest. Yet if any Greek had a tremendous amount of this currency, he wouldn't be any wealthier than if he had a lot of pebbles which he took from the hill. In Lacedaemon they
b put iron into circulation according to weight, and what's more, the useless kind.[9] The person who has a large weight of this kind of iron is considered wealthy, yet elsewhere such a possession is worthless. In Ethiopia they use engraved stones which a Lacedaemonian would find useless. And among the Scythian nomads anyone who possessed the house of Poulytion would be considered no wealthier than an owner of Mount Lycabettus would be considered by us.

c "So clearly, each of these things cannot be property since some of the people who possess them seem no wealthier because of it. Yet each of them really is property for some people, and these people are wealthy because of their possession of it; but for others neither is it property nor does it make them wealthier. Likewise the same things are not beautiful and ugly to everybody, but rather different things strike different people in different ways.

d "If, then, we should wish to investigate why it is that houses are not property in the eyes of the Scythians but they are to us, or why leather is property to the Carthaginians but not to us, or why iron is property to

7. Accepting the emendation *epetelesaton* in d2.

8. A coin; the Athenian stater was 17.5 grams of silver.

9. Accepting the conjectural deletion of *tou sidērou* in b1.

the Lacedaemonians but not to us, wouldn't our findings be precisely like that? Let me elaborate. Suppose someone in Athens had a thousand talents in weight of the stones found in the marketplace. Since we have no use for these stones, is there any reason why we should consider him any wealthier because he has them?"

"Apparently not."

"But suppose he had the same weight of lychnite,[10] would we say that he was in fact very wealthy?"

"Of course." e

"Is it because the one thing is useful to us while the other is useless?"

"Yes."

"And that's also why among the Scythians houses are not property, because the Scythians have no use for a house; nor would a Scythian prefer the finest house over a heavy leather coat, since the one thing is useful to him while the other isn't. Again, we don't think that the Carthaginian coinage is property, since we couldn't possibly obtain from it what we need, as we do with silver; therefore it would be useless to us."

"Fair enough."

"It follows that everything that turns out to be useful to us is property, while everything useless is not."

In response to this Eryxias said: "How can that be, Socrates? When we're 401
dealing with one another don't we engage in talking and looking[11] and many other things? Would we consider these property? They *do* seem useful. But even so we haven't gained an impression of what property is. Everyone has pretty well agreed that something must be useful if it's going to be property, but since not all useful things are property, what kinds of useful things *are?*"

"What[12] if we were to pursue the question again through a comparison with drugs, which were invented for ending illnesses? Would we have a b
better chance of finding what we're looking for, namely, what it is that we treat as property and for what purpose the possession of property was invented? Possibly that approach would make it clearer to us. Now it appears that everything which is property must also be useful, and that what we call property is a species of these useful things. Therefore what we still have to do is consider for what use property is useful to use. For instance, all things which we use for work are useful, of course, just as all c
things that have life are animals, but of these animals we call one species man. Now suppose someone were to ask us what would have to be done away with so that we wouldn't need medicine or medical instruments. Our response would be, if illnesses were removed from the body and didn't occur at all, or if they were removed as soon as they did occur.

10. Parian marble; or else a red precious stone.

11. Accepting the emendation *blepein* in a2.

12. Assigning these two paragraphs to Socrates instead of Eryxias.

Therefore it seems that medicine is the science which is useful for removing illnesses.

d "But if someone were then to ask us what would have to be removed so that we wouldn't need property, would we have an answer? If we don't, let's start over again along these lines: if a person could live without food and drink, and not go hungry or thirsty, what need would he have of these things, or of money or anything else to provide himself with them?"

"None, I suppose."

"It's the same with other things, too. If we had no need of the things that we presently require to take care of our bodies, heat and cold for e instance, and everything else too which the body lacks but requires, then what passes for property would be useless to us, since no one would have any need at all of the things for whose sake we want property. The result for us would be satisfaction, as far as the persistent desires and needs of the body are concerned. So if it's to care for the body's needs that the possession of property is useful, and if these needs were taken out of our way, we wouldn't have any need for property, and property might not even exist at all."

"It looks like it."

"Then the things which are useful for that business appear to us, I suppose, to be property."

Eryxias agreed with this, but he was becoming seriously confused by the argument.

402 "What about this way of looking at it? Would we say that the same thing can be sometimes useful, but sometimes useless, for one specific purpose?"

"No, I don't think so. Instead, if we were to have any need of the thing for that one purpose, then I do think it's useful, but if we don't, then it isn't."

"So if we were able to make a gold statue without using fire, we wouldn't have any need of fire for that purpose. And if we didn't have any need b of fire, it wouldn't be useful to us either. The same argument applies to other things as well."

"It seems so."

"And so it would appear that whatever isn't needed when something is being done is also not useful to us in that particular case."

"That's right."

"Then if it should turn out one day that we were able to put an end to the body's needs so that it no longer had any, and we could do this without silver, gold, and other things of that kind which we don't actually use for the body (in the way that we use food, drink, clothing, blankets and houses), then it would appear that silver, gold, and other such things c wouldn't even be useful to us for this particular purpose, provided that the body's needs can one day be removed without using them."

"You're right."

"Then it would appear that these things aren't property to us either if they aren't useful, though they would be things which enable us to obtain what is useful."

"Socrates, I could never be convinced that gold, silver, and other things like them are not property, as you say. I'm *certainly* convinced that the things which are useless to us are not property, and that property ranks among the most useful things besides.[13] But I'm not persuaded that these d
things are not actually useful to us for living, since we can obtain what we require by means of them."

"Come on then, what would we say to this? Are there any teachers of music, letters, or some other skill, who obtain what they require for themselves by receiving compensation in return for their teaching?"

"There are."

"So it's with this skill of theirs that these people can obtain what they e
require, by receiving something in return for that skill in the same way that we receive things in return for gold and silver."

"Yes."

"But if it's with this that they obtain what they use for living, then it would actually be useful in itself for living. We did say, didn't we, that property is useful because with it we're able to obtain what we require for the body?"

"Yes we did."

"So if these skills are classified as useful for this purpose, then it appears they are property, for the same reason that gold and silver are property. It's clear too that those who possess these skills are wealthier. Yet a little earlier[14] we were having a lot of trouble accepting the argument that these are the wealthiest people. Based on the agreement we've just reached, 403
however, it would have to follow that the more skillful are sometimes wealthier. For instance, if someone were to ask us whether we thought a horse is useful to everybody, wouldn't you answer that it's useful to those who know how to use a horse, but not to those who don't?"

"I would."

"And by the same argument medicine also isn't useful to everybody, but only to the person who knows how to use it?"

"Yes."

"Is it the same with everything else too?"

"Apparently." b

"Then gold, silver, and the other things generally regarded as property would be useful only to the one who knows how they should be used?"

"Right."

"Now weren't we under the impression earlier[15] that it took a gentleman to know when and how to use each of these things?"

"We were."

13. Accepting the emendations *toutois* for *touto* and *ta chrēmata* for *chrēmata ta chrēsima* in d1.

14. 394a–395d.

15. 397e.

"Then these things would be useful only to gentlemen, since they're the ones who know how they should be used. But if these are useful only to them, then to them alone, it seems, would these things be property. It
c appears, moreover, that if someone were to take a person who knew nothing about riding a horse and who owned horses which were useless to him, and then made him knowledgeable about horses, he would have made him at the same time wealthier too, since he has taken what was previously useless to this man and made it useful. For by giving the man some knowledge he's instantly made him wealthy."

"It seems so."

"And yet I'm sure I could also swear on Critias' behalf that he's not convinced by any of these arguments."

d "I'm certainly not. In fact I'd be crazy if I were. But go on and finish your argument that the things generally accepted as money—silver, gold, and other such things—are not property. You can't imagine how much I admire these arguments of yours as I'm listening to you relate them right now."

"I think, Critias, that you enjoy listening to me in the same way that you enjoy listening to the rhapsodes who sing Homer's poems: you don't think a word of it is true. But come on, what would we say to this? Would
e you say that some things are useful for housebuilders when they are constructing a house?"

"Yes, I think so."

"Would we say that those things are useful which they use[16] for this construction—stones, bricks, boards, and that kind of thing? Or are these things also useful, the tools they used to build the house and with which they provided themselves with the boards and the stones, and likewise the tools for *these* tools?"

"I suppose that all the things involved in the operation are useful."

"Isn't this the case with all other activities? Not only are these things themselves useful which we use for each of our tasks, but also those by which we acquire these things and without which our work couldn't be done?"

"Exactly."

"Then likewise the things with which these last things were made, and
404 anything that came before them, and, again, the things with which these were made, and once more the things that preceded them, on and on endlessly—do all these things inevitably appear useful for the production of our work?"

"Yes, that might well be the case."

"Now what if a person possessed food, drink, clothing, and whatever else he's likely to use for his body, would he have any additional need for gold, silver, or anything else with which to acquire them, seeing that he already possesses them?"

16. Accepting the emendation *katachrōinto* in e4.

"I doubt it."

"Do you suppose a situation could occur when a man would need none b
of these things for the use of his body?"

"No, I don't."

"Now if these things were to appear useless for this purpose, wouldn't it follow that they can never appear useful? After all it was a basis of our discussion that things could not be sometimes useful, but sometimes useless, for one specific purpose."

"Well, in that respect, at least, our arguments may be in agreement: if these things should ever be useful for this purpose, they would never turn out also to be useless. As it is, for doing certain things . . . c

. . . some for doing wicked things, others for doing good things?"[17]

"Yes, I would say so."

"Can something wicked be useful for the purpose of doing something good?"

"No, I don't think so."

"Would we say that those acts are good which a person performs virtuously?"

"Yes."

"Can a person learn anything which is taught orally, if he's completely deprived of his ability to hear somebody else?"[18]

"No, by Zeus, I don't think so."

"So it would appear that hearing is to be classified as useful for virtue, d
since virtue can be taught through the sense of hearing and we make use of this sense for learning."

"Yes."

"Since medicine can put an end to a person's illness, it seems that sometimes medicine also may be classified as useful for virtue, if a person can acquire the sense of hearing through medicine."

"That may be so."

"And again, if we were to obtain medicine in exchange for property, property would obviously be useful for virtue too." e

"Yes, that's quite true."

"Likewise also the means by which we obtain the property?"

"Absolutely."

"Do you suppose that a person could obtain money by wicked and disgraceful means, and in return get hold of the medical knowledge by which he would be able to hear after having been unable to hear, and that he could make use of that same ability for excellence or for other things of a similar kind?"

"I certainly think so."

17. Some words seem to have been lost in the transmission of the text. Possibly Critias claims that for doing certain things, certain items are always useful: then Socrates asks if some items can be useful for doing wicked things, others for doing good things.

18. Accepting the conjectural deletion of $\bar{\epsilon}$ (and the comma before it) in c8.

"Surely nothing wicked could be useful for virtue."

"No, it couldn't."

"Then those things by which we obtain what is useful for one purpose or another are not necessarily also useful for that same purpose. Otherwise
405 bad things would sometimes appear to be useful for a good purpose. Perhaps this will make it clearer. If things are useful for one purpose or another, and this purpose couldn't come into existence unless those things existed beforehand, tell me, what would you say about that? Can ignorance be useful for knowledge, or sickness for health, or wickedness for virtue?"

"I don't think so."

"Yet on this we would agree, that knowledge can't belong to a person if ignorance didn't exist in him beforehand, that health can't belong to him if sickness didn't exist in him beforehand, and that excellence can't belong to him if wickedness didn't exist in him beforehand."

b "Yes, I suppose we would."

"Then it would appear that those things which are required for the creation of something else are not necessarily also useful for that thing. Otherwise it would seem that ignorance is useful for knowledge, sickness for health, and wickedness for virtue."

Critias was finding it very hard to go along with these arguments, that not everything we had mentioned could be property. When I realized that it would be—as the saying goes—as easy to persuade him as it is to boil
c a stone, I said: "Let's forget about those arguments, since we can't agree whether or not useful things and property are the same. But what would we say about this? Would we consider a person to be more prosperous and better if his physical requirements and his requirements for day to day living were extremely numerous, or if they were as few and simple as possible? Maybe the best way to look at it would be to compare the
d person with himself by considering whether his condition is better when he is sick or when he is healthy."

"We certainly don't have to consider *that* for very long."

"No doubt it's because everybody easily recognizes that the healthy person's condition is superior to the sick person's. Now then, in what circumstance would we have a greater need for all kinds of things, when we're ill or when we're healthy?"

"When we're ill."

e "So it's when we're in the worst condition that we have the most powerful and most numerous desires and needs, as far as physical pleasures are concerned?"

"Yes."

"And just as a person is in the best condition when he himself has the fewest requirements of that kind, can the same reasoning apply to two people, where one's desires and needs are powerful and numerous, while the other's are few and gentle? For example, consider anybody at all who is a gambler, or a drunkard, or else a glutton—all such conditions amount to nothing but desires."

"Exactly."

"But all these desires are nothing but the need for something; and those who have the greatest needs are in a worse condition than those who have no needs at all or as few as possible." 406

"As far as I'm concerned, people like that are certainly in a very bad state; the more they need the worse off they are."

"And so do we think that things can't be useful for some purpose unless we need them for that purpose?"

"That's right."

"Then if we suppose that these things are useful for taking care of the body's needs, mustn't we also require them for this purpose?"

"I think so."

"So the person who possesses the largest number of useful things for this purpose would also appear to *require* the largest number of things for this purpose, since he's bound to require all the things that are useful."

"That's how it seems to me."

"According to this argument, at least, it appears that those who have a lot of property must also need many of the things required to take care of the body, since property was seen as useful for this purpose. So the wealthiest people would necessarily appear to us to be in the worst condition, since they are in need of the greatest number of these things."

AXIOCHUS

Axiochus has come close to dying and was shaken by the experience, despite being familiar with arguments that used to make him laugh at death and at those who feared it. Socrates is summoned to his bedside to administer his usual consolations, of which he has a wide selection. Eventually some of them have the desired effect, and Axiochus welcomes the prospect of death as the release of his divine soul to a better place. He collects his thoughts, and Socrates goes on his way.

This dialogue is an unconventional version of a very conventional genre—the consolation letter. Typical examples include Seneca's Consolation for Marcia *and* Consolation for Polybius *and Plutarch's* Consolation for His Wife. *The Plutarchean* Consolation for Apollonius *is a sort of treasury of consolation arguments, and there are echoes and reflections of the genre in Cicero's* Tusculan Disputations *I and III, as well as in many other ancient sources, indicating its continuous popularity from at least the third century* B.C. *to the end of the pagan world, before being adapted by Christian writers. Every philosophical school produced arguments of consolation, especially Stoicism, and many letters of consolation freely borrowed arguments from all possible sources, whether or not the ideas were mutually consistent.*

It should therefore come as no surprise to see Socrates urging on Axiochus a wide variety of mutually incompatible consolations, including rhetorical and Cynic commonplaces as well as Epicurean, Stoic, and Platonic arguments. Some authors of this genre seem to have been less concerned with whether the arguments were true than with whether they were reassuring: "there are also some authors of consolation letters who combine all these kinds of consolation—for one man is moved by one sort, another by another—like the way I threw them all together in my Consolation, *for my soul was in a fever and I tried everything to cure it" (Cicero,* Tusculan Disputations *III.76).*

The strategy of Axiochus *seems to be derived from Plato's* Apology, *where Socrates says that death is either a permanent loss of consciousness or a transition to somewhere else. The arguments which are effective for Axiochus are Stoic (370b–d) and Platonic (371a–372a); "whether above or below, Axiochus, you ought to be happy, if you have lived piously." But the Cynic harangues and commonplaces (366d–369b) seem to make little impression, and the Epicurean arguments (365d–e and 369b–370b) are quite over his head.*

What makes Axiochus *unconventional is that it is not a letter addressed to someone who has been bereaved, but a dialogue with somebody who is about to lose his own life, a situation in which the problematic emotion is not grief but*

fear. The author, probably a Platonist writing between 100 B.C. *and 50* A.D., *has borrowed characters from earlier Socratic writings to clothe the* consolatio *in the guise of a Socratic dialogue.*

D.S.H.

While I was on my way to the Cynosarges and getting near the Ilisus, 364
I heard the voice of someone shouting, "Socrates, Socrates!" When I turned around to find out where it was coming from, I saw Clinias the son of Axiochus, running toward the Callirhoe,[1] together with Damon the musician, and Charmides the son of Glaucon.[2] (Damon was Clinias' music teacher; Charmides and Clinias were companions, and in love with one another.) So I decided to turn off the main road to meet up with them b
and get together as quickly as possible. With tears in his eyes, Clinias said:

"Socrates, now's your chance to show off the wisdom they're always saying you have! My father has been unwell for a while,[3] and is near the end of his life; and he's miserable on his deathbed, even though he used to laugh at people who had a phobia about death, and tease them a little. c
So come and reassure him in your usual way, so that he may meet his fate without complaining, and so that I and the rest of the family can also perform the proper rituals."

"Well, Clinias, you won't find me refusing such a reasonable request, especially since what you ask involves religion. Let's go; if that's the situation, speed is essential."

"Just seeing you, Socrates, will revive him; in fact he's often before managed to rally from this condition."

After hurrying along the wall to the Itonian gates—he lived near the gates d
by the Amazon column—we found that Axiochus had already collected his 365
senses and was strong in body, though weak in spirit, very much in need of consolation, sobbing and groaning, again and again, as well as weeping and clapping his hands. I looked down at him and said:

"Axiochus, what's all this? Where's your former self-confidence, and your constant praise of manly virtues, and that unshakable courage of yours? You're like a feeble athlete who put on a brave show in training exercises and lost the actual contest! Consider who you are—a man of b
such an advanced age, who listens to reason, and, if nothing else, an Athenian!—don't you realize that life is a kind of sojourn in a foreign land (indeed, that's a commonplace, on everybody's lips), and that those who

Translated by Jackson P. Hershbell.

1. The Cynosarges was a gymnasium outside the Athenian city wall; the Ilisus was a river in whose stream bed was a spring called Callirhoe.

2. Axiochus was the uncle of the famous Alcibiades; Clinias and Charmides, both remarkably handsome young men, appear in *Euthydemus* and *Charmides*, respectively, as members of the Socratic circle.

3. Accepting the conjectural deletion of *aiphnidiou*.

have led a decent life should go to meet their fate cheerfully, almost singing a paean of praise? Being so faint-hearted and unwilling to be torn from life is childish and inappropriate for someone old enough to think for himself."

c "True enough, Socrates, I think you're right. And yet, somehow or other, now that I'm very close to that awful moment, all those powerful and impressive arguments mysteriously lose their strength and I can't take them seriously; and a certain fear remains which assails my mind in various forms: that I will lose this light of day and these good things, and will lie somewhere or other, unseen and forgotten, rotting, and turning into maggots and wild beasts."

"In your distraction, Axiochus, you're confusing sensibility with insensi-
d bility, without realizing it. What you say and do involves internal self-contradiction; you don't realize that you're simultaneously upset by your loss of sensations and pained by your decay and the loss of your pleasures—as if by dying you entered into another life, instead of lapsing into the utter insensibility that existed before your birth. Just as during the government of Draco or Cleisthenes there was nothing bad at all that concerned you (because you did not exist then for it to concern you), nor will anything
e bad happen to you after your death (because you will not exist later for it to concern you).

"Away, then, with all such nonsense! Keep this in mind: once the compound is dissolved and the soul has been settled in its proper place, the body which remains, being earthly and irrational, is not the human person. For each of us is a soul, an immortal living being locked up in a mortal
366 prison; and Nature has fashioned this tent for suffering—its pleasures are superficial, fleeting, and mixed with many pains; but its pains are undiluted, long-lasting, and without any share of pleasure. And while the soul is forced to share with the sense organs their diseases and inflammations and the other internal ills of the body (since it is distributed among its pores), it longs for its native heavenly aether, nay, thirsts after it, striving
b upwards in hopes of feasting and dancing there. Thus being released from life is a transition from something bad to something good."

"Well, Socrates, if you think that living is bad, why do you remain alive? Especially since you puzzle your brain about these things and you're much cleverer than most of us."

"Axiochus, you don't give a true account of me; you think, like most Athenians, that just because I'm an inquirer I'm also an expert on something. I wish I knew these ordinary things, so far am I from knowing the
c extraordinary ones! My remarks are but echoes of the wise Prodicus,[4] some purchased for half a drachma, others for two, and still others for four. (That fellow teaches nobody for free and is always repeating the saying of Epicharmus:[5] "One hand washes the other"—give something and take

4. Prodicus of Ceos was a philosopher and teacher; see *Protagoras* 315d, 337a ff.

5. A fifth-century-B.C. comic poet.

something.) Anyway, just recently he gave a performance at the house of Callias son of Hipponicus,[6] in which he denounced living, so much so that I came within a hair's-breadth of writing it off; and since then, Axiochus, my soul has wanted to die."

"What did he have to say?"

"I'll tell you what I remember: What part of a lifetime is without its d
portion of misery? Doesn't the baby begin his life in pain, and cry from the first moment of birth? Certainly he lacks no occasion for suffering; hunger and thirst and cold and heat and hard knocks distress him, and he can't yet say what the problem is; crying is his only way of expressing discomfort. When he reaches the age of seven, after having endured much physical pain, he is set upon by tyrannical tutors, teachers, and trainers; e
and as he grows older there are scholars, mathematicians and military instructors, all a great crowd of despots. When he is enrollled among the Ephebes there is the Commander, and fear of beatings; then comes the 367
Lyceum and the Academy and the gymnasium-masters with their canings and excessive punishments; and his entire youth[7] is spent under Supervisors of Young Men and the Committee for Young Men of the Council of the Areopagus.[8]

"After he's free of all that, worries immediately steal upon him, and considerations about his career in life present themselves to him. And the earlier troubles seem like child's play, the bogey-men of babies, so to speak, compared with the later ones: military campaigns, wounds, and constant battles.

"Then old age creeps upon you unawares, into which flows everything b
in nature that is mortal and life-threatening. And unless you repay your life quickly, like a debt, nature stands by like a money-lender, taking security, sight from one man, hearing from another, and often both. And if you survive that, you'll be paralyzed, mutilated, crippled. Some people are physically in their prime in great old age—and their old minds enter a second childhood.

"And that is why[9] the gods, who understand the human condition, give c
a quick release from life to those[10] they hold in highest regard. For example, Agamedes and Trophonius, who built the temple of the Pythian god, after praying for the best thing that might happen to them, fell asleep and never woke up. And there were also the sons of the Argive priestess,[11] for whom

6. Callias was a wealthy Athenian noted for his patronage of philosophers (*Apology* 20a); the events in Plato's *Protagoras* and Xenophon's *Symposium* take place in his house.

11. Omitting *Hēras* in c5.

their mother likewise prayed for some reward from Hera for their piety, since when the team of mules was late they yoked themselves to the cart and took her to the temple; that night after their mother's prayer they passed away.

d "It would take too long to go through the works of the poets, who prophesy with inspired voices the events of life while deploring life itself. I shall quote only one of them, the most important one, who said,

> *Such is the way the gods spun life for unfortunate mortals,*
> *that we live in unhappiness,*

and,

> *Since among all creatures that breathe on earth and crawl on it*
> *there is not anywhere a thing more dismal than man is.*

e "And what does he say about Amphiaraus?

368 > *Whom Zeus of the aegis loved in his heart, as did Apollo,*
> *with every favor, but he never came to the doorsill of old age.*[12]

"And he who bids us,[13] 'Sing a dirge for the newly born; he faces so much misery'—what do you think of that? But I'll stop now, so as not to break my promise and lengthen my speech by mentioning other examples.

"What pursuit or trade has anyone ever chosen without criticizing it b and chafing at its conditions? Shall we discuss the jobs of tradesmen and laborers, toiling from dawn to dusk, barely able to provide for their needs, deploring their lot and spoiling all their sleepless nights with lamentation and tears? Well, shall we talk about the job of the merchant, who sails through so many perils and is, as Bias has shown, neither among the dead nor the living: terrestrial man throws himself into the sea as if he were c amphibious, and is entirely at the mercy of chance. Well, is farming a pleasant occupation? Really! Isn't it just one big blister, as they say, which always finds an excuse for pain? Now it's drought, now it's too much rain, now it's blight, now it's too much heat or frost, that makes the farmer weep.

"Well, how about highly respected politics? (I'm skipping over many cases.) How many dreadful things is it dragged through, feverishly quivering and throbbing, sometimes with joy, sometimes with painful failure, d worse than a thousand deaths? How could anyone be happy living for the masses, when he is whistled for and lashed, like the electorate's pet

12. *Iliad* xxiv.525–26 and xvii.446–47 and *Odyssey* xv.245–46, respectively (translations by R. Lattimore).

13. Euripides, in his lost play *Cresphontes* (frg. 452 Dindorf).

horse, driven from office, jeered, fined, and killed?[14] Well then, Mr. Politician Axiochus, how did Miltiades die? How did Themistocles die? How did Ephialtes die?[15] How did the ten commanders recently die, when I refused to refer the question to the people?[16] I didn't think it was proper for me to preside over a mad mob, yet on the next day the party of Theramenes and Callixenus suborned the presiding officers of the meeting and secured a condemnation against the men without a trial. Indeed, you 369
and Euryptolemus were the only ones to defend them, of the thirty thousand citizens in the Assembly."

"That's quite right, Socrates, and since then I've had enough of the speaker's platform, and I think that nothing is more irksome than politics. That's clear to everyone involved. You speak, of course, as a distant observer, but those of us who go through the experience know it perfectly well. The electorate, my dear Socrates, is an ungrateful, fickle, cruel, malicious, and boorish thing: a club, so to speak, of violent fools, drawn from the rabble in the street. And he who associates himself with it is even b
more contemptible by far."

"Well, Axiochus, since you regard the most reputable calling of all as more to be rejected than all the others, what are we to think of life's other pursuits? Shall we not escape from them?

"Once I also heard Prodicus say that death concerns neither the living nor those who have passed away."

"What do you mean, Socrates?"

"As far as the living are concerned, death does not exist; and the dead do not exist. Therefore death is of no concern to you now, for you are not dead, nor, if something should happen to you, will it concern you, for you c
will not exist. To be upset for Axiochus, about what neither does nor will concern Axiochus, is pointless distress, just as if you were to be upset about Scylla, or the Centaur, which, as far as you're concerned, neither exist now, nor will exist later, after your death. What is fearful exists for those who exist; how could it exist for those who don't?"

"You've taken those clever ideas from the nonsense that everybody's d
talking nowadays, like all this tomfoolery dreamed up for youngsters. But it distresses me to be deprived of the goods of life, even if you marshal arguments more persuasive than those, Socrates. My mind doesn't understand them and is distracted by the fancy talk; they go in one ear and out the other; they make for a splendid parade of words, but they miss the mark. My suffering is not relieved by ingenuity; it's satisfied only by what e
can come down to my level."

"That's because, Axiochus, you're confusing the perception of fresh evils with the deprivation of goods, without realizing it, forgetting that you

14. Omitting *eleoumenon* in d4.

15. Three fifth-century-B.C. leaders under the Athenian democracy.

16. The naval commanders at Arginusae were illegally prosecuted en masse; cf. Xenophon, *Memoirs of Socrates* I.1.18, and Plato, *Apology* 32a–c.

370 will have died. What distresses someone who is deprived of good things is having them replaced by bad things, and someone who doesn't exist cannot even conceive of the deprivation. How could anyone feel distress whose condition provides no awareness of anything distressing? If you hadn't started out, Axiochus, by ignorantly supposing, somehow or other, that the dead also have some sensation, you could never have been alarmed by death. But in fact you refute yourself; because you're afraid to be deprived of your soul, you invest this deprivation with a soul of its own; and you dread the absence of perception, but you think you will perceptually grasp this perception that is not to be.

b "As well as many other fine arguments for the immortality of the soul, a mortal nature would surely not have risen to such lofty accomplishments that it disdains the physical superiority of wild animals, traverses the seas, builds cities, establishes governments, and looks up at the heavens and sees the revolutions of the stars, the courses of sun and moon, their risings and settings, their eclipses and swift restorations, the twin equinoxes and c solstices, and Pleiades storms, summer winds, torrential downpours, and the violent course of tornadoes, and establishes for all eternity a calendar of the states of the universe, unless there really were some divine spirit in the soul which gives it comprehension and insight into such vast subjects.

"And so, Axiochus, you pass away, not into death, but into immortality, nor will you have good things taken from you, but a purer enjoyment of d them, nor pleasures mixed with the mortal body, but entirely undiluted by pains. For once you are released from this prison cell, you will set forth yonder, to a place free from all struggle, grief, and old age, a tranquil life untroubled by anything bad, resting in undisturbed peace, surveying Nature and practicing philosophy, not for a crowd of spectators, but in the bountiful midst of Truth."

e "Your argument has converted me to the opposite point of view. I no longer have any fear of death—I almost long for it, if I may imitate the orators and use a hyperbole. I have traveled[17] the upper regions for ages past and shall complete the eternal and divine circuit. I was being weak, but I've got a grip on myself and become a new man."

371 "Then perhaps you'd like another argument, which was related to me by Gobryas, a Persian sage: he said that his grandfather Gobryas (who, when Xerxes made his crossing, was sent to Delos to guard the island sanctuary where two deities were born) learned from some bronze tablets, which Opis and Hecaërge had brought from the Hyperboreans, that the soul, after its release from the body, goes to the Place Unseen, to a dwelling beneath the earth. Here the palace of Pluto is not inferior to the court of b Zeus, since the earth occupies the center of the universe and the vault of heaven is spherical, and half of this sphere fell to the celestial gods, and the other half to the gods under the earth, some of them brothers, others children of brothers. The gates on the way to Pluto's palace are protected

17. Accepting the emendation *meteōroporō* or *-polō* in e3.

by iron bolts and bars. When the gates swing open, the river Acheron, and then the river Cocytus, receives those who are to be ferried across to Minos and Rhadamanthus, in what is called the Plain of Truth. There sit c
judges who interrogate everyone who arrives about what kind of life he has lived and what sorts of activities he engaged in while he dwelled in his body. It is impossible to lie.

"Now those who were inspired by a good daemon during their lifetimes go to reside in a place for the pious, where the ungrudging seasons teem with fruits of every kind, where fountains of pure water flow, where all sorts of meadows bloom with many kinds of flowers, with philosophers discoursing, poets performing, dances in rings, musical concerts, delightful d
drinking-parties and self-furnished feasts, undiluted freedom from pain and a rich diet of pleasure; nor does fierce cold or heat ever occur, but through it wafts a temperate breeze, infused with the gentle rays of the sun.

"There is a certain place of honor for those who are initiated, and there they perform their sacred rites. Why should you not be the first in line for this privilege, you who are 'kin to the gods'? Legend tells us that e
Heracles and Dionysus, before their descents into the realm of Hades, were initiated in this world, and supplied by the Eleusinian goddess[18] with courage for their journeys yonder.

"But those who have wasted their lives in wickedness are led by the Erinyes to Erebus and Chaos through Tartarus, where there is a place for the impious, and the ceaseless water-fetching of the Danaids, the thirst of Tantalus, the entrails of Tityus eternally devoured and regenerated, and the never-resting stone of Sisyphus, whose end of toil is a new beginning. 372
Here, too, are people being licked clean by wild beasts, set on fire constantly by the Avengers, and, tortured with every kind of torture, consumed by everlasting punishment.

"That is what I heard from Gobryas, but you must decide for yourself, Axiochus. I am moved by argument, and I know only this for sure: every soul is immortal, and also, when removed from this place, free from pain. So whether above or below, Axiochus, you ought to be happy, if you have lived piously."

"I'm too embarrassed to say anything to you, Socrates. I'm so far from fearing death that now I actually passionately desire it. That's how much I've been affected by this argument, as well as by the one about the heavens. Now I despise life, since I'm moving to a better home.

"And now I'd like to go over what you've said, quietly and by myself. But after midday, Socrates, please visit me."

"I will do what you ask. And now I'll go back to my walk to the Cynosarges, where I was going when I was summoned here."

18. Demeter, whose cult at Eleusis was the most important of the Greek mystery cults; those initiated there were promised a happy survival in the underworld after death.

EPIGRAMS

Before Socrates enticed him into philosophy—so an ancient tradition goes—Plato was active for a time as a composer of tragedies and dithyrambs (Dionysian choral songs). If that is true, nothing of his work in those genres survives. Even apart from his sometimes very poetical prose, for example in Socrates' second speech of Phaedrus, *we do, however, have evidence of Plato's work as a poet. A number of "epigrams" attributed to him—poems suitable for inscription on a funerary monument or for other dedicatory purposes—survive in one or both of two collections of short Greek poems dating from medieval times, the "Palatine" and "Planudean" Anthologies. The edition of J. M. Edmonds, which we follow, prints seventeen poems from these sources, plus an eighteenth—in praise of the comic poet Aristophanes—that Olympiodorus (sixth century* A.D. *neo-Platonist philosopher) quotes as Plato's (as does Thomas Magister in his* Life of Aristophanes*). The first ten poems are also quoted as Plato's work in Diogenes Laertius' life of Plato, and many of the eighteen are quoted under Plato's name by one or more additional ancient authors. They are all in the form of elegiac couplets (a dactyllic hexameter, the meter of the Homeric epics, followed by a dactyllic pentameter), mostly a single couplet each (but numbers 4, 5, 7, 11, and 13 are double couplets, and 3 consists of three).*

The first two poems are addressed to a young man, as it seems a student of astronomy, named Astēr (or perhaps only affectionately so called by his admirer)—a Greek word for 'star'. Diogenes Laertius reports that the third was actually inscribed on the tomb at Syracuse of its dedicatee, Plato's friend and associate in Syracusan political affairs, Dion (prominent in so many of the Platonic Letters*). The* Anthologies *also give other attributions than to Plato in the case of some four of these poems, and Plato's authorship has reasonably been doubted in other cases as well. It is odd to find Plato in numbers 4 and 6 speaking in erotic terms of Agathon and Phaedrus as desirable youths—these are historical persons appearing as characters in Plato's dialogues on eros, but they were two decades Plato's senior; and one notes that the object of the poet's affection in number 8, Xanthippe, has the same name as Socrates' wife. Nonetheless, there seems no reason to doubt that some of these poems—above all number 3, and perhaps others, including especially 1, 2, and 7—are actually by him.*

For ease of identification we add for each poem (except the last) its position in Hermann Beckby's edition of the Anthologia Graeca *(Munich, 1957).*

J.M.C.

1

You gaze at the stars, my Star; would that I were Heaven, that I might look at you with many eyes!

Greek Anthology vii 669

2

Even as you shone once the Star of Morning among the living, so in death you shine now the Star of Evening among the dead.

Greek Anthology vii 670

3

The Fates decreed tears to Hecuba and the women of Troy right from their birth;[1] but for you, Dion, the gods spilled your widespread hopes upon the ground after you had triumphed in the doing of noble deeds. And so in your spacious homeland you lie honored by your fellow citizens, O Dion, you who made my heart mad with love.

Greek Anthology vii 99

4

Now, when I have but whispered that Alexis is beautiful, he is the observed of all observers. O my heart, why show dogs a bone? You'll be sorry for it afterwards: was it not so that we lost Phaedrus?

Greek Anthology vii 100

5

My mistress is Archeanassa of Colophon, on whose very wrinkles there is bitter love. Hapless are all you who met such beauty on its first voyage; through what a burning did you pass!

Greek Anthology vii 217

6

When I kiss Agathon my soul is on my lips, where it comes, poor thing, hoping to cross over.

Greek Anthology v 78

Translated by J. M. Edmonds, revised by John M. Cooper. Text: *Elegy and Iambus* (Harvard University Press, Loeb Classical Library, 1931), vol. II.

1. Reading *tote* in line 2.

7

I throw the apple at you, and if you are willing to love me, take it and share your girlhood with me; but if your thoughts are what I pray they are not, even then take it, and consider how short-lived is beauty.[2]

Greek Anthology v 79

8

I am an apple; one who loves you throws me at you. Say yes, Xanthippe; we fade, both you and I.

Greek Anthology v 80

9

We are Eretrians of Euboea,[3] but we lie near Susa, alas, how far from home!

Greek Anthology vii 259

10

A man who found some gold left a noose, and the one who did not find the gold he had left tied on the noose he found.

Greek Anthology ix 44

11

I, Laïs, who laughed so disdainfully at Greece and once kept a swarm of young lovers at my door, dedicate this mirror to the Paphian[4]—for I do not wish to see me as I am, and cannot see me as I was.

Greek Anthology vi 1

12

This man was pleasing to foreigners and dear to his fellow citizens—Pindar, servant of the melodious Muses.

Greek Anthology vii 35

2. The apple was dear to Aphrodite; to throw an apple at someone was to declare one's love; to catch and hold it, to show one's acceptance.

3. They were deported to Susa, King Darius' capital, by the Persians in 490 B.C. See also no. 13.

4. I.e., Aphrodite; the poem was inscribed on a mirror for dedication by Laïs to her.

13

We once left the sounding waves of the Aegean to lie here amidst the plains of Ecbatana. Fare thee well, renowned Eretria, our former country. Fare thee well, Athens, Euboea's neighbor. Fare thee well, dear Sea.

Greek Anthology vii 256

14

I am the tomb of a ship's captain; the tomb opposite is a farmer's: for beneath the land and beneath the sea is the same place of Death.

Greek Anthology vii 265

15

Sailors, be safe, by sea and on land; I would have you know that the tomb you pass is a shipwrecked man's.

Greek Anthology vii 269

16

Some say there are nine Muses. How thoughtless! Look at Sappho of Lesbos; she makes a tenth.

Greek Anthology ix 506

17

When Cypris saw Cypris at Cnidus, "Alas!" said she; "where did Praxiteles see me naked?"[5]

Greek Anthology xvi 162

18

The Graces, seeking for themselves a shrine that would not fall, found the soul of Aristophanes.

5. Cypris is Aphrodite, of whom there was a famous nude statue by Praxiteles at Cnidus.

PLATO

COMPLETE WORKS

EDITED BY JOHN M. COOPER

ASSOCIATE EDITOR D. S. HUTCHINSON

Outstanding translations by leading contemporary scholars—many commissioned especially for this volume—are presented here in the first single edition to include the entire surviving corpus of works attributed to Plato in antiquity. In his introductory essay, John Cooper gives an account of his presentation of these works, discusses questions surrounding the chronology of their composition, comments on the dialogue form in which Plato wrote, and offers guidance on approaching the reading and study of Plato's works. Also included are concise introductions by Cooper and Hutchinson to each translation, meticulous annotation, and a comprehensive index.

John M. Cooper is Stuart Professor of Philosophy at Princeton University.

D. S. Hutchinson is Professor of Philosophy and Fellow of Trinity College at the University of Toronto.
